14.15.610 Reasonable Use exemption
14.15.620 Non-conforming Structures
14.15.630 Non-conforming uses
14.15.640 Non-conforming Lots
14.15.650 Enforcement
Article I: Authority and Purpose

14.15.010 Shoreline Management Act

Washington State’s citizens voted to approve the Shoreline Management Act of 1971 in November 1972. The adoption of the Shoreline Management Act (Act) recognized “that the shorelines of the state are among the most valuable and fragile of its natural resources and that there is great concern throughout the state relating to their utilization, protection, restoration, and preservation” and that “coordinated planning is necessary in order to protect the public interest associated with the shorelines of the state while, at the same time, recognizing and protecting private property rights consistent with the public interest” (RCW 90.58.020). The Act seeks to foster all appropriate uses of the state’s shorelines; provide environmental protection for shorelines, preserve and enhance priority uses, including shoreline public access, and provide opportunity for substantial numbers of people to enjoy the shorelines of the state, consistent with appropriate environmental protection, encourage appropriate development that supports water-oriented uses.

Under the Act, shoreline master programs are created and implemented based on a “cooperative program of shoreline management between local government and the state” (RCW 90.58.050). The roles of local governments and the state are:

“Local government shall have the primary responsibility for initiating the planning required by this chapter and administering the regulatory program consistent with the policy and provisions of this chapter. The department [of Ecology] shall act primarily in a supportive and review capacity with an emphasis on providing assistance to local government and on insuring compliance with the policy and provisions of this chapter.” (RCW 90.58.050)

14.15.020 Authority

The Shoreline Management Act of 1971, Chapter 90.58 RCW, is the authority for the enactment and administration of this SMP.

14.15.030 Applicability

All proposed uses and development occurring within the shoreline jurisdiction must conform to Chapter 90.58 RCW, the Shoreline Management Act and this Program whether or not a permit is required.
14.15.040 Purpose and Intent

The purposes of this SMP are to:

A. To promote the public health, safety, and general welfare of the community by providing comprehensive policies and effective, reasonable regulations for development and use and protection of Okanogan County shorelines; and

B. Recognize and protect private property rights; and

C. Nothing in these regulations shall constitute authority of any person to trespass or in any way infringe upon private property or upon the rights of private ownership as guaranteed by the U. S. and State Constitutions, land deeds and abstracts.

D. Promote reasonable and appropriate use of the shorelines which will not jeopardize public and private interests; and

E. Protect rights of navigation; and

F. Preserve and protect fragile natural resources and cultural significant features; and

G. Increase public access to publicly owned areas of the shorelines where increased use levels are desirable; and

H. To manage shorelines in a positive, effective and equitable manner; and

I. To further assume and carry out the local government responsibilities established by the Act in RCW 90.58.050 including planning and administering the regulatory program consistent with the policy and provisions of the Act in RCW 90.58.020; and

J. To adopt and promote the following policy contained in RCW 90.58.020

The legislature declares that the interest of all of the people shall be paramount in the management of shorelines of statewide significance. The department, in adopting guidelines for shorelines of statewide significance, and local government, in developing master programs for shorelines of statewide significance, shall give preference to uses in the following order of preference which:

1. Recognize and protect the statewide interest over local interest;

2. Preserve the natural character of the shoreline;

3. Result in long term over short term benefit;

4. Protect the resources and ecology of the shoreline;

5. Increase public access to publicly owned areas of the shorelines;
68  6. Increase recreational opportunities for the public in the shoreline;
69  7. Provide for any other element as defined in RCW 90.58.100 deemed
70  appropriate or necessary.

14.15.050 Relationship to other Codes and Ordinances

A. All applicable federal, state, and local laws shall apply to properties in the
shoreline jurisdiction.

B. The goals and policies of this SMP approved under chapter 90.58 RCW shall be
considered an element of Okanogan County’s comprehensive plan. All other
portions of this SMP, including use regulations, shall be considered a part of
Okanogan County’s development regulations.

C. Where this Program makes reference to any RCW, WAC, or other state, or federal
law or regulation, the most recent amendment or current edition shall apply.

14.15.060 Liberal Construction

As provided for in RCW 90.58.900, the Act is exempted from the rule of strict
construction; the Act and this Program shall be liberally construed to give full
effect to the purposes, goals, objectives, and policies for which the Act and this
Program were enacted and adopted, respectively.

14.15.070 Severability

Shall any chapter, section, subsection, paragraph, sentence, clause or phrase of
this Program be declared unconstitutional or invalid for any reason, such decision
shall not affect the validity of the remaining portions of this Program.

14.15.080 Effective Date

This Program and all amendments thereto shall become effective immediately
upon final approval and adoption by the Department of Ecology.
14.15.090 Definitions

This chapter lists the official (legal) definitions of terms used in this SMP. As used in this SMP, unless the context requires otherwise, the following definitions and concepts apply:

A

1. “Accessory Building or Use” means a subordinate building or use which is located on the same legal lot as the principal building or use.

3. "Administrative Authority" shall, in the context of these regulations, mean the Okanogan County Office of Planning and Development; the city or town clerk for those incorporated municipalities listed in Section 2.00 of these regulations; or, the Tribal Planning Department within the exterior boundary of the Colville Indian Reservation.

4. “Administrator” shall, in the context of this master program, mean the duly appointed representative of the County, city, town or Tribe with jurisdiction.

5. “Advertising Sign” Any device, structure, fixture or placard that is visible from a public right-of-way or surrounding properties and which uses graphics, symbols or written copy for the purpose of advertising or identifying any establishment, product, goods or service.

6. “Agriculture” and “Agricultural Activities” means agricultural uses and practices including, but not limited to: Producing, breeding, or increasing agricultural products; rotating and changing agricultural crops; allowing land used for agricultural activities to lie fallow in which it is plowed and tilled but left unseeded; allowing land used for agricultural activities to lie dormant as a result of adverse agricultural market conditions; allowing land used for agricultural activities to lie dormant because the land is enrolled in a local, state, or federal conservation program, or the land is subject to a conservation easement; conducting agricultural operations; maintaining, repairing, and replacing agricultural equipment; maintaining, repairing, and replacing agricultural facilities, provided that the replacement facility is no closer to the shoreline than the original facility; and maintaining agricultural lands under production or cultivation;

7. “Agricultural Equipment” and “Agricultural Facilities” includes, but is not limited to:
   (i) The following used in agricultural operations: Equipment; machinery; constructed shelters, buildings, and ponds; fences; upland finfish rearing facilities; water diversion, withdrawal, conveyance, and use equipment and facilities including, but not limited to, pumps, pipes, tapes, canals, ditches, and drains; (ii) Corridors and facilities for transporting personnel, livestock, and equipment to, from, and within agricultural lands; (iii) Farm residences and associated equipment, lands, and facilities; and (iv) Roadside stands and on-farm markets for marketing fruit or vegetables.
8. “Agricultural Land” means those specific land areas on which agriculture activities are conducted as of the date of adoption of a local master program pursuant to these guidelines as evidenced by aerial photography or other documentation. After the effective date of the master program land converted to agricultural use is subject to compliance with the requirements of the master program.

9. “Agricultural Products” includes, but is not limited to, horticultural, viticultural, floricultural, vegetable, fruit, berry, grain, hops, hay, straw, turf, sod, seed, and apiary products; feed or forage for livestock; Christmas trees; hybrid cottonwood and similar hardwood trees grown as crops and harvested within twenty years of planting; and livestock including both the animals themselves and animal products including, but not limited to, meat, upland finfish, poultry and poultry products, and dairy products;

10. "Amendment" means a revision, update, addition, deletion, and/or reenactment to an existing shoreline master program.

11. "Animal feeding operation" or "AFO" means a lot or facility (other than an aquatic animal production facility) where the following conditions are met:

   A. Animals (other than aquatic animals) have been, are, or will be stabled or confined and fed or maintained for a total of 45 days or more in any 12-month period, and
   
   B. Crops, vegetation forage growth, or post-harvest residues are not sustained in the normal growing season over any portion of the lot or facility.

12. "Approval" means an official action by a local government legislative body agreeing to submit a proposed shoreline master program or amendments to the department for review and official action pursuant to this chapter; or an official action by the department to make a local government shoreline master program effective, thereby incorporating the approved shoreline master program or amendment into the state master program.

13. “Appurtenance” means development that is necessarily connected to the use and enjoyment of a single family residence and is located landward of the OHWM and/or the perimeter of a wetland. Appurtenances include a garage, deck, driveway, utilities, fences, installation of a septic tank and drain field, swimming pools, hot tubs, saunas, landscaping retaining walls outside Zone 1 buffer, and grading which does not exceed 250 cubic yards and which does not involve placement of fill in any wetland or waterward of the ordinary high water mark.

14. “Associated Wetlands” Wetlands that are in proximity to tidal waters, lakes, rivers or streams that are subject to the Act and either influence or are influenced by such waters. Factors used to determine proximity and influence include, but are not limited to: location contiguous to a shoreline waterbody, formation by tidally influenced geomorphic processes, presence of a surface connection including through a culvert or tide gate, location in part or whole within the floodplain of a shoreline, periodic inundation, and/or hydraulic continuity.
15. “Aquaculture” means the culture or farming of food fish, shellfish, or other aquatic plants or animals. Aquaculture is an activity of statewide interest. It is a water-dependent use and, when consistent with control of pollution and prevention of damage to the environment and undertaken in conformance with the provisions of this SMP, is a preferred use of the water area.

16. “Aquifer Recharge Area” Area with a critical recharging effect on aquifers used for potable water where an aquifer that is a source of drinking water is vulnerable to contamination that would effect the potability of the water.

17. “Archaeological resource/site” means archaeological and historic resources that are either recorded at the state historic preservation office and/or by local jurisdictions or have been inadvertently uncovered, are located on Okanogan County shorelands and including, but not limited to, submerged and submersible lands and the bed of the rivers sea within the state’s jurisdiction, that contains archaeological objects.

18. “Average Grade Level” means the average of the natural or existing topography of the portion of the lot, parcel, or tract of real property which will be directly under the proposed building or structure; provided that in the case of structures to be built over water, average grade level shall be the elevation of ordinary high water. Calculation of the average grade level shall be made by averaging the ground elevations at the center of all exterior walls of the proposed building or structure.

19. “Best management practices” means conservation practices or systems of practices and management measures that:

   A. Control soil loss and reduce water quality degradation caused by nutrients, animal waste, toxins, and sediment:

   B. Minimize adverse impacts to surface water and ground water flow, circulation pattern, and to the chemical, physical, and biological characteristics of waters, wetlands, and other fish and wildlife habitats.

   C. Control site runoff, spillage or leaks, sludge or water disposal, or drainage from raw material.

20. “Boating facilities” Developments and uses that support public access to shoreline waters for purposes of boating, including community docks serving more than 4 single family dwelling units, marinas, boat launches, and moorage.

21. “Boat launch ramp” means a structure constructed of concrete or other material, which extends waterward of the ordinary high-water mark.
4. “Buffer, Wetland” means the vegetation area adjacent to a wetland that separates and protects the wetland aquatic area from adverse impacts associated with adjacent land uses.

5. “Buffer, Zone 1” means the vegetation area adjacent to a shoreline that separates and protects the shoreline aquatic area from adverse impacts associated with adjacent land uses.

6. “Buffer, Zone 2” means an area that is contiguous to and protects a critical conservation area that is required for the continued maintenance, functioning, and/or structural stability of a critical conservation area.

7. “Building” Any permanent structure built for the shelter or enclosure of persons, animals, chattels, or property of any kind and not including advertising signboards or fences.

8. “Bulkhead” A solid wall erected generally parallel to and near the OHWM for the purpose of protecting adjacent uplands from waves or current action.

C

1. “CAFO” As defined by the Code of Federal Regulations 122.23.

2. "Channel migration zone (CMZ)" means the area along a river within which the channel(s) can be reasonably predicted to migrate over time as a result of natural and normally occurring hydrological and related processes when considered with the characteristics of the river and its surroundings.

3. “Clearing”. The destruction or removal of vegetation ground cover, shrubs and trees including, but not limited to, root material removal and/or topsoil removal.

4. “Commercial use” Facilities used or established to provide goods, merchandise or services for compensation or exchange, excluding facilities for the growth, production, or storage of agricultural products.

5. “Community boating facilities” including docks, piers, ramps, marinas, etc…are typically designed and constructed to serve all or a significant component of the members of a residential development; which typically include waterfront property owners and often include non-water front property owners.

6. “Community dock” means a dock intended for the common use of the residents of adjoining parcels or subdivision, shore subdivision, or community located on adjacent uplands.
7. "Conditional use" means a use, development, or substantial development which is classified as a conditional use or is not classified within the applicable master program;

8. "Critical Conservation Areas" Critical Conservation Areas include the following areas and ecosystems, as designated by the County, city, town or Tribe with jurisdiction: Wetlands, Critical Aquifer Recharge Areas, Geologically Hazardous Areas, Frequently Flooded Areas, and Fish and Wildlife Habitat Conservation Areas.

9. "Cumulative Impacts" means the impact on the environment resulting from the incremental impact of an action when added to other past, present, and reasonably foreseeable future actions regardless of who undertakes such other actions. Cumulative impacts can result from individually minor but collectively significant actions taking place over a period of time.

D

1. "Daylighting Streams” daylighting is the redirection of a stream into an above-ground channel. Typically, the goal is to restore a stream of water to a more natural state. Daylighting is intended to improve the riparian environment for a stream which had been previously diverted into a culvert, pipe, or a drainage system.

2. "Density" An expression of the intensity of use of property, usually indicated in the following manner: For residential uses: Minimum acreage or square footage required for each residential unit; for non-residential uses: Maximum amount of use and/or floor area expressed as a percentage or fraction of the size of the lot.

3. "Development" means a use consisting of the construction or exterior alteration of structures; dredging; drilling; dumping; filling; removal of any sand, gravel, or minerals; bulkheading; driving of piling; placing of obstructions; or any project of a permanent or temporary nature which interferes with the normal public use of the surface of the waters of the state subject to Chapter 90.58 RCW at any stage of water level. (RCW 90.58.030(3)(d).)

4. "Development regulations" means the controls placed on development or land uses by a local or tribal government in Okanogan County, including, but not limited to, zoning ordinances, critical areas ordinances, all portions of a shoreline master program other than goals and policies approved or adopted under chapter 90.58 RCW, planned unit development ordinances, subdivision ordinances, and binding site plan ordinances, together with any amendments thereto.

5. "Dike" an artificial embankment or revetment normally set back from the bank or channel in the floodplain for the purpose of keeping floodwaters from inundating adjacent land.
6. “Dock” means all platform structures or anchored devices in or floating upon water bodies to provide moorage for pleasure craft or landing for water-dependent recreation including but not limited to floats, swim floats, float plane moorages, and water ski jumps. Excluded are boat launch ramps.

   A. “Permanent dock” a dock that is over 120 square feet, usually attached with pilings.

   B. “Seasonal docks” a dock up to 120 square feet so designed and constructed in order that it may be removed on a seasonal basis.

   C. “Shared moorage facility” - Dock facilities that would include joint use and/or community dock facilities.

7. “Document of record” means the most current shoreline master program officially approved or adopted by rule by the department for a given local government jurisdiction, including any changes resulting from appeals filed pursuant to RCW 90.58.190.

8. “Dredge material disposal” means the disposal of material excavated waterward of the ordinary high watermark.

9. “Dredging” means the removal, displacement, and disposal of unconsolidated earth material such as silt, sand, gravel, or other submerged material from the bottom of water bodies or from wetlands.

10. "Dwelling, Single-Family" means a detached building containing one dwelling unit.

11. "Dwelling unit" means a building or portion thereof designed exclusively for residential purposes on a permanent basis; to be used, rented, leased, or hired out to be occupied for living purposes having independent living facilities, including permanent provisions for living, sleeping, eating, cooking, and sanitation. No motor home, travel trailer, tent trailer or other recreational vehicle shall be considered a dwelling unit.

1. "Ecological functions" or "shoreline functions" means the work performed or role played by the physical, chemical, and biological processes that contribute to the maintenance of the aquatic and terrestrial environments that constitute the shoreline's natural ecosystem. See WAC 173-26-201 (2)(c).
2. “Ecologically intact” shorelines, means those shoreline areas that retain the majority of their natural shoreline functions, as evidenced by the shoreline configuration and the presence of native vegetation. Generally, but not necessarily, ecologically intact shorelines are free of structural shoreline modifications, structures, and intensive human uses. In forested areas, they generally include native vegetation with diverse plant communities, multiple canopy layers, and the presence of large woody debris available for recruitment to adjacent water bodies.

3. “Ecological restoration” is an “intentional activity that initiates or accelerates the recovery of an ecosystem with respect to its health, integrity and sustainability. The practice of ecological restoration includes a wide scope of projects including, but not limited to: erosion control, reforestation, removal of non-native species and weeds, revegetation of disturbed areas, daylighting streams, reintroduction of native species, as well as habitat and range improvement for targeted species.

4. "Ecosystem-wide processes" means the suite of naturally occurring physical and geologic processes of erosion, transport, and deposition; and specific chemical processes that shape landforms within a specific shoreline ecosystem and determine both the types of habitat and the associated ecological functions.

5. An "emergency" is an unanticipated and imminent threat to public health, safety, or the environment which requires immediate action within a time too short to allow full compliance with this chapter. Emergency construction does not include development of new permanent protective structures where none previously existed. Where new protective structures are deemed by the administrator to be the appropriate means to address the emergency situation, upon abatement of the emergency situation the new structure shall be removed or any permit which would have been required, absent an emergency, pursuant to chapter 90.58 RCW, these regulations, or the local master program, obtained. All emergency construction shall be consistent with the policies of chapter 90.58 RCW and the local master program. As a general matter, flooding or other seasonal events that can be anticipated and may occur but that are not imminent are not an emergency;

6. “Emergency construction” is construed narrowly as that which is necessary to protect property from the elements (RCW 90.58.030(3eiii)).

7. "Erosion hazard areas" are those areas containing soils which, according to the United States Department of Agriculture Natural Resources Conservation Service Soil Survey Program, may experience significant erosion. Erosion hazard areas also include coastal erosion-prone areas and channel migration zones.

8. “Exempt substantial development” are those set forth in WAC 173-27-040 and RCW 90.58.030 (3)(e), 90.58.140(9), 90.58.147,90.58.355 , and 90.58.515 which are not required to obtain a substantial development permit but which must otherwise comply with applicable provisions of the act and the local master program.
9. “Experimental aquaculture” means an aquaculture project that uses methods or technologies that are unprecedented or unproven in the State of Washington.

1. “Fair Market Value” of a development is the expected price at which the development can be sold to a willing buyer. For developments which involve nonstructural operations such as dredging, dumping or filling, the fair market value is the expected cost of hiring a contractor to perform the operation or where no such a value can be calculated, the total of labor, equipment use, transportation, and other costs incurred for the duration of the permitting project.

2. "Feasible" means, for the purpose of this chapter, that an action, such as a development project, mitigation, or preservation requirement, meets all of the following conditions:

   A. The action can be accomplished with technologies and methods that have been used in the past in similar circumstances, or studies or tests have demonstrated in similar circumstances that such approaches are currently available and likely to achieve the intended results;

   B. The action provides a reasonable likelihood of achieving its intended purpose; and

   C. The action does not physically preclude achieving the project's primary intended legal use. In cases where this SMP requires certain actions unless they are infeasible, the burden of proving infeasibility is on the applicant. In determining an action's infeasibility, the local or tribal government reviewing the application may weigh the action's relative public costs and public benefits, considered in the short- and long-term time frames.

3. “Feedlot” A feedlot shall be an enclosure or facility used or capable of being used for feeding livestock hay, grain, silage, or other livestock feed, but shall not include land for growing crops or vegetation for livestock feeding and/or grazing, nor shall it include normal livestock wintering.

4. "Fill" means the addition of soil, sand, rock, gravel, sediment, earth retaining structure, or other material to an area waterward of the OHWM, in wetlands, or on shorelands in a manner that raises the elevation or creates dry land.
5. "Fish and wildlife habitat conservation areas" are areas that serve a critical role in sustaining needed habitats and species for the functional integrity of the ecosystem, and which, if altered, may reduce the likelihood that the species will persist over the long term. These areas may include, but are not limited to, rare or vulnerable ecological systems, communities, and habitat or habitat elements including seasonal ranges, breeding habitat, winter range, and movement corridors; and areas with high relative population density or species richness. Counties and cities may also designate locally important habitats and species.

6. “Floating homes” A structure designed and operated substantially as a permanently based over water residence. Floating homes are not vessels and typically lack adequate self-propulsion and steering equipment to operate as a vessel. They are typically served by permanent utilities and semi permanent anchorage/moorage facilities.

7. “Floats” means a detached, anchored structure that is free to rise and fall with water levels including any floating, anchored platform or similar structure, used for boat mooring, swimming or similar recreational activities that is not anchored or accessed directly from the shoreline.

8. "Floodplain" is synonymous with one hundred-year floodplain and means that land area susceptible to inundation with a one percent chance of being equaled or exceeded in any given year. The limit of this area shall be based upon the flood ordinance regulation maps of the local or tribal government with jurisdiction.

9. “Floodplain management” means a long-term program to reduce flood damages to life and property and to minimize public expenses due to floods through a comprehensive system of planning, development regulations, building standards, structural works, and monitoring and warning systems.

10. "Floodway" means that area either established in the federal emergency management agency flood insurance rate maps or floodway maps; or those portions of the area of a river valley lying streamward from the outer limits of a watercourse upon which flood waters are carried during periods of flooding that occur with reasonable regularity, although not necessarily annually, said floodway being identified, under normal condition, by changes in surface soil conditions or changes in types or quality of vegetative ground cover condition. Regardless of the method used to identify the floodway, the floodway shall not include those lands that can reasonably be expected to be protected from flood waters by flood control devices maintained by or maintained under license from the federal government, the state, or a political subdivision of the state.
"Forest land" is land primarily devoted to growing trees for long-term commercial timber production on land that can be economically and practically managed for such production, including Christmas trees subject to the excise tax imposed under RCW 84.33.100 through 84.33.140, and that has long-term commercial significance. These lands are referred to in this chapter as forest resource lands to distinguish between formally designated lands, and other lands used for forestry purposes.

"Forest practices" means any activity conducted on or directly pertaining to forest land and relating to growing, harvesting, or processing timber, including but not limited to: road and trail construction, harvesting, final and intermediate, precommercial thinning, reforestation, fertilization, prevention and suppression of diseases and insects, salvage of trees, and brush control. "Forest practice" shall not include: Forest species seed orchard operations and intensive forest nursery operations; or preparatory work such as tree marking, surveying and road flagging; or removal or harvest of incidental vegetation from forest lands such as berries, ferns, greenery, mistletoe, herbs, mushrooms, and other products which cannot normally be expected to result in damage to forest soils, timber or public resources.

"Frequently flooded areas" are lands in the flood plain subject to at least a one percent or greater chance of flooding in any given year, or within areas subject to flooding due to high groundwater. These areas include, but are not limited to, streams, rivers, lakes, coastal areas, wetlands, and areas where high groundwater forms ponds on the ground surface.

"Frontage" is the distance measured along the ordinary high water mark.

"Geologically hazardous areas" are areas that because of their susceptibility to erosion, sliding, earthquake, or other geological events, are not suited to siting commercial, residential, or industrial development consistent with public health or safety concerns. Any area meeting the definition of “Geological Hazardous Area” including the following:

A. Channel migration zones;

B. Erosion hazard areas: areas containing soils which, according to the United States Department of Agriculture Natural Resources Conservation Service Soil Survey Program, may experience significant erosion. Erosion hazard areas also include coastal erosion-prone areas and channel migration zones.
C. Landslide hazard areas: areas that have the potential of risk of mass movement resulting from a combination of geologic, topographic, and hydrologic factors; They include any areas susceptible to landslide because of any combination of bedrock, soil, slope (gradient), slope aspect, structure, hydrology, or other factors, and include, at a minimum, the following:

i. Areas of historic failures, such as:
   (a) Those areas delineated by the United States Department of Agriculture Natural Resources Conservation Service as having a significant limitation for building site development;
   (b) Those coastal areas mapped as class u (unstable), uos (unstable old slides), and urs (unstable recent slides) in the department of ecology Washington coastal atlas; or
   (c) Areas designated as quaternary slumps, earthflows, mudflows, lahars, or landslides on maps published by the United States Geological Survey or Washington department of natural resources.

ii. Areas with all three of the following characteristics:
   (a) Slopes steeper than fifteen percent;
   (b) Hillsides intersecting geologic contacts with a relatively permeable sediment overlying a relatively impermeable sediment or bedrock; and
   (c) Springs or groundwater seepage.

iii. Areas that have shown movement during the holocene epoch (from ten thousand years ago to the present) or which are underlain or covered by mass wastage debris of this epoch;

iv. Slopes that are parallel or subparallel to planes of weakness (such as bedding planes, joint systems, and fault planes) in subsurface materials;

v. Slopes having gradients steeper than eighty percent subject to rockfall during seismic shaking;

vi. Areas potentially unstable as a result of rapid stream incision, stream bank erosion, and undercutting by wave action, including stream channel migration zones;

vii. Areas that show evidence of, or are at risk from snow avalanches;

viii. Areas located in a canyon or on an active alluvial fan, presently or potentially subject to inundation by debris flows or catastrophic flooding; and

ix. Any area with a slope of forty percent or steeper and with a vertical relief of ten or more feet except areas composed of bedrock. A slope is delineated by establishing its toe and top and measured by averaging the inclination over at least ten feet of vertical relief.
D. Seismic hazard areas: areas that are subject to severe risk of damage as a result of earthquake-induced ground shaking, slope failure, settlement, or soil liquefaction. Seismic hazard areas must include areas subject to severe risk of damage as a result of earthquake induced ground shaking, slope failure, settlement or subsidence, soil liquefaction, surface faulting, or tsunamis.

Settlement and soil liquefaction conditions occur in areas underlain by cohesionless soils of low density, typically in association with a shallow groundwater table. One indicator of potential for future earthquake damage is a record of earthquake damage in the past. Ground shaking is the primary cause of earthquake damage in Washington, and ground settlement may occur with shaking. The strength of ground shaking is primarily affected by:

i. The magnitude of the earthquake;
ii. The distance from the source of an earthquake;
iii. The type or thickness of geologic materials at the surface; and
iv. The type of subsurface geologic structure.

E. Mine hazard areas: areas that are directly underlain by, adjacent to, or affected by mine workings such as adits, tunnels, drifts, or air shafts;

F. Volcanic hazard areas: areas subject to pyroclastic flows, lava flows, and inundation by debris flows, mud flows, or related flooding resulting from volcanic activity.

2. "Geotechnical report" or "geotechnical analysis" means a scientific study or evaluation conducted by a qualified expert that includes a description of the ground and surface hydrology and geology, the affected land form and its susceptibility to mass wasting, erosion, and other geologic hazards or processes, conclusions and recommendations regarding the effect of the proposed development on geologic conditions, the adequacy of the site to be developed, the impacts of the proposed development, alternative approaches to the proposed development, and measures to mitigate potential site-specific and cumulative geological and hydrological impacts of the proposed development, including the potential adverse impacts to adjacent and down-current properties. Geotechnical reports shall conform to accepted technical standards and must be prepared by qualified professional engineers or geologists-who have professional expertise about the regional and local shoreline geology and processes.

3. "Grading" means the movement or redistribution of the soil, sand, rock, gravel, sediment, or other material on a site in a manner that alters the natural contour of the land.
4. "Guidelines" means those standards adopted by the department to implement the policy of chapter 90.58 RCW for regulation of use of the shorelines of the state prior to adoption of master programs. Such standards shall also provide criteria for local governments and the department in developing and amending master programs.

H

1. “Habitat” means the specific area or environment in which a particular type of plant or animal lives.

2. “Hard shoreline stabilization” means shore erosion control practices using hardened structures that armor and stabilize the shoreline landward of the structure from further erosion including but not limited to, bulkheads, rip-rap, jetties, groins, breakwaters, and stone reinforcement.

3. “Height, building” is measured from average grade level to the highest point of a structure: Provided, That television antennas, chimneys, and similar appurtenances shall not be used in calculating height, except where such appurtenances obstruct the view of the shoreline of a substantial number of residences on areas adjoining such shorelines, or the applicable master program specifically requires that such appurtenances be included: Provided further, That temporary construction equipment is excluded in this calculation;

4. “Historic Site” means those sites that are eligible or listed on the Washington Heritage Register, National Register of Historic Places, or any locally developed historic registry formally adopted by the responsible local government.

5. “Houseboat” A vessel, principally used as an over water residence. Houseboats are licensed and designed for use as a mobile structure with detachable utilities or facilities, anchoring and the presence of adequate self-propulsion and steering equipment to operate as a vessel. Principal use as an over-water residence means the occupant resides on the vessel in a specific location, and/or in the same area on more than a total of thirty days in any forty-day period or on more than a total of ninety days in any three hundred sixty-five-day period. "In the same area" means within a radius of one mile of any location where the same vessel previously moored or anchored on state-owned aquatic lands. This definition includes liveaboard vessels.

I

1. “Industrial use” means a use including manufacturing, processing, warehousing, storage, distribution, shipping and other related uses.
2. "In-stream Structure" means a structure placed by humans within a stream or river waterward of the ordinary high-water mark that either causes or has the potential to cause water impoundment or the diversion, obstruction, or modification of water flow. In-stream structures may include those for hydroelectric generation, irrigation, water supply, flood control, transportation, utility service transmission, fish habitat enhancement, or other purpose.

L

1. “Landfill” see fill

2. “Land Use, High Impact” “High Intensity Land Use” means land use that includes the following uses or activities: commercial, urban, industrial, institutional, retail sales, residential (more than 1 unit/acre), high intensity new agriculture (dairies, nurseries, greenhouses, raising and harvesting crops requiring annual tilling, raising and maintaining animals), high intensity recreation (golf courses, ball fields), and hobby farms.

3. “Land Use, Low Impact” means land use that includes the following uses or activities, forestry (cutting of trees only), low-intensity open space (hiking, bird-watching, preservation of natural resources, etc.), unpaved trails, utility corridor without a maintenance road and little or no vegetation management.

4. “Land Use Medium Impact” means land use that includes the following uses or activities, residential (1 unit/acre or less), moderate-intensity open space (parks with biking, jogging, etc.), conversion to moderate-intensity agriculture (orchards, hay fields, etc.), paved trails, building of logging roads, utility corridor or right-of-way shared by several utilities and including access/maintenance road.

5. “Large Woody Debris” or “LWD” means all wood greater than four inches (4”) in diameter naturally occurring or artificially placed in streams, including, branches, stumps, logs and logjams.

6. “Litter container” means a container provided on public or private property for temporary disposal of wastepaper, used beverage or food containers, and other small articles of rubbish, trash, or garbage by users of the site. Every litter container shall be closed with a well-fitting lid or designed to reasonably prevent its contents from becoming litter.

7. "Local Government" means any county, incorporated city or town or Tribal corporation which contains within its boundaries any lands or waters subject to the Shoreline Management Act.

8. “Lot Coverage” is the percentage of the parcel within shoreline jurisdiction, less the required Zone 1 and Zone 2 buffers, to be covered with impervious surfaces.
1. “May” means an action is acceptable, provided it conforms to the provisions of this SMP.

2. “Must” means an action is required.

3. “Marina” means a facility which provides boat launching, storage, supplies and services for small pleasure craft. There are two basic types of Marinas: open type construction (floating breakwater and/or open pile work) and solid type construction (bulkhead and/or landfill).

4. “Mineral extraction” means the removal of topsoil, gravel, rock, clay, sand or other earth material, including accessory activities such as washing, sorting, screening, crushing and stockpiling. Not included is the leveling, grading, filling, or removal of materials during the course of normal site preparation for an approved use (e.g., residential subdivision, commercial development, etc.) subject to the provisions of this Program.

5. “Mineral prospecting” Mineral prospect(-ing) – To excavate, process, or classify aggregate using hand-held mineral prospecting tools and mineral prospecting equipment.

6. “Mining” The act of extracting from the earth minerals and/or ores via open pit, shaft, leaching, hydraulic, or other methods, except dredging and sand and gravel. Note that mining activities are subject to zoning regulation and approval processes; however, prospecting and exploration activities that are conducted with minimal disturbance of the subject property are not considered mining and are not restricted by zoning. Surface mining operations are also regulated by Department of Natural Resources.

7. “Mitigation” means avoiding, minimizing, rectifying, reducing, compensating for, and/or monitoring an impact as defined in Washington State’s SEPA rules, 197-11-768 WAC.

8. “Mixed use development” means a combination of uses within the same building or site as a part of an integrated development project with functional interrelationships and coherent physical design. Mixed use developments, which incorporate non-water oriented uses, must include water dependent use(s), except commercial uses complying with WAC 173-26-241(3)(d).
9. “Monitoring” means evaluating the impacts of development on the environment (which may include biology, geology, hydrology, hydraulics, and other factors related to safety and shoreline ecological function) and determining how well any required mitigation measures are functioning through the monitoring period. Monitoring may also include collection and analysis of data by various methods for the purpose of understanding and documenting changes in natural ecosystems and features; and does also include gathering baseline data.

10. “Multi-family dwelling (residence)” means a single building, or portion thereof, designed for or occupied by three (3) or more families living independently of each other in separate dwelling units on one lot of record and, for the purpose of this code, includes triplexes, fourplexes, apartment buildings, and residential condominiums.

11. “Municipal uses” are those in support of local government functions and services. For the purposes of this SMP, recreational uses and utility facilities are excluded.

N

1. "Natural or existing topography" means the topography of the lot, parcel, or tract of real property immediately prior to any site preparation or grading, including excavation or filling;

2. “Navigable waters of the United States” means a water body that in its ordinary condition, or by being united with other water bodies, forms a continued route over which commerce is or may be carried on with other states or foreign countries in the customary modes in which such commerce is conducted by water.

3. “Nonconforming lot” a lot which was lawful prior to the adoption, revision, or amendment of the SMP, but which fails, by reason of such adoption, revision or amendment, to conform to the current requirements of the SMP.

4. “Nonconforming Structure” a building or structure which was lawful prior to the adoption, revision, or amendment of the SMP, but which fails, by reason of such adoption, revision or amendment, to conform to the current requirements of the SMP.

5. “Nonconforming Use” a use of the land which was lawful prior to the adoption, revision, or amendment of the SMP, but which fails, by reason of such adoption, revision, or amendment, to conform to the current requirements of the SMP.

6. “Non-structural shoreline stabilization” includes building setbacks, and planning and regulatory measures to avoid the need for structural stabilization, vegetation stabilization and bioengineered stabilization.

7. “Non-water-oriented use” means a use that is not a water-dependent, water-related, or water-enjoyment use.

2. “Official Map of Shorelines” means all maps adopted as part of the Master Program delineating the approximate geographic boundaries of all designated water bodies of Okanogan County, coming under the jurisdiction of the Shoreline Management Act of 1971. Streams and Lakes are naturally fluctuating systems and are not static, therefore, the actual boundaries of the shoreline jurisdiction are determined on the ground at the time of application using the definition of “Shoreline Jurisdiction” found in RCW 90.58.030(2).

3. “Open Space, Common” Land within or related to a development, not individually owned (undivided interest), which remains undeveloped (except for approved trails and accessory structures as allowed by this SMP and approved by the Dept. of Fish and Wildlife) and that is dedicated to one or more of the following purpose: Historical/architectural preservation and/or wildlife habitat and/or recreation.

4. “Open Space, Conservation” Land retained in an open or unimproved condition, which has been set aside, dedicated, designated, or reserved for fish and wildlife preservation or enhancement purposes. Mechanisms for preservation of Conservation Open Space include but are not limited to: Subdivision, Planned Development (PD), or Planned Destination Resort (PDR) process. Lands within this type of an open space dedication may include portions and combinations of forest, agricultural and grazing lands, priority fish and wildlife habitats, on-site watersheds, 100 year floodplains, county shorelines or shorelines of state-wide significance and riparian areas and wetlands. Land so designated shall not include areas of human impact and shall contain no structures or impervious surfaces other than those which are approved by the Administrator e.g., part of an organized trail system, structure approved by the Dept. of Fish and Wildlife, and structures of historical/architectural preservation significance or used as designated Conservation open space.

5. “Open space, Individual Ownership” Land within or related to a development owned individually, which remains undeveloped (except for trails) and that is dedicated for use in the development and is retained or restored to its native state or used for agricultural or recreational purposes as allowed by this SMP, e.g., part of an organized trail system, structure approved by the Dept. of Fish and Wildlife, and structures of historical/ architectural preservation significance or used as designated wildlife open space.

6. “Open Space, Public” Any land which has been acquired, set aside, dedicated, designated or reserved for general public use or enjoyment.
7. “Ordinary high water mark” on all lakes, streams, and tidal water is that mark that will be found by examining the bed and banks and ascertaining where the presence and action of waters are so common and usual, and so long continued in all ordinary years, as to mark upon the soil a character distinct from that of the abutting upland, in respect to vegetation as that condition exists on June 1, 1971, as it may naturally change thereafter, or as it may change thereafter in accordance with permits issued by a local government or the department: PROVIDED, That in any area where the ordinary high water mark cannot be found, the ordinary high water mark adjoining salt water shall be the line of mean higher high tide and the ordinary high water mark adjoining fresh water shall be the line of mean high water.

8. “Over-water structures” Any structure located waterward of the OHWM. Common examples include, but are not limited to, residential piers, marinas, and bridges.

9. "Party of record" includes all persons, agencies or organizations who have submitted written comments in response to a notice of application; made oral comments in a formal public hearing conducted on the application; or notified local government of their desire to receive a copy of the final decision on a permit and who have provided an address for delivery of such notice by mail;

10. “Permit” means any form of permission required under the act or this shoreline master program, or the Colville Tribes Shoreline Management Plan, prior to undertaking activity on shorelines of the state, including substantial development permits, variances, conditional use permits, permits for oil or natural gas exploration activities, permission which may be required for selective commercial timber harvesting, and shoreline exemptions.

11. "Person" means an individual, partnership, corporation, association, organization, cooperative, public or municipal corporation, or agency of the state or local governmental unit however designated.

12. “Placer mining” the mining (by panning or dredging) of alluvial (waterborne) or glacial deposits of precious metals or minerals, usually in stream beds or valleys adjacent to uplands rich in these minerals.

13. “Pier” means a fixed platform above the water, perpendicular to the shoreline.

14. “Primary utilities” are transmission, collection, production, or treatment facilities that are generally regional or area wide in scope and provide the primary service to a large area and may or may not be connected directly to the uses along the shoreline. Utilities include primary transmission facilities related to a hydropower and communications, and distribution or collection systems for water, sewer mains, gas and oil pipelines, and wastewater and water treatment plants.

P
15. “Priority Habitat” means a habitat type with unique or significant value to one or more species. An area classified and mapped as priority habitat must have one or more of the following attributes:

A. Comparatively high fish or wildlife density;
B. Comparatively high fish or wildlife species diversity;
C. Fish spawning habitat;
D. Important wildlife habitat;
E. Important fish or wildlife seasonal range;
F. Important fish or wildlife movement corridor;
G. Rearing and foraging habitat;
H. Important marine mammal haul-out;
I. Refugia habitat;
J. Limited availability;
K. High vulnerability to habitat alteration;
L. Unique or dependent species; or
M. Shellfish bed.

A priority habitat may be described by a unique vegetation type or by a dominant plant species that is of primary importance to fish and wildlife (such as oak woodlands or eelgrass meadows). A priority habitat may also be described by a successional stage (such as, old growth and mature forests). Alternatively, a priority habitat may consist of a specific habitat element (such as a consolidated marine/estuarine shoreline, talus slopes, caves, snags) of key value to fish and wildlife. A priority habitat may contain priority and/or nonpriority fish and wildlife.
"Priority Species" means a species requiring protective measures and/or management guidelines to ensure its persistence at genetically viable population levels. Priority species are those that meet any of the criteria listed below.

A. Criterion 1. State-listed or state proposed species. State-listed species are those native fish and wildlife species legally designated as endangered (WAC 232-12-014), threatened (WAC 232-12-011), or sensitive (WAC 232-12-011). State proposed species are those fish and wildlife species that will be reviewed by the department of fish and wildlife (POL-M-6001) for possible listing as endangered, threatened, or sensitive according to the process and criteria defined in WAC 232-12-297.

B. Criterion 2. Vulnerable aggregations. Vulnerable aggregations include those species or groups of animals susceptible to significant population declines, within a specific area or statewide, by virtue of their inclination to congregate. Examples include heron colonies, seabird concentrations, and marine mammal congregations.

C. Criterion 3. Species of recreational, commercial, and/or tribal importance. Native and nonnative fish, shellfish, and wildlife species of recreational or commercial importance and recognized species used for tribal ceremonial and subsistence purposes that are vulnerable to habitat loss or degradation.

D. Criterion 4. Species listed under the federal Endangered Species Act as either proposed, threatened, or endangered.

"Provisions" means policies, regulations, standards, guideline criteria or environment designations.

"Public Access" means the public's right to get to and use the State's public waters the water/land interface and associated shoreline area. It includes physical access that is either lateral (areas paralleling the shore) or perpendicular (an easement or public corridor to the shore), and/or visual access facilitated by means such as scenic roads and overlooks, viewing towers and other public sites or facilities.

“Qualified professional” means a person with experience and training in the pertinent scientific discipline, and who is a qualified scientific expert with expertise appropriate for the relevant critical conservation area subject in accordance with WAC 365-195-905(4). A qualified professional will have obtained a B.S. or B.A. or equivalent degree in biology, engineering, environmental studies, fisheries, geomorphology or related field, and have at least two years of related work experience. A geologist must have a state license.
1. “Recreation, low-intensity” means recreation that does not require developed facilities other than un-improved trails and can be accommodated without change to the area or resource other than development of trails and placement of litter containers and directional and interpretive signs. Examples are hiking, shore fishing, and bicycling.

2. “Recreation, high-intensity” means uses with specially built facilities, or occurs in such density or form that it requires or results in a modification of the area of resource. Campgrounds, golf courses, public beaches, and marinas are examples of high-intensity recreation.

3. “Recreational development” “Recreational Development” means the modification of the natural or existing environment to accommodate recreation. This includes clearing land, earth modifications, structures and other facilities such as parks, camps, camping clubs, launch ramps, golf courses, viewpoints, trails, public access facilities, public parks and athletic fields, hunting blinds, wildlife enhancement (wildlife ponds are considered excavation), and other low intensity use outdoor recreation areas.

4. “Recreational uses” Uses which offer activities, pastimes, and experiences that allow for the refreshment of mind and body. Examples include, but are not limited to, parks, camps, camping clubs, launch ramps, golf courses, viewpoints, trails, public access facilities, public parks and athletic fields, hunting blinds, and other low intensity use outdoor recreation areas. Recreational Uses that do not require a shoreline location, nor are related to the water, nor provide significant public access are considered nonwater-oriented. For example, a recreation uses solely offering indoor activities would be considered nonwater-oriented.

5. “Recreational Vehicle (RV) Park” A tract of land developed with individual sites for rent and containing roads and utilities to accommodate recreational vehicles or tent campers for vacation or other similar short stay purposes.

6. “Residential development” means one or more buildings, structures or portions thereof that are designed and used as a place for human habitation. Included are single, duplex or multi-family dwellings, apartment/condominium buildings, mobile homes, short/long subdivisions of land and other structures that serve to house people.

7. "Responsible Official" shall mean the duly elected County Commissioners of Okanogan County, or the Shoreline Administrator within the County.

8. "Restore," “restoration” or "ecological restoration" means the reestablishment or upgrading of impaired ecological shoreline processes or functions. This may be accomplished through measures including, but not limited to, revegetation, removal of intrusive shoreline structures and removal or treatment of toxic materials. Restoration does not imply a requirement for returning the shoreline area to aboriginal or pre-European settlement conditions.
9. “Riparian Areas” are transitional between terrestrial and aquatic ecosystems and are distinguished by gradients in biophysical conditions, ecological processes, and biota. They are areas through which surface and sub-surface hydrology connect water bodies with their adjacent uplands. They include those portions of terrestrial ecosystems that significantly influence exchanges of energy and matter with aquatic ecosystems (i.e., a zone of influence). Riparian areas are adjacent to perennial, intermittent, and ephemeral steams, lakes, and estuarine-marine shorelines.

10. “Riprap” means broken stone or other hardening material placed along the shoreline of a lake, river, or stream to prevent erosion or provide stability.

S

1. “Sanitary landfill” means a disposal facility or part of a facility at which solid waste is permanently placed in or on land and which is not a land spreading disposal facility.

2. “Seasonal” A temporary use the duration of which is related to an identifiable climatic, cultural, or recreational period. (i.e., summer, winter, fall, spring, Christmas, ski season).

3. “Setback” means the required minimum distance between the landward limit of the shoreline area or, where relevant, any other lot or property line, and the outer-most vertical plane of any building, structure, device, fence, swimming pool, landscaped or graded area, or other improvement causing a disturbance to the natural landscape.

4. "Shall" means a mandate; the action must be done.

5. "Shorelands" or "shoreland areas" means those lands extending landward for two hundred feet in all directions as measured on a horizontal plane from the ordinary high water mark; floodways and contiguous floodplain areas landward two hundred feet from such floodways; and all wetlands and river deltas associated with the streams, lakes, and tidal waters which are subject to the provisions of this chapter; the same to be designated as to location by the department of ecology.

6. “Shoreline Administrator” means the Director of Planning & Development Department or staff member designated by the Director to perform and review functions required in this program.

7. "Shorelines" means all of the water areas of the state, including reservoirs, and their associated shorelands, together with the lands underlying them; except

A. Shorelines of statewide significance;

B. Shorelines on segments of streams upstream of a point where the mean annual flow is twenty cubic feet per second or less and the wetlands associated with such upstream segments; and (iii) shorelines on lakes less than twenty acres in size and wetlands associated with such small lakes;
8. “Shoreline ecological function” see “Ecological function”

9. “Shoreline frontage” means the land that lies adjacent to the lake, river, or stream subject to this program.

10. “Shoreline Jurisdiction or “Shoreline Area” means all “shorelines of the state” and “shorelands” as defined in RCW 90.58.030.
11. "Shoreline Master Program" or "SMP" means the comprehensive use plan for the shoreline area of a jurisdiction subject to this title, and the use regulations together with maps, diagrams, charts, or other descriptive material and text, a statement of desired goals, and standards developed in accordance with the policies enunciated in RCW 90.58.

12. "Shoreline Modifications" means those actions that modify the physical configuration or qualities of the shoreline area, usually through the construction of a physical element such as a dike, breakwater, pier, weir, dredged basin, fill, bulkhead, or other shoreline structure. They can include other actions, such as clearing, grading, or application of chemicals.

13. “Shoreline permit” means a shoreline substantial development permit, a shoreline conditional use, or a shoreline variance, or any combination thereof issued by Okanogan County, Brewster, Pateros, Omak, Okanogan, Twisp, Winthrop, and Oroville, and Tonasket pursuant to RCW 90.58.

14. "Shorelines of the State" are the total of all "shorelines" and "shorelines of state-wide significance" within the state.

15. "Shorelines of State-wide Significance" in Okanogan County means:
   A. Those lakes, whether natural, artificial or a combination thereof with a surface acreage of one thousand acres or more measured from the ordinary high-water mark.
   B. Those natural rivers or segments thereof that are downstream of a point where the mean annual flow is measured at two hundred cubic feet per second or more, or those portions of rivers downstream from the first three hundred square miles of drainage area, whichever is longer.
   C. Those wetlands and shorelands associated with such water bodies.

16. “Shoreline of Tribal Significance” means any Shoreline Area within the Colville Indian Reservation.

17. “Short Subdivision” means the division or redivision of land into four or fewer lots, tracts, parcels, sites or divisions for the purpose of sale, lease, or transfer of ownership, including any remaining portion of the parent parcel for any lot created through the use of OCC 16.04.070(B). (Ord 95-7 § 1,1995)

18. “Should” means that the particular action is required unless there is a demonstrated, compelling reason, based on policy of the Shoreline Management Act and this chapter, against taking the action.
19. "Significant vegetation removal" means the removal or alteration of trees, shrubs, and/or ground cover by clearing, grading, cutting, burning, chemical means, or other activity that causes significant ecological impacts to functions provided by such vegetation. The removal of invasive or noxious weeds does not constitute significant vegetation removal. Tree pruning, not including tree topping, where it does not affect ecological functions, does not constitute significant vegetation removal.

20. “Soft shoreline stabilization” means shore erosion control and restoration practices using only plantings or organic materials to restore, protect or enhance the natural shoreline environment.

21. “Solid Waste” means all putrescible and nonputrescible solid and semisolid wastes, including but not limited to garbage, rubbish, ashes, industrial wastes, swill, demolition and construction wastes, abandoned vehicles or parts thereof, and discarded commodities. This includes all liquid, solid and semisolid, materials which are not the primary products of public, private, industrial, commercial, mining, and agricultural operations. Solid waste includes but is not limited to sludge from wastewater treatment plants and septage, from septic tanks, woodwaste, dangerous waste, and problem wastes.

22. “Structural shoreline stabilization” means shore erosion control practices using hardened structures that armor and stabilize the shoreline landward of the structure from further erosion, examples include, bulkheads, concrete walls, rip-rap, jetties, groins, breakwaters, stone reinforcement.

23. “Structure” Anything constructed in the ground, or anything erected which requires location on the ground or water, or is attached to something having location on or in the ground, but not including fences or paved areas, or standard roof mounted antennas.

24. "Subdivision" division or redivision of land into five or more lots, tracts, parcels, sites or divisions for the purpose of sale, lease or transfer of ownership including any remaining portions of the parent parcel. (Ord. 95-7 § 1, 1995).

25. “Substantial accessory use facilities” Substantial accessory including but not limited to rest rooms, recreation halls and gymnasiums, commercial services, access roads, and parking areas associated with recreational development.
26. "Substantial development" shall mean any development of which the total cost or fair market value exceeds five thousand seven hundred eighteen dollars ($5,718) or the dollar value as amended by the State of Washington Office of Financial Management, or any development which materially interferes with the normal public use of the water or shorelines of the state. The dollar threshold established in this subsection (3)(e) must be adjusted for inflation by the office of financial management every five years, beginning July 1, 2007, based upon changes in the consumer price index during that time period. "Consumer price index" means, for any calendar year, that year's annual average consumer price index, Seattle, Washington area, for urban wage earners and clerical workers, all items, compiled by the bureau of labor and statistics, United States department of labor. The office of financial management must calculate the new dollar threshold and transmit it to the office of the code reviser for publication in the Washington State Register at least one month before the new dollar threshold is to take effect. The uses and activities listed below shall not be considered substantial developments for the purpose of this chapter. All development, including the uses and activities listed below, is subject to Tribal Historic and Cultural Office regulations in accordance with the Tribal Cultural Artifacts Code.

   A. Normal maintenance or repair of existing structures or developments, including damage by accident, fire, or elements;
   B. Construction of the normal protective bulkhead common to single family residences;
   C. Emergency construction necessary to protect property from damage by the elements;
   D. Construction and practices normal or necessary for farming, irrigation, and ranching activities, including agricultural service roads and utilities on shorelands, and the construction and maintenance of irrigation structures including but not limited to head gates, pumping facilities, and irrigation channels. A feedlot of any size, all processing plants, other activities of a commercial nature, alteration of the contour of the shorelands by leveling or filling other than that which results from normal cultivation, shall not be considered normal or necessary farming or ranching activities. A feedlot shall be an enclosure or facility used or capable of being used for feeding livestock hay, grain, silage, or other livestock feed, but shall not include land for growing crops or vegetation for livestock feeding and/or grazing, nor shall it include normal livestock wintering operations;
   E. Construction or modification of navigational aids such as channel markers and anchor buoys;
   F. Construction on shorelands by an owner, lessee, or contract purchaser of a single family residence for his own use or for the use of his or her family, which residence does not exceed a height of thirty-five feet above average grade level and which meets all requirements of the state agency or local government having jurisdiction thereof, other than requirements imposed pursuant to this chapter;
G. Construction of a dock, including a community dock, designed for pleasure craft only, for the private noncommercial use of the owner, lessee, or contract purchaser of single and multiple family residences. This exception applies if the fair market value of the dock does not exceed ten thousand dollars, but if subsequent construction having a fair market value exceeding two thousand five hundred dollars occurs within five years of completion of the prior construction, the subsequent construction shall be considered a substantial development for the purpose of this chapter;

H. Operation, maintenance, or construction of canals, waterways, drains, reservoirs, or other facilities that now exist or are hereafter created or developed as a part of an irrigation system for the primary purpose of making use of system waters, including return flow and artificially stored ground water for the irrigation of lands;

I. The marking of property lines or corners on state owned lands, when such marking does not significantly interfere with normal public use of the surface of the water;

J. Operation and maintenance of any system of dikes, ditches, drains, or other facilities existing on September 8, 1975, which were created, developed, or utilized primarily as a part of an agricultural drainage or diking system;

K. Site exploration and investigation activities that are prerequisite to preparation of an application for development authorization under this chapter, if:

v. The activity does not interfere with the normal public use of the surface waters;

vi. The activity will have no significant adverse impact on the environment including, but not limited to, fish, wildlife, fish or wildlife habitat, water quality, and aesthetic values;

vii. The activity does not involve the installation of a structure, and upon completion of the activity the vegetation and land configuration of the site are restored to conditions existing before the activity;

viii. A private entity seeking development authorization under this section first posts a performance bond or provides other evidence of financial responsibility to the local jurisdiction to ensure that the site is restored to preexisting conditions; and

ix. The activity is not subject to the permit requirements of RCW 90.58.550;

L. The process of removing or controlling an aquatic noxious weed, as defined in RCW 17.26.020, through the use of an herbicide or other treatment methods applicable to weed control that are recommended by a final environmental impact statement published by the department of agriculture or the department jointly with other state agencies under chapter 43.21C RCW.

27. “Substantially degrade” means cause significant ecological impact.
2. “Temporary sign” means a sign not intended to be permanently installed.
3. “Temporary Use” A use that is limited in scope, duration, and frequency.

1. “Upland”, when used as an adjective, means outside of the shoreline area.
2. “Uplands” means those lands outside of the shoreline area and not under shoreline jurisdiction.
3. “Urban Growth Areas” means a regional boundary, set in an attempt to control urban sprawl by encouraging that the area inside the boundary be used for higher density urban development and the area outside is used for lower density development.
4. “Use” means the purpose for which land or a structure is primarily designed, arranged or intended, or for which it is primarily occupied or maintained.

1. “Variance” is a means to grant relief from the specific bulk, dimensional or performance standards set forth in the applicable master program and not a means to vary a use of a shoreline. A variance permit is strictly limited to the adjustment of the bulk, height and setback regulations of the shoreline master program applicable to a particular piece of property, in a situation where the property, because of special circumstances found to exist on the land, and where the strict implementation of the shoreline regulations would result in a hardship on the applicant and significantly interfere with commonly enjoyed by other properties in the same vicinity and shoreline designation.
2. “Vegetation conservation areas” includes activities to prevent the loss of plant communities that contribute to the ecological functioning of shoreline areas. Vegetation conservation deals with the protection of existing diverse plant communities along the shorelines, aquatic weed control, and the restoration of altered shorelines by reestablishing natural plant communities as a dynamic system that stabilizes the land from the effects of erosion.
3. “Visual public access” see public access.
1. “Water-dependent use” means a use or portion of a use which cannot exist in any other location and is dependent on the water by reason of the intrinsic nature of its operations. Examples of water-dependent uses may include marinas, water intake systems and sewer outfalls.

2. “Water-enjoyment use” means a recreational or similar use facilitating public access to the shoreline as a primary character of the use; or, a use that provides for recreational use or aesthetic enjoyment of the shoreline for a substantial number of people as a general character of use and which, through location, design and operation assures the public’s ability to enjoy physical and aesthetic qualities of the shoreline. In order to qualify as a water-enjoyment use, the use must be open to the public and the shoreline oriented space within the project must be devoted to the specific aspects of the use that foster enjoyment. Primary water-enjoyment uses may include, but are not limited to, parks, piers and other improvements facilitating public access to shorelines of the state; and general water-enjoyment uses may include but are not limited to restaurants, museums, aquariums, scientific/ ecological reserves, resorts, and mixed use commercial; PROVIDED that such uses conform to the above water-enjoyment requirements and the provisions of the Master Program.

3. “Water-oriented use” means any one or combination of water-dependent, water-related or water-enjoyment uses.

4. “Water quality” means the physical characteristics of water within shoreline jurisdiction, including water quantity, hydrological, physical, chemical, aesthetic, recreation-related, and biological characteristics. Where used in this chapter, the term "water quantity" refers only to development and uses regulated under this chapter and affecting water quantity, such as impermeable surfaces and storm water handling practices. Water quantity, for purposes of this chapter, does not mean the withdrawal of ground water or diversion of surface water pursuant to RCW 90.03.250 through 90.03.340.

5. “Water-related use” means a use or portion of a use which is not intrinsically dependent on a waterfront location but whose operation cannot occur economically without a shoreline location because:

   M. The use has a functional requirement for a waterfront location such as the arrival or shipment of materials by water or the need for large quantities of water; or

   N. The use provides a necessary service supportive of the water-dependent uses and the proximity of the use to its customers makes its services less expensive and/or more convenient.
6. "Wetlands" means areas that are inundated or saturated by surface water or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, and similar areas. Wetlands do not include those artificial wetlands intentionally created from nonwetland sites, including, but not limited to, irrigation and drainage ditches, grass-lined swales, canals, detention facilities, wastewater treatment facilities, farm ponds, and landscape amenities, or those wetlands created after July 1, 1990, that were unintentionally created as a result of the construction of a road, street, or highway. Wetlands may include those artificial wetlands intentionally created from nonwetland areas to mitigate the conversion of wetlands.

7. “Woody Debris” means all wood naturally occurring or artificially placed in streams, including, branches, stumps, logs and logjams.

Words used in the present tense shall include the future; the singular shall include the plural and the plural the singular; the word "shall" is mandatory and not permissive.

Definitions for terms requiring definitions not found herein shall be determined from the following sources, and if a conflict should arise between sources, such definition shall be established in the following priority:

- RCW 90.58, WAC 173-26, WAC 173-27, WAC 173-22
Article II General Regulations

Except when specifically exempted by statute, all proposed uses and development occurring within shoreline jurisdiction must conform to chapter 90.58 RCW, the Shoreline Management Act, and this master program.

14.15.100 Archeological, Cultural and Historic Resources

The following regulations apply to all shoreline uses and activities in all shoreline designations and on all sites within shoreline jurisdiction having archaeological, cultural, or historic resources that are recorded at the Washington Department of Archaeology and Historic Preservation (DAHP) and/or with local jurisdictions, including Okanogan County, cities and towns within the county, the Colville Confederated Tribes (CCT), and affected Indian tribes and bands; or that have been or may be inadvertently uncovered.

A. Archaeological sites are subject to the National Historic Preservation Act, as amended (16USC470), RCW 27.44 (Indian Graves and Records), RCW 27.53 (Archaeological Sites and Resources), and WAC 25-48 (Archaeological Excavation and Removal Permit).

B. All sites documented by the DAHP or the CCT as having a high probability of containing significant archaeological and historic resources shall be considered suspected historic, cultural, or archaeological resources.

C. Documented historic, cultural, and archaeological sites

1. An evaluation and a report meeting the minimum reporting standards of the DAHP, prepared by a cultural resource management professional who meets the qualification standards promulgated by the National Park Service and published in 36 CFR Part 61, shall be required before the start of any ground disturbance work in any area known to contain archaeological, cultural, or historic resources, regardless of whether a shoreline permit or exemption is required.

2. Upon receipt of application for a shoreline permit or request for a statement of exemption for development on properties within a site known to contain an historic, cultural or archaeological resource(s), the local government with jurisdiction shall require an evaluation and a report meeting the minimum reporting standards of the DAHP, prepared by a cultural resource management professional who meets the qualification standards promulgated by the National Park Service and published in 36 CFR Part 61; provided that, the provisions of this section may be waived if the Administrator determines that the proposed development activities do not include any ground disturbing activities and will not impact a known historic, cultural or archaeological site.
a. The fee for the services of the cultural resource management professional shall be paid by the applicant. The applicant shall submit a minimum of five (5) copies of the site assessment to the Administrator for distribution to the applicable parties for review.

b. If the evaluation identifies the presence of significant historic, cultural, or archaeological resources, a Cultural Resource Management Plan (CRMP) shall be prepared by a cultural resource management professional who meets the qualification standards promulgated by the National Park Service and published in 36 CFR Part 61. The fee for the services of the cultural resource management professional shall be paid by the applicant. In the preparation of such plans, the cultural resource management professional shall solicit comments from the DAHP, the History and Archeology Department of the CCT, and any Indian or First Nations tribes or bands known to be affected. Comments received shall be incorporated into the conclusions and recommended conditions of the CRMP to the maximum extent practicable. The applicant shall submit a minimum of five (5) copies of the CRMP to the Administrator for distribution to the applicable parties for review.

c. The recommendations and conclusions of the CRMP shall be used to assist the Administrator in making final administrative decisions concerning the presence and extent of historic, cultural, and archaeological resources and appropriate mitigating measures. The Administrator shall consult with the DAHP, the History and Archeology Department of the CCT, and any affected Indian or First Nations tribes or bands prior to approval of the CRMP.

d. The Administrator may reject or request revision of the conclusions reached in a CRMP when the Administrator can demonstrate that the assessment is inaccurate or does not fully address the historic, cultural, and archaeological resource management concerns involved.

3. Upon receipt of a complete development permit application in an area of documented historic, cultural, or archaeological resources, the local government with jurisdiction shall notify and request a recommendation from appropriate agencies, including the DAHP, the CCT, and any Indian or First Nations tribes or bands known to be affected. Recommendations of such agencies and other affected persons shall be duly considered and adhered to whenever feasible. Notification shall include the following information:

a. The date of application, the date of notice of completion of the application, and the date of the notification;
b. A site map including the street address, tax parcel number, township, range, and section of the proposed project area;

c. A description of the proposed project action and a list of the project permits included in the application, and, if applicable, a list of any studies requested by the local government with jurisdiction;

d. The identification of other permits not included in the application, to the extent known by the local government with jurisdiction;

e. The identification of existing environmental documents that evaluate the proposed project and, if not otherwise stated on the document providing notice of application, the location where the application and any studies can be reviewed;

f. Any other information determined appropriate by the local government with jurisdiction;

g. A statement indicating those development regulations that will be used for project mitigation or a determination of consistency, if they have been identified at the time of notice;

h. A statement of the limits of the comment period and the right of each agency to comment on the application within a fifteen (15) day time period, request a copy of the decision once made, and appeal a decision when allowed by law.

4. In granting shoreline permits or statements of exemption for development on properties within a site documented to contain a historic, cultural or archaeological resource(s), the local government with jurisdiction may attach conditions to provide sufficient time and/or conditions for consultation with the DAHP, the CCT, and any affected Indian or First Nations tribes or bands, and to ensure that historic, cultural, and archaeological resources are properly protected. Permit or other requirements administered by the DAHP pursuant to RCW 27.44 and RCW 27.53 may apply in addition to the provisions of this SMP.

D. Inadvertent Discovery

1. All shoreline permits shall contain provisions requiring that, whenever historic, cultural or archaeological sites or artifacts are discovered in the process of development in shoreline areas, work on that portion of the development site shall be stopped immediately, the site secured, and the find reported as soon as possible to the Administrator.

2. Upon notification of such find, the property owner shall notify the DAHP, the History and Archaeology Department of the CCT, and any Indian or First Nations tribes or bands known to be affected. Notification to agencies shall include the information specified for notification under the heading, “Documented” historic, cultural, and archaeological sites” above.
3. Upon notification of such find, the Administrator shall conduct a site investigation to determine the significance of the discovery. Based upon the findings of the site investigation and consultation with the parties listed above, the Administrator may require that an immediate evaluation be conducted or may allow stopped work to resume. The evaluation shall meet the minimum reporting standards of the DAHP and shall be conducted by a cultural resource management professional who meets the qualification standards promulgated by the National Park Service and published in 36 CFR Part 61, to determine the presence of significant historic, cultural, or archaeological resources. The fee for the services of the cultural resource management professional shall be paid by the landowner or responsible party. The applicant shall submit a minimum of five (5) copies of the evaluation and accompanying report to the Administrator for distribution to the applicable parties for review.

4. If an evaluation is required, the area of inadvertent discovery shall be stabilized, contained or otherwise protected until the evaluation is completed. The evaluation shall be distributed to the DAHP, the History and Archaeology Department of the CCT, and any Indian or First Nations tribes or bands known to be affected for a fifteen (15) day review period or, in the case of inadvertent discovery of human remains, a thirty (30) day review period to determine the significance of the discovery. If the above listed agencies or governments have determined that the site is not significant, or if the above listed agencies or governments have failed to respond within the applicable review period following receipt of the site assessment, stopped work may resume.

5. Upon receipt of a positive determination of a site’s significance, the Administrator may invoke the provisions for known sites, above, for a Cultural Resource Management Plan.

E. The requirements of this section shall not apply where an applicant has obtained an approved Archeological Excavation and Removal permit from the DAHP pursuant to WAC 25-48-060, provided that the applicant must adhere to the requirements of said approved permit.
14.15.110 Critical Conservation Areas

A. Flood Hazard Reduction

1. All development shall conform to the provisions of the Okanogan County Flood Hazard Ordinance, the Zoning Code, and the 2006 International Building Code, all of which contain safeguards to reduce the risk of damage from flooding.

2. Any use or development shall maintain the pre-development movement (volume and velocity) of surface water and prevent or minimize the unnatural diversion of flood water to otherwise flood-free areas which could necessitate expensive and environmentally disruptive flood control methods.

3. All development applications shall clearly delineate the 100 year flood plain boundary.

4. In-stream structures shall provide for the protection and preservation, of ecosystem-wide processes, ecological functions, and cultural resources, including, but not limited to, fish and fish passage, wildlife and water resources, shoreline critical conservation areas, hydro geological processes, and natural scenic vistas. The location and planning of in-stream structures shall give due consideration to the full range of public interests, watershed functions and processes, and environmental concerns, with special emphasis on protecting and restoring priority habitats and species.

5. Normal and routine repair and maintenance of flood control structures¹ in existence on the date of adoption of this SMP shall be exempt from permit requirements.

6. All shoreline uses and activities shall be located and designed to minimize or prevent the need for shoreline stabilization measures, flood protection works, filling, or substantial site re-grading. The use of car bodies, scraps of building materials, tires, asphalt or concrete from street work, or any discarded pieces of equipment, appliances or other debris for the stabilization of shorelines is prohibited. See 14.15.350, for specific shoreline stabilization regulations and standards.

7. Development in floodplains should not significantly or cumulatively increase flood hazards or be inconsistent with comprehensive flood hazard management plans adopted pursuant to Chapter 86.12 RCW.

¹ As required and authorized by the US Army Corps of Engineers
8. New structural flood hazard reduction measures are allowed in shoreline jurisdiction only when it can be demonstrated by a scientific and engineering analysis that they are necessary to protect existing development, that nonstructural measures are not feasible, that impacts on ecological functions and priority species and habitats can be successfully mitigated so as to assure no net loss, and that appropriate vegetation conservation actions are undertaken consistent with section 14.15.130 Vegetation Conservation and WAC 173-26-221(5).

9. New structural flood hazard reduction measures shall be placed landward of the associated wetlands, and designated vegetation conservation areas, except for actions that increase ecological functions, such as wetland restoration, or as noted below. Provided that such flood hazard reduction projects be authorized if it is determined that no other alternative to reduce flood hazard to existing development is feasible. The need for, and analysis of feasible alternatives to, structural improvements shall be documented through a geotechnical analysis.

10. New structural public flood hazard reduction measures, such as dikes and levees shall dedicate and improve public access pathways unless public access improvements would cause unavoidable health or safety hazards to the public, inherent and unavoidable security problems, unacceptable and unmitigable significant ecological impacts, unavoidable conflict with the proposed use, or a cost that is disproportionate and unreasonable to the total long-term cost of the development.

11. The removal of gravel for flood management purposes shall be consistent with an adopted flood hazard reduction plan be consistent with section 14.15.220 Dredging and section 14.15.260 Mining and be allowed only after a biological and geomorphological study shows that extraction has a long-term benefit to flood hazard reduction, does not result in a net loss of ecological functions, and is part of a comprehensive flood management solution.

B. Aquifer Recharge Areas

1. Commercial and industrial uses involving the processing, use, storage, or production of hazardous, toxic, or dangerous materials shall meet applicable federal, state, and local regulations within critical aquifer recharge areas because of the potential for introduction of those materials to ground water.
2. Agricultural and forest practices shall adhere to all applicable local, state, and federal laws regarding feedlots, pesticide and fertilizer application, forest conversions, and shall be conducted in a manner so as to limit introduction of contaminants to ground water.

3. All proposed activities within aquifer recharge areas must comply with the water source protection requirements of the federal Environmental Protection Agency, state Department of Health and the Okanogan County Health District.

4. The County Health District shall comply with any state or federally required well-head protection program for the County's public water supplies.

5. Any application for a county permit for a use that utilizes or generates hazardous or toxic materials, shall be required to comply with state and federal regulations (the Clean Drinking Water Act and the Clean Water Act) that pertain to hazardous or toxic materials.

6. All household hazardous waste shall be disposed of according to Okanogan County Comprehensive Solid Waste Management Plan, Adopted November 2004 as amended.

7. All new development activity shall comply with the maximum lot coverage required in that zone. When no maximum lot coverage is specified, and the proposed development is in an area identified as a critical aquifer recharge area, then a maximum of 50% of the land area within the boundaries of the aquifer recharge area shall be maintained in pervious surfaces. This allows for the continued recharging of the aquifer.

C. Geologically Hazardous Areas

1. Lots containing geologically hazardous areas, as defined by 14.15.030G(1), shall not be developed, or subdivided, where the proposed development would
   a. cause a foreseeable risk to people or improvements from the geological condition;
   b. require structural shoreline stabilization, during the life of the development, unless demonstrated during subdivision that the geological hazard can be reduced or mitigated by engineering, design or modified construction, e.g. such as lots created have safe buildable areas.

   1. Hazards to developments proposed in or near geologically hazardous areas can be reduced or mitigated by engineering, design, or modified construction so that risks to public health and safety are minimized.
c. When technology cannot reduce risks to acceptable levels, building in geologically hazardous areas must be avoided. Development, structures, or uses in or near geologically hazardous areas shall not be approved unless certified as safe and lot development is designed and constructed so as not to pose a foreseeable risk to people or improvements, or require structural shoreline stabilization during the life of the development as designed by a qualified engineer or geologist, licensed in the state of Washington. Additionally, any shoreline stabilization proposal and the structure will not increase the hazard risk, such that:

1. New structural flood hazard reduction measures in shoreline jurisdiction may be allowed only when it can be demonstrated by a scientific and engineering analysis that they are necessary to protect existing development, that nonstructural measures are not feasible, that impacts on ecological functions and priority species and habitats can be successfully mitigated so as to assure no net loss, and that appropriate vegetation conservation actions are undertaken consistent with WAC 173-26-221(5).

2. A reasonable setback or design standards shall be developed based on the geotechnical report for the structure on or next to a geologically hazardous area on a case by case basis.

3. Existing uses legally established in geologically hazardous areas shall be allowed to continue. Expansion of any existing use shall meet structural standards that ensure the safety of the structure.

4. A storm water management plan may be required of anyone proposing to develop in a geologically hazardous area.

5. A geotechnical report and mitigation plan may be required to ensure no net loss of ecological function. See section 14.15.350, Shoreline Stabilization, and 14.15.320 Residential Development.

D. Fish and Wildlife Habitat Conservation Areas

1. Riparian Fish and Wildlife Habitat Conservation Areas shall be comprised of Zone 1 and Zone 2 vegetation conservation areas.

   a. Zone 1-Riparian Fish and Wildlife Habitat Conservation Area. The area with existing riparian vegetation, or one-half the distance of the setback (14.15.120(E)), whichever is greater, in all shoreline areas is designated as a Vegetation Buffer Conservation Area. In these areas, existing native vegetation must be maintained, except as provided for in section 14.15.130, 14.15.130(L), and 14.15.240.
and buffers/conservation areas\(^2\) in shoreline areas

\(^2\) As defined and established in the local jurisdiction’s Critical Areas regulations
a. In cases where there is less than 25’ of existing riparian vegetation, the width of the Vegetation Buffer may be reduced, subject to the Riparian Buffer Conservation Area Width Averaging (section 14.15.110D(3)) or Administrative Buffer Reduction (section 14.15.110D(4)) and mitigation management plan (14.15.460(D) prepared by a qualified professional. To support a claim that the Vegetation Buffer Conservation Area should be reduced, proof may include, but is not limited to, photographs of the undisturbed site, and opinions of qualified professionals. In no case shall the buffer be reduced to less than 10’ in width. There is an exception for water dependent portion of development.

2.b. Zone 2-Use Buffer Riparian Fish and Wildlife Habitat Conservation Area. The area between the Vegetation Buffer Conservation Area and setback line (14.15.120(E)) in all shoreline areas is designated as Zone 2, Use Buffer. In these areas, removal of existing native vegetation shall be limited as provided in 14.15.120(E) and 14.15.130, 14.15.240 and uses limited to low intensity recreation, agricultural, accessory residential uses and water-dependent and permitted accessory water-related commercial uses.

3.2 Riparian buffer fish and wildlife habitat conservation area width averaging

a. The total required (Zone 1 + Zone 2) buffer riparian area widths may be modified by the Administrator for single family dwellings, for existing legal lots of record in place at the time of adoption of this Program, by averaging buffer riparian area widths based on a report submitted by the applicant and prepared by a qualified professional biologist. Buffer riparian area width averaging shall only be allowed where the applicant demonstrates all of the following:

i. Averaging is necessary to avoid an extraordinary hardship to the applicant caused by circumstances peculiar to the property;

ii. The designated habitat conservation area contains variations in sensitivity due to existing physical characteristics or the character of the buffer varies in slope, soils, or vegetation;

iii. The width averaging shall not adversely affect the designated habitat conservation area’s and buffer’s functional value;
iv. The total area contained within the buffer riparian fish and wildlife habitat conservation area after averaging is no less than that contained within the standard buffer riparian fish and wildlife habitat conservation area prior to averaging.

v. The minimum buffer riparian fish and wildlife habitat conservation area width at its narrowest point shall not be less than seventy-five (75) percent of the buffer habitat conservation area width established under 14.15.120(E).

vi. Sites which have had buffer riparian fish and wildlife habitat conservation area widths reduced or modified, by any prior action administered by the local government are not eligible for the provisions of this section. Sites which utilize this provision are not eligible for any future buffer width reductions, under any provision of this Program, except as administered under Section 14.15.590 Variances, of this Program.

4.3 Administrative Buffer Riparian Fish and Wildlife Habitat Conservation Area Reduction.

The Administrator shall have the authority to reduce riparian fish and wildlife habitat conservation area buffer widths established in 14.15.120(E) on a case-by-case basis for single family dwelling units which would be placed on existing legal lots of record in place at the time of adoption of this Program; provided that the general standards for avoidance and minimization per 14.15.460(D) shall apply, and when the applicant demonstrates to the satisfaction of the Administrator that all of the following criteria have been met:

a. The riparian fish and wildlife habitat conservation area buffer reduction shall not result in a net loss of functions of the habitat conservation area or buffer.

b. The maximum buffer width reduction allowed shall not exceed twenty-five (25) percent total required riparian fish and wildlife habitat conservation area buffer established in Section 14.15.120(E).

c. The riparian fish and wildlife habitat conservation area buffer width reduction is contingent upon the submittal and approval of a critical habitat management report and mitigation plan in conformance with 14.15.460 section C and D.

d. Sites which have had riparian fish and wildlife habitat conservation area buffer widths reduced or modified, by any prior action administered by local jurisdiction are not eligible for the provisions of this section. Sites which utilize this provision are not eligible for any future riparian fish and wildlife habitat conservation area buffer reductions, under any provision of this Program.

a. Habitat Conservation areas will be left undisturbed unless the development proposal incorporates a habitat management plan and/or mitigation plan.

b. Development occurring within 1000 feet of a state or federal threatened, endangered, or sensitive species den, nesting, or breeding site, migration corridors or feeding areas of terrestrial species shall require a habitat management and mitigation plan.

c. Rocky Mountain Mule Deer Habitat, habitat connectivity and migration corridors for mule deer shall be considered in habitat management and/or mitigation plans.

d. Development in or over all surface waters shall require a habitat mitigation plan.

e. The Administrator may waive management and/or mitigation plan requirements for parcels of record five acres or less that are contained within a final plat of a short subdivision or major subdivision filed for record before (insert date of adoption of this ordinance).

f. Subdivision proposals involving habitat conservation areas shall comply with the following minimum standards:

   i. A habitat management and mitigation plan shall be required for developments within or containing habitat conservation areas.

   ii. Designated habitat conservation areas and their associated buffers created within habitat management or mitigation plans shall be delineated and disclosed on final plat maps, document, etc., as habitat conservation area tracts, nonbuildable lots, buffer areas or common areas. Ownership and control may be transferred to a homeowner’s association or designated as an easement or covenant encumbering the property.

E. Wetlands

1. Wetland buffers in shoreline areas shall be as follows:

   a. The Administrator may waive the delineation requirement if the use or structure is greater than 300 feet away from the OHWM of the wetland.

   b. Alternative I- (Table 2): Buffer width based only on the category
of wetland impacted. The wetland shall be delineated and
categorized by a qualified professional using the Washington

</table>

Alternative III-Applicants may alternatively evaluate and determine wetland buffer width based on the intensity of the impacts, wetland function, or special characteristics located in the tables below. A critical area habitat management report and mitigation management plan that shows that such a reduction will result in no net loss of wetland function will be required. Such report and plan must be prepared by a qualified professional and be based on the most current, accurate, and complete scientific and technical information and site specific conditions and analysis.
**Table 5: Widths of buffers needed to protect Category I wetlands**

<table>
<thead>
<tr>
<th>Wetland Characteristics</th>
<th>Buffer Widths by Impact of Proposed Land Use (apply most protective if more than one criterion is met)</th>
<th>Other Measures Recommended for Protection</th>
</tr>
</thead>
</table>
| Natural Heritage Wetlands | Low - 125 ft  
Moderate – 190 ft  
High – 250 ft | No additional surface discharges to wetland or its tributaries  
No septic systems within 300 ft  
Restore degraded parts of buffer |
| Bogs | Low - 125 ft  
Moderate – 190 ft  
High – 250 ft | No additional surface discharges to wetland or its tributaries  
Restore degraded parts of buffer |
| Forested | Buffer size to be based on score for habitat functions or water quality functions | If forested wetland scores high for habitat, need to maintain connectivity to other natural areas  
Restore degraded parts of buffer |
| Alkali | Low – 100 ft  
Moderate – 150 ft  
High – 200 ft | No additional surface discharges to wetland or its tributaries  
Restore degraded parts of buffer |
| High level of function for habitat (score for habitat 29 - 36 points) | Low – 100 ft  
Moderate – 150 ft  
High – 200 ft | Maintain connections to other habitat areas  
Restore degraded parts of buffer |
| Moderate level of function for habitat (score for habitat 20 - 28 points) | Low – 75 ft  
Moderate – 110 ft  
High – 150 ft | No recommendations at this time |
| High level of function for water quality improvement (24 – 32 points) and low for habitat (less than 20 points) | Low – 50 ft  
Moderate – 75 ft  
High – 100 ft | No additional surface discharges of untreated runoff |
| Not meeting any of the above characteristics | Low – 50 ft  
Moderate – 75 ft  
High – 100 ft | No recommendations at this time |
### ii. Table 6: Widths of Buffers Needed to Protect Category II Wetlands

<table>
<thead>
<tr>
<th>Wetland Characteristics</th>
<th>Buffer Widths by Impact of Proposed Land Use (apply most protective if more than one criterion is met)</th>
<th>Other Measures Recommended for Protection</th>
</tr>
</thead>

| Score for all 3 basic functions is less than 30 points | Low - 25 ft  
Moderate – 40 ft  
High – 50 ft | No recommendations at this time |

2. Standard Wetland Buffer Width Averaging. Standard wetland buffer zones may be modified by averaging buffer widths. Wetland buffer width averaging shall be allowed only where the applicant demonstrates all of the following:
   a. Averaging is necessary to avoid an extraordinary hardship to the applicant caused by circumstances peculiar to the property.
   b. That the wetland and its buffer contain variations in sensitivity due to existing physical characteristics;
   c. That low intensity land uses would be located adjacent to areas where buffer width is reduced, and that such low intensity land uses are guaranteed in perpetuity by covenant, deed restriction, easement, or other legally binding mechanism to not be converted to a high intensity use; and
   d. That width averaging will not materially degrade the wetland functional values.
e. The minimum buffer width at its narrowest point shall not be less than 75 percent of the buffer width established under alternative I, II, or III.

f. The total area contained within the buffer after averaging is no less than that contained within the standard buffer prior to averaging.

g. Sites which have had buffer widths reduced or modified, by any prior action administered by local jurisdiction are not eligible for the provisions of this section. Sites which utilize this provision are not eligible for any future buffer width reductions, under any provision of this Program, except as administered under Section 14.15.590, Variances of this Program.

h. The variation of buffer widths on a site, via buffer width averaging, must be supported by the most current technical and scientific information as demonstrated by the submittal and approval of a fish and wildlife habitat conservation area management and mitigation plan in conformance with 14.15.360(D).

3. Administrative Reduction of Standard Wetland Buffer Area Width: The Administrator shall have the authority to reduce buffer widths established through Alternative I, II or III on a case-by-case basis for single family dwelling units which would be placed on existing legal lots of record in place at the time of adoption of this Program; provided that the general standards for avoidance and minimization per Section 14.15.110(E)(6) shall apply, and when the applicant demonstrates to the satisfaction of the Administrator that all of the following criteria have been met:

a. The buffer reduction shall not result in a net loss of functions of the habitat conservation area or buffer.

b. The maximum buffer width reduction allowed shall not exceed twenty-five (25) percent total required buffer established in section.

c. The buffer width reduction is contingent upon the submittal and approval of a critical area habitat management report and mitigation plan in conformance with 14.15.460 section C and D.

d. Sites which have had buffer widths reduced or modified, by any prior action administered by local jurisdiction are not eligible for the provisions of this section. Sites which utilize this provision are not eligible for any future buffer width reductions, under any provision of this Program, except as administered under 14.15.590 Variances, of this Program.
4. Buffer Integrity. Except as otherwise specified, wetland buffer zones shall be retained in their natural condition. Where buffer disturbance has occurred during construction, revegetation with native vegetation shall be required based on the Mitigation Ratio Table 9.

</tbody>
</table>

NOTE: Preservation is discussed in the following section.

$^4$ These ratios are based on the assumption that the rehabilitation or enhancement actions implemented represent the average degree of improvement possible for the site. Proposals to implement more effective rehabilitation or enhancement actions may result in a lower ratio, while less effective actions may result in a higher ratio. The distinction between rehabilitation and enhancement is not clear-cut. Instead, rehabilitation and enhancement actions span a continuum. Proposals that fall within the gray area between rehabilitation and enhancement will result in a ratio that lies between the ratios for rehabilitation and the ratios for enhancement.

$^5$ Natural Heritage sites, alkali wetland, and bogs are considered irreplaceable wetlands because they perform some special functions that cannot be replaced through compensatory mitigation. Impacts to such wetlands would therefore result in a net loss of some functions no matter what kind of compensation is proposed.
5. **Permitted Uses** in a Wetland Buffer Zone. Activities shall not be allowed in a buffer zone except for the following:

   a. Activities having minimal adverse impacts on buffers and no adverse impacts on regulated wetlands. These may include but are not limited to: low intensity, passive recreational activities such as unpaved trails, wildlife watching blinds, short term scientific or educational activities, and sports fishing or hunting;

   b. With respect to Category III and IV wetlands, storm water management facilities having no reasonable alternative on-site location; or

   c. With respect to Category II, III, and IV wetlands, low-intensity development having no feasible alternative location.

   d. Existing agricultural activities, normal or necessary to general farming conducted according to best management practices including the raising of crops or grazing of livestock.

   e. Uses and activities on parcels physically separated from the OHWM by a parcel under separate ownership, flood control levee, or a public right-of-way are exempt from the buffer requirements providing the physical separation is greater than the width of the required buffers for the wetland or shoreline designation buffers at the location.

6. **Mitigation**

   a. The mitigation measures will be considered as outlined below in order of priority with:

      i. Avoiding the impact altogether by not taking a certain action or parts of an action;

      ii. Minimizing impacts by limiting the degree or magnitude of the action and its implementation, by using appropriate technology, or by taking affirmative steps to avoid or reduce impacts;

      iii. Rectifying the impact by repairing, rehabilitating, or restoring the affected environment;

      iv. Reducing or eliminating the impact over time by preservation and maintenance operations during the life of the action;

      v. Compensating for the impact by replacing, enhancing, or providing substitute resources or environments; and/or

      vi. Monitoring the impact and the compensation projects and taking appropriate corrective measures.
b. In determining appropriate mitigation measures applicable to shoreline development, lower priority measures shall be applied only where higher priority measures are determined to be infeasible or inapplicable.

i. Consistent with WAC 173-26-186 (5) and (8), master programs shall also provide direction with regard to mitigation for the impact of the development so that:

   (a) Application of the mitigation sequence achieves no net loss of ecological functions for each new development; and

   (b) does not result in required mitigation in excess of that necessary to assure that development will result in no net loss of shoreline ecological functions; and

   (c) not have a significant adverse impact on other shoreline functions fostered by the policy of the act.

14.15.120 Shoreline Bulk and Dimensional Standards

A. Table 1 establishes the minimum dimensional requirements for development. Dimensional standards for critical conservation areas are governed by the provisions of 14.15.110.

B. No new structures within the shoreline shall exceed a height of 35 feet above average grade level without a shoreline variance provided for in 14.15.590.

C. Lot frontage shall be measured along the OHWM.

D. All uses and activities, including those exempt from the requirement to obtain a shoreline substantial development permit, shall adhere to all required setbacks and other development standards, and shall retain all required buffers, in accordance with the provisions of this master program.

E. Table 1: Building setbacks, height limits, and lot frontage.

All uses and activities must comply with all applicable standards for the shoreline designation where the use or activity will occur. All development standards are subject to modification based on a site specific assessment, but in no case shall the standards be reduced greater than 25% of the minimums stated below without the approval of a Shoreline Variance.

**Dimensions/Lot Coverage**

<sup>6</sup> All setbacks are measured on a horizontal plane from the ordinary high water mark (OHWM).

<sup>7</sup> The setback may be reduced to 0' for those water-dependent uses (e.g. aquaculture, marinas) that require location adjoining the water, but in all cases such a setback shall be limited to the smallest area possible.

<sup>8</sup> Uses and activities on parcels physically separated from the OHWM by a parcel under separate ownership or a public right of way are exempt from the buffer requirements providing the physical separation is greater than the width of the required buffers.

<sup>9</sup> The area between the Zone 1 Vegetation Buffer and the setback line.
### 14.15.130 Vegetation Conservation

#### A. Restoration or enhancement of any shoreline area that has been disturbed or degraded shall use plant materials from the recommended list (Appendix H) or other species approved by agencies or organizations operating within the jurisdiction, such as the departments of Ecology, County Extension, Fish and Wildlife or the Native Plant Society.

#### B. Stabilization of erosion-prone surfaces along shorelines shall primarily use vegetative, non-structural means and shall comply with the provisions of 14.15.350. More intensive measures may be permitted providing the project will result in no net loss in shoreline function and if compliant with the provisions of 14.15.350.

#### C. Vegetation removal that would be likely to result in significant soil erosion or the need for structural shoreline stabilization measures is prohibited. This does not preclude the removal of noxious weeds.

#### D. Weed abatement shall comply with all provisions of this SMP.

#### E. Non-destructive pruning and trimming of vegetation for maintenance purposes shall be permitted.

---

10 Minimum lot size may be increased based on applicable comprehensive plan and zoning regulations, but in no case shall be reduced without the approval of a variance. In addition minimum lot size only applies to lots or parcels created subsequent to the date of adoption of this SMP, lots existing at the time of adoption shall be considered existing conforming parcels.

11 Minimum water frontage only applies to lots or parcels created subsequent to the date of adoption of this SMP, lots existing at the time of adoption shall be considered existing conforming parcels. Lot frontage shall be measured along the ordinary high water mark.
F. Topping of trees shall be prohibited, except where required to maintain overhead utility lines.

G. Permits issued for projects in ecologically degraded areas shall include a condition that appropriate shoreline vegetation shall be planted or enhanced, to contribute to the restoration of ecological processes and functions.

H. If weather does not permit immediate restoration of disturbed areas, replanting shall be completed during the next planting season, and the soil shall be protected until replanting is complete.

I. Vegetation from the recommended list (see Chapter 14) or other species authorized by the local government with jurisdiction shall be used. Native plants are preferred. Plants that may compromise shoreline values shall be prohibited. If necessary, a temporary sterile cover crop (e.g., a sterile non-persistent member of the grass family such sterile Triticale, barley, or oats) shall be planted to prevent erosion during the establishment period; said cover crop shall be maintained until the permanent vegetation is sufficiently established to prevent erosion.

J. Replanted areas shall be maintained until desired vegetation is well established (a minimum of three years). In the case of transportation, utility, or other capital facility construction, the agency or developer constructing the facility shall also be responsible for maintaining the vegetation until it is established.

K. All clearing and grading activities shall be limited to the minimum necessary for the allowed or permitted development and shall comply with the provisions of 14.15.130, 14.15.200, and 14.15.230.

L. View Corridor Provision.

1. View corridors may be allowed, subject to the provisions of this section, to provide the general public and property owners of single family residences with opportunities for visual access to water bodies associated with shoreline lots. No more than one view corridor will be allowed per parcel.

2. Vegetation removal that would be likely to result in significant soil erosion or the need for structural shoreline stabilization measures is prohibited.

3. In creating a view corridor, removal of vegetation shall be limited to the minimum necessary to preserve or enhance views. In no case shall the view corridor exceed 15 feet of width with no more than 10 feet in impervious surfaces.

4. Removal of noxious weeds on the state list.
5. Pruning
   
   **A.a.** Non-destructive thinning of lateral branches to enhance views is allowed, but in no circumstance shall removal of more than half of the live crown be permitted.

   **B.b.** Native Shrubs shall not be pruned to a height less than 6 feet.

   **C.c.** Pruning of vegetation waterward of the ordinary high watermark is prohibited.

M. Where impacts to buffers are permitted, new developments shall be required to develop and implement a management and mitigation plan. When required, management and mitigation plans shall be prepared by a qualified professional and shall be consistent with the requirements in 14.15.360(D).

   1. Management and mitigation plans shall describe actions that will ensure no net loss of ecological functions. Vegetation shall be maintained over the life of the use and/or development by means of a conservation easement or similar legal instrument recorded with the County Auditor.
   2. Mitigation measures will be considered as outlined in 14.15.110(D)(6).
   3. Application of mitigation sequence shall achieve no net loss for each new development; and
   4. Does not require mitigation in excess of that necessary to assure that development will result in no net loss of shoreline ecological functions; and
   5. The development shall not have a significant adverse impact on other shoreline functions fostered by the policy of the act.

### 14.15.140 Water Quality

A. Dumping and/or burning of residential, commercial or municipal yard waste within the shoreline setback is prohibited in all shoreline designations.

B. All shoreline development shall be conducted so as to minimize the effects on water quality from the addition of suspended solids, leaching of contaminants, or disturbances to habitat, and shall be consistent with this Master Program as well as the requirements of applicable regulatory agencies, including but not limited to the Washington departments of Ecology and of Fish and Wildlife and the U. S. Army Corps of Engineers. See following sections for activity specific regulations and standards.

C. The disposal or dumping of solid waste is strictly prohibited in all shoreline areas, except in litter containers, which shall be regularly emptied, with the contents collected for transportation to an approved sanitary landfill or transfer station.
D. Okanogan County or the local government with jurisdiction shall give preference to biological or mechanical means rather than herbicides or insecticides for weed and pest control in shoreline areas. When agricultural chemicals, fertilizers and other spray materials are used, provisions shall be made to minimize their entry into any body of water by following guidance found in Eastern Washington Storm water manual and seeking guidance provided by WS Dept of Agriculture and Appendix B. Spraying over open water is prohibited except to control known risks to public health or as approved by the State for treatment of aquatic weeds. Herbicides and pesticides shall not be applied or allowed to directly enter water bodies or wetlands unless approved for such use by the appropriate agencies.

E. All shoreline uses and activities shall comply with the Storm water Management Manual for Eastern Washington (Washington Department of Ecology Publication 04-10-076, as amended). Specific requirements include, but are not limited to:

1. Solid and liquid wastes, untreated effluents, oil, chemicals, and other hazardous materials shall not be allowed to enter any body of water or to be discharged onto land. Equipment for the transportation, storage, handling, or application of such materials shall be maintained in a safe and leak-proof condition. If there is evidence of leakage, the further use of such equipment shall be suspended until the deficiency has been satisfactorily corrected.

2. All shoreline uses and activities in all shoreline designations, both during construction and for the life of the project, shall use best management practices to minimize any increase in surface water runoff and to control, treat, and release surface water runoff so that receiving water quality and shoreline ecological functions are not adversely affected. Such measures may include but are not limited to low impact development, dikes, catch basins, settling ponds, oil/water separators, grassy swales, interceptor drains, and landscaped buffers. All measures shall be adequately maintained to insure proper functioning over time. The Storm water Management Manual for Eastern Washington (Washington Department of Ecology Publication 04-10-076, as amended) shall provide the preferred guidance for surface water runoff best management practices.

F. All shoreline areas disturbed by transportation, utility or other facility maintenance in all shoreline designations shall be restored in compliance with an approved mitigation management plan (if required) and be subject to posting a reclamation bond. Vegetation from the recommended list (Appendix H) or other species authorized by the County, City or Town with jurisdiction shall be used. Planting of non-native plant species shall be prohibited in Zone 1 buffer areas. Plants that may compromise shoreline values shall be prohibited. The permit application submittal shall identify the size, location, and species of plants that will be used. The agency or developer maintaining the facility shall also be responsible for maintaining the vegetation until it is established. See 14.15.130 for specific regulations and standards.
G. All shoreline areas disturbed by residential, commercial or industrial development in all shoreline designations shall be restored in compliance with an approved mitigation management plan (if required) and be subject to posting a reclamation bond. Vegetation from the recommended list (Appendix H) or other species authorized by the County, City or Town with jurisdiction shall be used. Planting of non-native plant species shall be prohibited within Zone 1 buffer areas. Plants that may compromise shoreline values shall be prohibited. The permit application submittal shall identify the size, location, and species of plants that will be used. The owner or manager of the use shall also be responsible for maintaining the vegetation until it is established. See 14.15.130 for specific regulations and standards.

Article III General Use Regulations

14.15.150 Accessory Utilities

Accessory utilities are small-scale distribution facilities connected directly to the uses along the shoreline. Electrical, gas, telephone, cable, water and sewer lines serving a residential development or a commercial establishment are examples of utilities accessory to shoreline uses. Transmission facilities related to a hydropower generating facility are not accessory utilities—they are primary utility facilities.

D.A. Sites disturbed for utility installation shall be stabilized during and immediately following construction to avoid adverse impacts from erosion.

E.B. Sites disturbed for utility installation shall be replanted using native species from the recommended list (Appendix H), with a diversity and type similar to or better than that which originally occurred on the site. Questions about appropriate diversity, plant type, and plant species shall be directed to agencies with expertise, such as the departments of Ecology and Fish and Wildlife.

F.C. Utilities shall be placed landward of the primary structural setback requirements found in 14.15.120(E). Compliance with local health district standards for the placement of onsite sewer systems shall be indicated on pre-application drawings. If feasible, utility lines shall be placed underground. Where lines must be placed aboveground, consideration shall be given to the maintenance of trees in the vicinity of the lines, and the utility line located to eliminate the need for topping or pruning trees.

G.D. Except where no other feasible alternative exists, accessory utilities that require continued maintenance (i.e. no growth over septic systems, electrical transmission lines that require removal of undergrowth) shall not be placed in Zone 1 or Zone 2 Buffers (between OHWM and structure setback), and;

H.E. Accessory Utilities should not result in a net loss of shoreline ecological functions or significant impacts to other shoreline resources and values.
14.15.160 Agriculture

A. New agricultural activities on lands that did not have agricultural activities in place at the time of adoption of this Master Program; conversion of agricultural lands or the development of non-agricultural activities on agricultural lands; and uses in support of agricultural activities are governed by the provisions of this Master Program and subject to the following criteria:

1. Non-Agricultural land\(^{12}\) converted to an agricultural use shall preserve pre-existing riparian habitat and will have a buffer strip of native vegetation no less than the use setback for the shoreline designation where it is located. Said buffer will be established and maintained along shorelines to protect shoreline ecological functions.

2. Uses and activities shall be consistent with regulations specific to the shoreline designation in which the site is located, including regulations in section 14.15.120 and 14.15.360;

3. Uses and activities shall be located and designed to ensure no net loss of ecological functions;

4. Uses and activities shall not have a significant impact on other shoreline ecological function.

B. Discharge of any manure storage facility into ground or surface water is prohibited.

C. Fertilizers shall be applied in a manner which will minimize entry into an adjacent water body.

D. All pesticides shall be handled in accordance with provisions of the Washington Pesticides Application Act (RCW 17.21) and the Washington Pesticides Act (RCW 15.57).

E. Nothing in this section limits or changes the terms of the current exception to the definition of substantial development. A substantial development permit shall be required for all agricultural development not specifically exempted by the provisions of RCW 90.58.030(3)(a)(vi).

F. The provisions of this Master Program do not require modification of or limitations on agricultural activities legally underway on agricultural lands as of the date of adoption of this SMP.

G. All agricultural practices shall comply with all current state and local regulations.

\(^{12}\) - Non-agricultural lands are those lands that have not been subject to agriculture uses as defined in Chapter 2.
14.15.170 Aquaculture

A. Aquaculture projects that involve minimal or no substrate modification shall be given preference over those that involve substantive modification. The applicant shall demonstrate that the degree of proposed substrate modification is the minimum necessary for feasible aquaculture operations at the site. The installation of submerged structures and floating structures shall be allowed only when the applicant demonstrates that no alternative method of operation is feasible.

B. Aquaculture projects that involve minimal or no impact on the aesthetic qualities of the shoreline shall be given preference over those that involve substantial impact. The applicant shall demonstrate that the aesthetic impact is the minimum necessary for feasible aquaculture operations at the site.

C. Aquaculture projects that would have a significant adverse impact on natural, dynamic shoreline processes, or that would result in a net loss of shoreline ecological functions (including spreading disease to native aquatic life or establishing new nonnative species that cause significant ecological impacts), shall be prohibited.

D. Aquaculture practices shall be designed to minimize use of artificial substances and shall use chemical compounds that are least persistent and have the least impact on plants, animals and water quality. Herbicides and pesticides shall be used only in conformance with state and federal standard and to the minimum extent needed for the health of the aquaculture activity.

E. Aquaculture projects that would significantly conflict with navigation or with established water-dependent uses shall be prohibited.

F. Applications for aquaculture projects shall include all information necessary to conduct a thorough evaluation of the proposed aquaculture activity, including but not limited to the following:

1. A site plan map including:
   a. The perimeter of the proposed aquaculture operations area.
   b. Existing bathymetry depths based on the Ordinary High Water Mark (OHWM).
   c. Adjacent upland use, vegetation, presence of structures, docks, bulkheads and other modifications. If there are shore stabilization structures, provide the beach elevation at the toe of the structure and the top of the structure (OHWM datum).
   d. Areas where specific substrate modification will take place or structures will be constructed or installed.
   e. Access provisions.
   f. Location of storage or processing structures or facilities.
2. A baseline description of existing conditions, including best available information on:
   a. Water quality
   b. Prevailing storm wind conditions
   c. Current flows
   d. Flushing rates
   e. Areas of differing substrate composition.
   f. Areas of aquatic and upland vegetation complexes.
   g. Existing shoreline or water uses and structures.
   h. Aquatic and benthic organisms.
   i. Assessment of aquatic species, and spawning and other lifecycle use of, or adjacent to, the site. Further baseline studies including surveys and sampling may be required depending upon the adequacy of available information, existing conditions, and the nature of the proposal.

3. A detailed description of the project proposal including:
   a. Species to be reared.
   b. Substrate modification or vegetation removal.
   c. Planting, harvest and processing location, method and timing, including work proposal and construction techniques proposed (list all hand tools, machinery used (such as track hoes, trucks or barges), type of work, frequency, and duration.

4. Anticipated use of any feed, pesticides, herbicides, antibiotics, vaccines, growth stimulants, antifouling agents, or other chemicals, and an assessment of predicted impacts. No such materials shall be used until approval is obtained from all appropriate State and Federal agencies, including but not limited to the U.S. Food and Drug Administration, and the Washington State departments of Ecology, Fish and Wildlife, and Agriculture, as required, and proof thereof is submitted to the local government with jurisdiction. Compounds with the least persistence shall be used. An annual report of antibiotic use shall be submitted to the Okanogan County Health District. The report shall indicate the type and amount of antibiotics used during the previous calendar year. Actual usage data for all chemicals and antibiotics shall be maintained for review by Health District staff at all times.

5. Number of employees/workers necessary for the project, including average and peak employment.

6. Methods of waste disposal and predator control.

7. Methods to address pollutant loading, including biological oxygen demand
Assessment of potential impacts on shoreline ecological functions and processes addressing the baseline conditions identified in the Shoreline Characterization, including but not limited to watershed-level, indirect and cumulative effects.

For floating culture facilities or other structures, the local government with jurisdiction may require a visual impact analysis. (See the Department of Ecology's "Aquaculture Siting Study" 1986 for general approach.) Depending on the size and complexity of the proposal, such analysis may be prepared by the applicant without professional assistance, provided that it includes an adequate assessment of impacts.

Information demonstrating that the site has natural potential for the type(s) of aquaculture proposed, due to necessary substrate or other conditions, as well as water quality suitable for the type(s) of aquaculture proposed.

Information demonstrating that the proposed aquaculture activities will not result in a net loss of shoreline ecological functions or processes or adversely affect Critical Conservation Areas.

Information demonstrating that the proposed aquaculture activities will not substantially and materially conflict with areas devoted to established uses of the aquatic environment. Such uses include but are not limited to navigation, moorage, sport or commercial fishing, underwater utilities, and scientific research. Existing public opportunities for gathering wild stock aquatic resources on public lands shall be addressed in any application for aquaculture on public bedlands. Compensation for loss of public access to public aquatic resources may be required.

Information demonstrating that the proposed aquaculture activities will be compatible with surrounding existing and planned uses.

Aquaculture activities shall comply with all applicable noise, air, and water quality standards. All projects shall be designed, operated and maintained to minimize odor and noise.

Aquaculture activities shall be restricted to reasonable hours and/or days of operation when necessary to minimize substantial, adverse impacts from noise, light, and/or glare on nearby residents, other sensitive uses or critical habitat.

Aquaculture facilities shall not introduce incompatible visual elements or substantially degrade the aesthetic qualities of the shoreline. Aquaculture structures and equipment, except navigation aids, shall be designed, operated and maintained to blend into their surroundings through the use of appropriate colors and materials.

G. If uncertainty exists regarding potential impacts of a proposed aquaculture activity, and for all experimental aquaculture activities, unless otherwise provided for, the local
government with jurisdiction shall require baseline and periodic operational monitoring by a consultant approved by said government, at the applicant's expense, which continue until adequate information is available to determine the success of the project and the magnitude of any probable significant adverse environmental impacts. Permits for such activities shall include specific performance measures and provisions for adjustment or termination of the project at any time if monitoring indicates significant, adverse environmental impacts that cannot be adequately mitigated.

H. All aquaculture projects shall be submitted for review to local, state and federal agencies with expertise, including the Washington departments of Ecology and of Fish and Wildlife, and to the operators of affected FERC licensed hydro-projects. The local government with jurisdiction shall make available to those agencies the Shoreline Inventory and Characterization and maps developed as part of this SMP and shall request technical assistance in establishing any conditions that should be required of a project and in assessing the monitoring plan.

I. New aquatic species that have not previously been cultivated in Washington State shall not be introduced without prior written approval of the Director of the Washington State Department of Fish and Wildlife and the Director of the Washington Department of Health.

J. Except for the sorting or culling of the cultured organism after harvest and the washing or removal of surface materials or organisms prior to or after harvest, no processing of any aquaculture product shall occur in or over the water unless specifically approved by permit. All other processing and processing facilities shall be located landward of the ordinary high water mark.

K. Aquaculture wastes shall be disposed of in a manner that will ensure strict compliance with all applicable waste disposal standards, including but not limited to the Federal Clean Water Act, Section 401, and the Washington State Water Pollution Control Act, RCW Chapter 90.48. No garbage, wastes or debris shall be allowed to accumulate at the site of any aquaculture operation.

L. Predator control shall not involve killing or harassment of birds or mammals. Approved controls include, but are not limited to, overhead netting for birds. The use of other non-lethal, non-abusive predator control measures shall be contingent upon receipt of written approval from the National Marine Fisheries Service or the U.S. Fish and Wildlife Service, as required.

M. In the event of a significant fish kill at the site of a net pen facility, the aquaculture operator shall immediately report to the Okanogan County Health District stating the cause of death and shall detail remedial action(s) to be implemented to prevent reoccurrence. Permits shall include provisions for adjustment or termination of the project at any time if such an event cannot be remediated to the satisfaction of the Health District may be required.

N. All floating and submerged aquaculture structures and facilities in navigable waters shall
be marked in accordance with U.S. Coast Guard requirements.

O. The rights of treaty tribes to aquatic resources within their usual and accustomed areas shall be addressed through direct coordination between the applicant and the affected tribe(s) as part of the permit review process.

P. Aquaculture structures and equipment shall be of sound construction and shall be so maintained. Abandoned or unsafe structures and equipment shall be removed or repaired promptly by the owner. Where any such structure constitutes a hazard to the public, the local government with jurisdiction may, following notice to the owner, abate the structure if the owner fails to do so within 90 days. Said government may impose a lien on the associated shoreline property in an amount equal to the cost of the abatement.

14.15.180 Boating Facilities (including docks, marinas, launches, moorage)

A. When establishing regulation of motorized vs. non-motorized uses, hours and other limitations on boating use of waters in Okanogan County the regulations shall be based, in part, on protection of shoreline functions and values.

B. Mitigation for any adverse development impacts of boating facilities shall be required. On-site mitigation shall be preferred; however, in cases in which meaningful on-site mitigation is not feasible, off-site mitigation may be allowed. In such instances a mitigation management plan shall be required, and shall specify a suitable mitigation site. Adverse development impacts to adjacent properties shall not be allowed.

C. New boating facilities shall be consistent with the applicable local comprehensive and recreation plans. When new sites are considered, sufficient evidence must be presented to show that existing public and commercial marinas, docks, and boat launches are inadequate and cannot be expanded to meet regional demand.

D. For commercial and public boating facilities, the perimeter of parking and storage areas shall be landscaped to provide a visual and noise buffer between adjoining dissimilar uses or scenic areas, using primarily native, self-sustaining vegetation from the recommended list (see Appendix H). Landscaping along the waterward shall also be required. The permit application submittal shall identify the size, location, and species of plants that will be used.

E. Boating facilities shall be located where no or minimal shoreline stabilization will be necessary and where water depths are adequate to eliminate or minimize the need for offshore or foreshore channel construction dredging, maintenance dredging, spoil disposal, filling, beach enhancement, and other maintenance activities.

F. Boating facility design shall minimize interference with geohydraulic processes and disruption of existing shore forms.

G. Parking facilities shall be located outside shoreline jurisdiction, or, if that is not feasible, shall be located landward of the structure setback provided in section 14.15.120(E).
H. Boating facilities, including boat lifts, and navigation aids shall be positioned so as not to be a hazard to navigation.

I. All boating facilities shall be in compliance with the applicable critical conservation areas regulations. A critical area habitat management report shall be prepared according to the provisions of 14.15.870C. Only when such a report has established conclusively that the dock will cause no net loss of shoreline ecological functions shall the dock be permitted.

J. Boating facilities shall provide public access in accordance with 14.15.290.

K. Boating facilities shall be located and designed so their structures and operations will be aesthetically compatible with the area visually affected and will not unreasonably impair shoreline views. Use of natural non-reflective materials is encouraged.

L. The local government with jurisdiction shall request technical assistance from agencies with jurisdiction and/or knowledge, including but not limited to the Washington departments of Ecology, of Fish and Wildlife, and of Health; and shall make available to those agencies the Shoreline Inventory and Characterization and maps developed as part of this master program. The local government with jurisdiction shall consider the comments received from those agencies before making a decision on whether or not to approve the permit, and any conditions or modifications required.

M. Marina-specific regulations

1. Marinas shall be constructed in accordance with the provisions of all applicable current state and local regulations.

2. Marinas constructed after the effective date of these regulations that provide moorage space for watercraft containing toilet facilities shall provide sewage pump-out facilities.

3. Marinas shall be sited, designed, and built to minimize conflicts with agriculture.

N. Dock-specific regulations. The regulations that follow are applicable to all docks, shared moorage facilities, and other overwater boating facilities, and the word “dock” shall apply to all such facilities.

1. The Administrator shall require and use the following information in his or her review of proposals for docks:
   a. Description of the proposed structure, including its size, location, design, materials, and any shoreline stabilization or other modifications required by the project.
   b. Proposed location of the dock relative to property lines and the ordinary high water mark.
   c. Orientation of the dock relative to neighboring docks.
d. Anticipated impacts on views and on access to existing docks, and other reasonably foreseeable impacts on adjacent properties.

e. Any provisions for public access, enjoyment and use of the water and shorelines.

2. For the installation of seasonal docks, the Administrator shall give the landowner the following choices for application requirements:

a. The landowner shall submit a JARPA application and the information provided in section 14.15.180(N)(1). The Administrator will then circulate that information to the appropriate agencies for review and indication of additional permits. Or:

b. The applicant shall contact the Department of Natural Resources, Department of Ecology, Department of Fish and Wildlife, and the Army Corp of Engineers directly to discover if additional permits are required from those agencies for seasonal docks.

3. Docks shall not significantly interfere with the use of navigable waters or with public use of shorelines. The length of any dock shall be the minimum necessary to assure navigability and protect public use of the water body. In no case shall the length of a dock exceed eighty feet (80’) from the OHWM or the point at which the depth of the water exceeds seven feet during high water. On “T” or “L” shaped docks, the length of the extension or extensions perpendicular to the main body of the dock shall not exceed 50% of the length of the lot property line at the OHWM, or the upland property line adjacent to the lake. Docks may be prohibited where necessary to protect navigation or public use of the water body. Docks not attached to the shoreline may be allowed where the dock serves a water-dependent or water-oriented use and measures have been taken to reduce the hazard to navigation.

4. All docks shall be constructed and maintained in a safe condition. Wood treated with creosote, pentachlorophenol or other similarly toxic materials is prohibited. During maintenance, existing treated wood timbers and pilings shall be replaced with alternative materials, such as untreated wood, steel, concrete, or recycled plastic, or encased in a manner that prevents leaching of contaminants into surface water.

5. New docks must have unobstructed grating over at least 50 percent of the surface area; grating material must have at least 60 percent open space. Skirting is prohibited. When existing structures undergo maintenance or repair, the replaced portions must meet these standards.
6. Abandoned or unsafe docks shall be removed or repaired promptly by the owner. Where any such structure constitutes a hazard to the public, the local government with jurisdiction may, following notice to the owner, abate the structure if the owner fails to do so within 90 days. Said government may impose a lien on the associated shoreline property in an amount equal to the cost of the abatement.

7. No over-water application of preservative treatment or other chemical compounds shall be permitted. Docks may be painted provided brush application is used and best management practices are followed to prevent paint from coming in contact with the water.

8. Bulk storage for gasoline, oil, and other petroleum products is prohibited on docks.

9. No more than two boat lifts shall be allowed on any one dock.

10. All permanent docks shall be designed and constructed in compliance with the following standards:

   a. Pilings must be structurally sound prior to placement in the water.

   b. Piles, floats, or other materials in direct contact with the water must be approved by applicable state agencies, including the Washington Department of Fish and Wildlife and, in the case of navigable waters, the Washington Department of Natural Resources.

   c. Floating docks shall include stops to keep the floats off the bottom of the water body at low water level.

   d. Overhead wiring or plumbing is not permitted on docks.

   e. Lighting shall be the minimum necessary to locate the dock at night and shall focus downward to minimize glare. Any dock extending more than fifty feet (50') beyond the OHWM shall have white lights marking the outer dimensions. In all cases, solar-powered lights shall be preferred.

   f. Docks with feet or plates that rest on the lakebed or streambed are preferred over those requiring excavation and footings.

   g. No dock may exceed six feet (6') in width.

   h. Dock design, placement, and orientation shall allow for access to existing docks in the vicinity and shall minimize impacts on adjacent properties, including impacts on views.

11. All seasonal docks shall be subject to the following standards:

   a. Seasonal docks and rafts may be removed during seasonal periods when they are not in use.

   b. Seasonal docks shall be no more than 6' wide.
Floating structures and boats must not rest on the substrate. Specific requirements include:

1. New overwater structures must be located in water sufficiently deep to prevent the structure from grounding at the lowest low water, or stoppers must be installed to prevent grounding, keeping the bottom of the structure at least 1.5 feet (0.5 meters) above the level of the substrate.

d. Tires are prohibited as part of above and below water structures (e.g., floatation, fenders, decking). Existing tires must be replaced with inert or encapsulated materials such as plastic or encased foam, during maintenance or repair of the structure.

e. Floatation material must be encapsulated within a shell that prevents breakup or loss of the floatation material into the water, and is not readily subject to damage by ultraviolet radiation or abrasion. During maintenance, existing un-encapsulated floatation material must be replaced.

O. All residential moorage facilities shall be subject to the following standards:

1. New residential subdivisions or planned developments containing five or more waterfront lots along a shoreline of statewide significance shall be required to provide shared moorage facilities if any moorage facilities are provided.

2. All multi-family residences proposing to provide moorage facilities shall be limited to a single shared moorage facility, provided that the Administrator may authorize more than one shared moorage facility if, based on conditions specific to the site, a single facility would be inappropriate for reasons of safety, security, or impact to the shoreline designation; and if the additional facility or facilities will have no net impact on shoreline ecological resources.

3. For existing residential lots, no more than one dock shall be permitted for each shoreline lot.

4. The length of any dock shall be the minimum necessary to accomplish moorage for the intended boating use and shall be only long enough to accomplish moorage for one boat for each residence served.

5. A dock over 480 square feet or 80 feet in length is allowed only by variance in all shoreline designations.

6. Side yard setbacks: Docks shall be set back a minimum of five feet (5') from side property lines, except that shared moorage facilities may be located adjacent to or upon a side property line when mutually agreed to by contract or covenant with the owners of both properties. A copy of the contract or covenant must be recorded with the Okanogan County Auditor and filed with the application for permit or shoreline exemption.
7. All shared moorage facilities shall be subject to the following standards:
   a. Shared moorage facilities shall include no more than one moorage space per dwelling unit or lot.
   b. The size of the moorage facility shall be the minimum necessary to accomplish moorage for one boat for each residence served, and the moorage facility shall be configured to cause minimal disturbance to shoreline resources.
   c. Any requirement for shared moorage shall be documented with a restriction on the face of the plat. Restrictive covenants prohibiting individual docks and requiring shared moorage, and providing that the covenants shall not be altered without the approval of the Administrator, shall be recorded with the Okanogan County Auditor.
   d. If shared moorage is provided, the applicant shall file a legally enforceable joint use agreement or other legal instrument at the time the permit application for the mooring facility is submitted. Said instrument shall, at minimum, address the following:
      1. Provisions for maintenance and operation;
      2. Easements or tracts for community access; and
      3. Provisions for joint or community use for all benefiting parties.
   e. Any site for shared moorage shall be owned in undivided interest by property owners or managed by the homeowners’ association as a common easement within the residential development. Shared moorage facilities shall be available to property owners in the residential development for community access.

P. Float-specific regulations.

1. No more than one float shall be permitted for each shoreline lot.
2. Floats shall not significantly interfere with navigation or with public use of shorelines. No portion of the float shall be placed more than eighty feet (80’) from the OHWM or the point at which the depth of the water exceeds seven feet (7’) during high water. Floats may be prohibited where necessary to protect navigation or public use of the water body.
3. No float shall have more than one hundred (100’) square feet of surface area.
4. All multi-family residences proposing to provide floats shall be limited to a single shared float, provided that the Administrator may authorize more than one shared float if, based on conditions specific to the site, a single float would be inappropriate for reasons of safety, security, or impact to the shoreline designation; and if the additional float or floats will have no net loss on shoreline ecological function.

14.15.190 Bulkheads, Breakwaters, Jetties, Groins, and Weirs

A. All bulkheads are also subject to the provisions of 14.15.130 and 14.15.350.

A. New or enlarged bulkheads for an existing principal structure or use, including residences and accessory structures, shall not be allowed unless there is conclusive evidence, documented by a geotechnical report prepared according to the local jurisdiction’s standards for a critical areas habitat management report for geologically hazardous areas, that the principal structure is in danger from shoreline erosion caused by currents or waves. Normal sloughing, or shoreline erosion itself, without a scientific or geotechnical analysis, is not demonstration of need. The geotechnical analysis shall evaluate on-site drainage issues and address drainage in a manner that does not degrade shoreline function before considering structural shoreline stabilization. The project design and analysis shall also evaluate vegetation enhancement as a means of reducing undesirable erosion. The geotechnical analysis shall demonstrate that the stabilization measure chosen is the least intrusive means that will be sufficient to achieve stabilization. The geotechnical analysis shall evaluate impacts that could pose stabilization problems to neighboring properties.

B. An existing bulkhead may be replaced with a similar structure if there is a demonstrated need to protect principal uses or structures from erosion caused by currents or waves. In this case, demonstration of need does not necessarily require a geotechnical report; need must, however, be demonstrated using documentable information sources. The replacement structure shall be designed, located, sized, and constructed to ensure no net loss of ecological functions. Replacement bulkheads shall not encroach waterward of the ordinary high water mark or existing structure unless the residence was occupied prior to the date of adoption of this SMP, and there is overriding safety or environmental concerns. In such cases, the replacement structure shall abut the existing stabilization structure. The Administrator may permit vegetative stabilization that restores ecological functions waterward of the ordinary high water mark.

C. A bulkhead-type structure used to stabilize a dock may be permitted, but the size shall be limited to the minimum necessary for the dock. The stabilization structure shall not exceed 1’ wider than the gangplank or pier structure on each side nor shall it exceed 6’ landward in total width along the shoreline.

14.15.200 Clearing and Grading

A. Clearing and grading shall be addressed in the permit or exemption for the shoreline use or activity with which it is associated.
B. Clearing or grading within required vegetation and use buffers and/or wetland buffers beyond the limits set forth in section 14.15.130(L) and 14.15.120(E) shall require a variance in all shoreline designations.

C. No clearing or grading shall be initiated before the permit, exemption or variance is issued.

D. Existing native riparian vegetation shall be retained whenever possible.

E. Grading permits shall be required in the following situations:

1. Where more than 250 cubic yards of material will be moved within a shoreline area; or
2. Any clearing or grading within building setbacks or buffers.
3. Where clearing and grading will modify a percentage of a site’s shoreline area landward of the building setback that is greater than the percentage specified in the following table:

   a. Table 10 Shoreline Designation Specific Clearing and Grading Standards

<table>
<thead>
<tr>
<th>Shoreline Designation</th>
<th>Percent of site that may be cleared and/or graded</th>
</tr>
</thead>
<tbody>
<tr>
<td>Shoreline Residential</td>

</table>

13 - The standards in the table provide for a percentage that may be cleared outside of Vegetation and Use Buffers.

14 - The percentages represent the maximum allowable with an increase of up to 25% permitted subject to a critical habitat management report and mitigation management plan that considers present ecological function, cumulative impacts of the development and restoration opportunities, both on and off-site.
4. In its review of clearing and grading proposals, the local government with jurisdiction shall require and utilize a clearing and grading plan that addresses species removal, replanting, irrigation, erosion and sedimentation control, and plans for protecting shoreline resources from harm.

5. Grading of a development site shall not alter natural drainage patterns in a manner that would increase the rate or quantity of surface run-off.

6. Immediately upon completion of the construction or maintenance activity, remaining cleared areas shall be restored to a naturalistic condition using compatible, self-sustaining vegetation in accordance with 14.15.130.

7. Clearing by hand-held equipment of invasive non-native vegetation on the State Noxious Weed List is permitted in shoreline areas provided the disturbed area is promptly replanted with vegetation from the recommended list or if the site will fully re-vegetate with plants that will support healthy shoreline function on its own within three growing seasons with the submittal of mitigation management plan.

8. All shoreline development and activity shall use applicable BMPS from Eastern Washington Stormwater Management to minimize increases in surface water runoff that may result from clearing and grading activity.

9. Soil stabilization associated with clearing and grading shall, whenever feasible, use bioengineering or other soft stabilization techniques.

10. Any significant placement of materials from off site, or substantial creation or raising of dry upland, shall be considered filling and shall comply with the fill provisions of 14.15.230.

11. Clearing and grading that is not part of an allowed and permitted shoreline use shall require a conditional use permit except on properties physically separated from the shoreline by another property or public right of way.

14.15.210 Commercial Uses and Activities

A. Commercial developments permitted in shoreline areas are, in descending order of preference:

1. Water-dependent uses;
2. Water-related uses;
3. Water-enjoyment uses; and
4. Non-water-oriented uses

B. The Administrator shall require and use the following information in his or her review of commercial development proposals:

1. Consistency with local comprehensive plan and zoning;
2. Specific nature of the commercial activity;
3. Need for shoreline frontage; determination if use qualifies as water-dependent, water-related or water-enjoyment

4. Provisions for public visual and/or physical access to the shoreline;

5. Provisions to ensure that the development will not result in loss of shoreline functions including conditions for ecological restoration;

6. Measures for enhancing the relationship of the use to the shoreline, including aesthetics and landscaping; and

7. The Shoreline Inventory and Characterization and accompanying maps.

C. Non-water-oriented commercial uses are prohibited in all shoreline designations unless they meet the following criteria:

1. The use is part of a mixed-use project that includes water-dependent uses and provides a significant public benefit with respect to the Shoreline Management Act's objectives such as providing public access and ecological restoration; or

2. Navigability is severely limited at the proposed site; and the commercial use provides a significant public benefit with respect to the Shoreline Management Act's objectives such as providing public access and ecological restoration.

3. In areas designated or zoned for commercial use, non-water-oriented commercial development may be allowed if the site is physically separated from the shoreline by another property, flood control structure or public right of way.

4. Non-water-dependent commercial uses should not be allowed over water except in existing structures or in the limited instances where they are auxiliary to and necessary in support of water-dependent uses.

D. Commercial development shall be designed and maintained in a neat, orderly, and environmentally-compatible manner, consistent with the character and features of the surrounding area. To that end, the Administrator may, following a public hearing, adjust the project dimensions and increase required setbacks established in 14.15.120(E) and/or prescribe reasonable use-intensity and screening conditions. Need and special considerations for landscaping and buffer areas shall also be subject to review and approval.

E. All commercial loading and service areas shall be located on the upland (landward) side of the commercial structure or provisions shall be made to separate and screen the loading and service areas from the shoreline.
F. Commercial developments shall be landscaped to visually enhance the shoreline area and contribute to shoreline functions and values, using primarily native, self-sustaining vegetation. Plants from the recommended list (see Appendix H) are preferred. Plants that may compromise shoreline values shall be prohibited. The permit application submittal shall identify the size, location, and species of plants that will be used.

14.15.220 Dredging

A. The following information shall be provided by the applicant for the County to use in review of shoreline dredging and dredge material disposal proposals:

1. Dredging volumes, methods, schedules, frequency, hours of operation, and procedures.

2. Method of disposal, including the location, size, capacity, and physical characteristics of the disposal site, transportation methods and routes, hours of operation, and schedule.

3. Stability of bedlands adjacent to the proposed dredging site.

4. Stability of geologically hazardous areas in the vicinity of the proposed dredging site.

5. Assessment of water quality impacts.

6. Habitat assessment management report meeting the standards prescribed for Fish and Wildlife Habitat Conservation Areas in Critical Areas regulations 14.15.460(C) of the local government with jurisdiction, including migratory, seasonal, and spawning use areas.

B. In evaluating permit applications for any dredging project, the Administrator and/or appropriate hearing or review body shall consider the need for and adverse effects of the initial dredging, subsequent maintenance dredging, and dredge disposal. Dredging and dredge material disposal shall only be permitted where it is demonstrated that the proposed actions will not:

1. Result in significant and/or on-going damage to water quality, fish, or other biological elements;

2. Adversely alter natural drainage and circulation patterns, or significantly reduce flood storage capacities;

3. Affect slope stability; or

4. Otherwise damage shoreline or aquatic resources.

C. Proposals for dredging and dredge disposal shall include all feasible mitigation measures to protect fish and wildlife habitat and minimize adverse impacts such as turbidity; release of nutrients, heavy metals, sulfides, organic materials, or toxic substances; dissolved oxygen depletion; or disruption of food chains.
D. Dredging and dredge material disposal shall not occur in wetlands except as authorized by Conditional Use Permit with conditions providing that valuable functions of the wetland, such as wildlife habitat and natural drainage, will not be diminished.

E. Dredging waterward of the ordinary high water mark shall be allowed by conditional use permit only when:

1. It has been proven that the development cannot be sited elsewhere and has been designed to avoid and minimize new and maintenance dredging (WAC 173-26-231(3)(f);
2. For navigation or existing navigational access;
3. In conjunction with a conforming allowed water-dependent use of water bodies or adjacent shorelands;
4. As part of a habitat management plan that has been approved by the County, City or Town or other entity with jurisdiction, and has been accepted by the Washington Department of Fish and Wildlife or other agency with jurisdiction;
5. To improve water quality;
6. For mining, mineral extraction, mineral prospecting and placer mining as provided in 14.15.260;
7. In conjunction with a bridge or a navigational channel, basin, or structure for which there is a documented public need and where other feasible sites or routes do not exist; or
8. To improve water flow and/or manage flooding only when consistent with an approved flood and/or storm water comprehensive management plan in conjunction with a habitat mitigation management plan.

F. Any impacts of dredging that cannot be avoided shall be mitigated in a manner that assures no net loss of shoreline ecological functions.

G. Dredging shall use techniques that cause the minimum dispersal and broadcast of bottom material.

H. Dredging for the primary purpose of obtaining material for fill is prohibited, except when the material is necessary for the restoration of ecological functions. The fill must be associated with a significant habitat enhancement project that is listed as part of a regional or watershed-scale plan, MTC or CERCLA habitat restoration project. When allowed, the site where the fill is to be placed must be located waterward of the OHWM (WAC 173-26-231(3)(f)) and conducted in accordance with the dredged material management program of the department of natural resources.
I. Dredging to construct canals or basins for boat moorage or launching, water ski landings, swimming holes, and similar uses shall only be permitted as a conditional use and shall include a habitat enhancement/mitigation plan.

J. Disposal of dredged materials shall be accomplished at approved contained upland sites in compliance with all Federal, State and local regulations.

K. Depositing dredge materials in water areas shall be allowed only by Conditional Use Permit, for one or more of the following reasons:

   1. For wildlife habitat improvement.

   2. To correct problems of material distribution adversely affecting fish resources.

   3. For permitted enhancement of beaches that provide public access, where it has been conclusively demonstrated that no net loss of shoreline ecological functions will result or for public safety.

L. Use of dredged material for beach enhancement shall be conducted so that:

   1. Erosion from the disposal site is minimized. Erosion of the dredged material shall not smother emergent vegetation or other shallow productive areas.
2. To the extent possible, the volume of dredged material and frequency of disposal maintain a stable beach profile. Dredged material shall be graded as a uniform slope and contoured to reduce cove and peninsula formation and to preclude stranding of juvenile fish.

M. Land disposal sites shall be replanted as soon as feasible, and in no case later than the next planting season, in order to retard wind and water erosion and to restore the wildlife habitat value of the site. Vegetation from the recommended list (Appendix H) or other species authorized by the County, City, or Town with jurisdiction shall be used. Native plants are preferred. Plants that may compromise shoreline values are prohibited. The permit application submittal shall identify the size, location, and species of plants that will be used. The agency or developer responsible for the land disposal shall also be responsible for maintaining the vegetation as established in the approved mitigation management plan.

N. Proposals for disposal on Shorelands or wetlands within channel migration zone is discouraged and only allowed by Conditional Use Permit (WAC 17-26-231(3)(f). Disposal in other shoreline areas must show that the site will ultimately be suitable for a use permitted by this master program.

O. All dredging shall be the minimum required to support an existing permitted or proposed allowed use and shall be subject to a conditional use permit.

14.15.230 Fill

A. The County, City or Town with jurisdiction shall require and use the following information in its review of fill proposals:

1. Proposed use of the fill area.
2. Physical characteristics, such as chemical and biological composition if appropriate, depending on where it is to be placed or will be subject to inundation.
3. Source of the fill material.
5. Location of fill relative to existing drainage patterns and wetlands.
6. Location of the fill perimeter relative to the ordinary high water mark.
7. Perimeter erosion control or stabilization measures.
8. Type of surfacing and runoff control devices.
B. Fill waterward of the ordinary high water mark or in wetlands shall only be permitted as a conditional use in all shoreline designations, and only for one of the following purposes:

1. water-dependent use,
2. public access,
3. cleanup and disposal of contaminated sediments as part of an interagency environmental clean-up plan,
4. disposal of dredged material considered suitable under, and conducted in accordance with the dredged material management program of the department of natural resources,
5. Expansion or alteration of transportation facilities of statewide significance currently located on the shoreline and then only upon a demonstration that alternatives to fill are not feasible, mitigation action, environmental restoration, beach nourishment or enhancement project.
6. Fill in wetlands must comply with the wetlands provisions of the Critical Areas regulations of the local government's Critical Areas Ordinance and section 14.15.110(E) of this chapter and shall result in no net loss of wetland area in functions including lost time when the wetland does not perform the function and is subject to mitigation in this SMP.

C. Pier or pile support shall be utilized whenever feasible in preference to filling. Fills for approved road, bridge or navigational structure development in floodways or wetlands shall be permitted only if pile or pier supports are proven infeasible.

D. Filling to create dry land is prohibited in floodplains except where it can be clearly demonstrated that the geo-hydraulic characteristics and floodplain storage capacity will not be altered to cause increased flood hazard or other damage to life or property in excess of accepted standards provided by state and/or federal agencies.

E. Fills are prohibited in floodways, except when approved by conditional use permit and where required in conjunction with a proposed water-dependent or other use, as specified in Section 14.15.230(B), above, and where permitted by the local jurisdiction’s Critical Areas regulations and any other relevant regulations or plan (e.g., flood hazard prevention regulations or Comprehensive Flood Hazard Management Plan).

F. Fills shall be permitted only when it is demonstrated that the proposed action will not:

1. Result in significant damage to water quality or fish and wildlife habitat;
2. Adversely affect natural drainage and circulation patterns or significantly
reduce flood water capacities;

3. Affect slope stability; or

4. Otherwise damage shoreline or aquatic resources.

G. Placing fill in water bodies or wetlands to create usable land for shoreline development is prohibited and shall not be used to calculate parcel size proposed for subdivision.

H. Fills shall be designed, constructed, and maintained to prevent, minimize, and control all material movement, erosion, and sedimentation from the affected area. Perimeters of permitted fill projects shall be designed and constructed with silt curtains, vegetated buffer areas, or other methods, and shall be adequately sloped to prevent erosion and sedimentation both during initial fill activities and afterwards. Such containment practices shall occur during the first growing season following completion of the fill and shall be maintained until self-sustaining. The design shall incorporate natural-appearing and self-sustaining control methods unless they can be demonstrated to be infeasible due to existing environmental conditions such as currents and weather.

I. Fill materials shall be sand, gravel, rock, soil, or similar materials. Use of polluted dredge spoils, solid waste, and sanitary landfill materials is prohibited.

J. Fills shall be designed to allow surface water penetration into ground water supplies where such conditions existed prior to fill. Fills shall not be permitted in aquifer recharge areas if they would have the effect of preventing percolation of the water.

K. The timing of fill construction shall be regulated to result in no net loss of shoreline ecological functions, including water quality and aquatic life.

L. Fill on dry land shall not result in substantial changes to patterns of surface water drainage from the project site and onto adjacent properties; within shoreline areas; into aquatic areas; or onto steep slopes or other erosion hazard areas.

M. All fill is prohibited except the minimum amount required for existing permitted or proposed allowed uses.

N. All permitted fill shall require a conditional use permit or substantial development permit depending on the shoreline designation.

14.15.240 Forest Management

A. Forest management includes all practices related to the growing, harvesting, or processing of timber as defined in RCW 76.09.020.11. Forest management activities on private timberland in the shoreline jurisdiction shall be governed by the following state regulatory laws as amended:

1. Forest Practices Act RCW 76.09;
2. Stewardship of Nonindustrial Forests and Woodlands RCW 76.13;
3. Forest and Fish Law.

B. All forest practices in the shorelines in Okanogan County shall be conducted as to assure no net loss of ecological function.

C. Buffer widths for forest management activities in all shoreline jurisdictions shall be consistent with WAC 222-30-22 as amended.

D. Forest practice conversions and other Class IV-General forest practices where there is a likelihood of conversion to nonforest uses, shall be subject to specific use regulations in this chapter and new uses must be compatible with the shoreline designation to assure no net loss of shoreline ecological functions and shall maintain the ecological quality of the watershed's hydrologic system.

E. With respect to timber located in shorelines of statewide significance only selective harvesting may occur and no more than thirty percent of the merchantable trees may be harvested in any ten year period of time: PROVIDED, That other timber harvesting methods may be permitted in those limited instances where the topography, soil conditions or silviculture practices necessary for regeneration render selective logging ecologically detrimental: PROVIDED FURTHER, That clear cutting of timber which is solely incidental to the preparation of land for other uses authorized by this chapter may be permitted.

F. Lands designated as "forest lands" pursuant to RCW 36.70A.170 shall be deemed consistent with either the "natural," "rural conservancy," or "conservancy" designation.

14.15.250 Industrial Uses

A. Industrial developments permitted in shoreline areas are, in descending order of preference:

1. Water-dependent uses;
2. Water-related uses;
3. Water-enjoyment uses; and
4. Non-water-oriented uses

B. New non-water-oriented industrial development shall be prohibited in all shoreline designations except when:

1. The use is part of a mixed-use project that includes water-dependent uses and provides a significant public benefit with respect to the Shoreline Management Act's objectives such as providing public access and ecological restoration; or
2. Navigability is severely limited at the proposed site; and the industrial use provides a significant public benefit with respect to the Shoreline
Management Act's objectives such as providing public access and ecological restoration.

3. In areas designated or zoned for industrial use, non-water-oriented industrial uses may be allowed if the site is physically separated from the shoreline by another property or public right of way.

C. The Administrator shall require and use the following information in his or her review of industrial development proposals:

1. Consistency with local comprehensive plans and zoning;
2. Specific nature of the industrial activity;
3. Need for shoreline frontage;
4. Provisions for public visual and/or physical access to the shoreline;
5. Provisions to ensure that the development will not result in loss of shoreline functions or reduction in shoreline values;
6. Measures for enhancing the relationship of the use to the shoreline, including aesthetics and landscaping; and
7. The Shoreline Inventory and Characterization and accompanying maps.

D. Where industrial development is allowed, it shall be located, designed, or constructed in a manner that assures no net loss of shoreline ecological functions and such that it does not have significant adverse impacts to other shoreline resources and values.

E. Industrial development shall be designed and maintained in a neat, orderly, and environmentally-compatible manner, consistent with the character and features of the surrounding area. To that end, the Administrator may, following a public hearing, adjust the project dimensions and increase required setbacks established in 14.15.120(E) and/or prescribe reasonable use-intensity and screening conditions. Need and special considerations for landscaping and buffer areas shall also be subject to review and approval.

F. New over-water construction for industrial uses is prohibited unless it can be shown to be essential to a water-dependent industrial use.

G. All loading and service areas shall be located on the upland (landward) side of the industrial facility or provisions shall be made to separate and screen the loading and service areas from the shoreline, unless such provisions are infeasible due to the specific nature of the water-dependent industrial use or the proposed circulation poses a safety hazard to existing traffic patterns.

H. Industrial development on private and public lands shall consider incorporating public access as mitigation for impacts to shoreline resources and values unless public access cannot be provided in a manner that does not result in significant interference with operations or hazards to life or property, as provided in WAC
2743 173-26-221(4).
I. Industrial developments shall be landscaped to visually enhance the shoreline area and contribute to shoreline functions and values, using primarily native, self-sustaining vegetation. Plants from the recommended list (Appendix H) are preferred. Plants that may compromise shoreline values shall be prohibited. The permit application submittal shall identify the size, location, and species of plants that will be used.

J. Drainage and surface runoff from industrial developments shall be controlled so that pollutants will not be carried into water bodies.

14.15.260 Mining

A. Mineral prospecting and placer mining are allowed subject to compliance with the current edition of the Washington State Department of Fish and Wildlife’s Gold and Fish pamphlet. This provision does not apply to mining that meets the definition of a substantial development (See 14.15.090).

B. All surface mining shall be conducted in strict conformance with the Washington State Surface Mining Reclamation Act, Chapter 78.44 RCW. Surface mining permits shall be coordinated with state and federal permits.

C. Mining not meeting the definition of mineral prospecting or placer mining shall require a conditional use permit in the conservancy and rural resource designation.

D. In all shoreline designations, mining shall only be allowed by Conditional Use Permit and only when the proposed mine site has been identified as a mineral land of long term commercial significance.

E. Mining waterward of the ordinary high water mark

1. Mining waterward of the ordinary high-water mark shall not be permitted unless:

   i. Removal of specified quantities of sand and gravel or other materials at specific locations will not adversely affect the natural processes of gravel transportation for the river system as a whole; and

   ii. The mining and any associated permitted activities will not have significant adverse impacts to habitat for priority species nor cause a net loss of ecological functions of the shoreline.

2. The determinations required by Section 14.15.260(E)(1), above, shall be made consistent with RCW 90.58.100(1) and WAC 173-26-201 (2)(a) and shall be integrated with required SEPA review.
3. In considering renewal, extension or reauthorization of gravel bar and other in-channel mining operations in locations where they have previously been conducted, local government shall require compliance with the provisions of 14.15.260(F) and 14.15.260(G) to the extent that no such review has previously been conducted. Where there has been prior review, local government shall review previous determinations comparable to the requirements of this section to assure compliance with the provisions of Section 14.15.260(G) under current site conditions.

4. The provisions of this section do not apply to dredging of authorized navigation channels when conducted in accordance with WAC 173-26-231 (3)(f).

F. The Administrator shall require and use the following information in his or her review of mining proposals (except mineral prospecting and placer mining):

5. Materials to be mined;
6. Need for those materials;
7. Need for shoreline location;
8. Quantity of materials to be mined, by type;
9. Quality of materials to be mined, by type. For certain minerals, an evaluation by a geologist licensed under the provisions of RCW 18.220 may be required;
10. Mining technique and equipment to be used;
11. Depth of overburden and proposed depth of mining;
12. Lateral extent and depth of total mineral deposit;
13. Cross section diagrams indicating present and proposed elevations and/or extraction levels;
14. Existing drainage patterns, seasonal or continuous, and proposed alterations thereof including transport and deposition of sediment and channel changes that may result;
15. Proposed means of controlling surface runoff and preventing or minimizing erosion and sedimentation including impacts to banks on both sides of the excavation;
16. The location and sensitivity of any affected critical conservation areas;
17. Subsurface water resources and aquifer recharge areas, including origin, depth, and extent;
18. Quality analysis of overburden, excavation materials, and tailings, with plans for storage, use, or disposition;
19. Mining plan and scheduling, including seasonal, phasing, and daily operation schedules;
20. Reclamation plan that meets the requirements of this master program and Chapter 78.44 RCW (for surface mining operations only);
21. Screening, earthen berm buffering, and/or fencing plans; and
22. Impacts to aquatic and shoreline habitat.

G. Mining operations (except mineral prospecting and placer mining) shall be sited, designed, conducted, and completed (including reclamation) to ensure no net loss of shoreline ecological functions, including watershed-scale functions and cumulative impacts. A reclamation plan prepared by a qualified professional and providing for restoration of slope stability, water conditions, safety conditions, and, where relevant, vegetative cover shall be required for any new mining and associated activities. Meeting the “no net loss” standard shall include avoidance and mitigation of adverse impacts during the course of mining and reclamation, and shall be based on an evaluation of the final reclamation required for the site. Preference shall be given to mining proposals that result in the creation, restoration, or enhancement of habitat for priority species. The proposed subsequent use of mined property must be consistent with the provisions of the shoreline designation in which the property is located. Performance security requirements are as follows:

1. Surface mining operations must comply with the relevant performance security requirements of RCW 78.44.
2. A public or governmental agency shall not be required to post performance security.
3. All other approved mining operations shall be required to post performance security in an amount adequate to complete reclamation, based on an approved reclamation plan.

H. Mining operations shall comply with all local, state, and federal water quality standards and pollution control laws. Operations shall use effective techniques to prevent or minimize surface water runoff, erosion and sedimentation; prevent reduction of natural flows; protect all shoreline areas from acidic or toxic materials; and maintain the natural drainage courses of all streams. Surface water runoff shall be impounded as necessary to prevent accelerated runoff and erosion.

I. Overburden, mining debris, and tailings shall not be placed in water bodies or floodways and shall be stored and protected so as to prevent or minimize erosion or seepage to surface and ground waters.

J. Precautions shall be taken to insure that stagnant or standing water especially that of a toxic or noxious nature does not develop.

K. In no case shall mining operations impair lateral support and thereby result in earth movements extending beyond the boundaries of the site.
L. If substantial evidence indicates that mining operations are causing, or continued
operation would cause, significant and adverse impacts to water quality, habitat,
or any shoreline ecological function, the Administrator shall terminate the
shoreline permit for mining or impose further conditions on the mining operation
to ensure no net loss of shoreline ecological functions.

14.15.270 Municipal Uses (includes all local governments)
Municipal uses are those in support of local government functions and services. For the
purposes of this SMP, recreational uses and utility facilities are excluded.

A. Non-water-dependent municipal uses will be permitted in shoreline areas only
when no other feasible location is available.

B. The Administrator shall require and use the following information in his or her
review of municipal use proposals:

1. Specific nature of the proposed activity;
2. Need for shoreline location;
3. Other locations considered and the reasons for choosing a shoreline site;
4. Provisions for public visual and/or physical access to the shoreline;
5. Provisions to ensure that the development will not result in loss of
shoreline functions or reduction in shoreline values;
6. Measures for enhancing the relationship of the use to the shoreline,
   including aesthetics and landscaping; and
7. The Shoreline Inventory and Characterization and maps developed as part
   of this SMP.

C. Municipal uses shall be designed and maintained in a neat, orderly, and
   environmentally-compatible manner, consistent with the character and features of
   the surrounding area and result in no net loss of shoreline function. To that end,
   the Administrator may, following a public hearing, adjust the project dimensions
   and increase required setbacks established in Table 8.1 and/or prescribe
   reasonable use intensity and screening conditions. Need and special
   considerations for landscaping and buffer areas shall also be subject to review and
   approval.

D. All loading and service areas shall be located on the upland (landward) side of the
   principal structure or provisions shall be made to separate and screen the loading
   and service areas from the shoreline.
E. Municipal uses shall be landscaped to visually enhance the shoreline area and contribute to shoreline functions and values, using primarily native, self-sustaining vegetation. Plants from the recommended list (Appendix H) are preferred. Plants that may compromise shoreline values shall be prohibited. The permit application submittal shall include a landscape plan identifying the size, location, and species of plants that will be used.

F. Drainage and surface runoff from municipal uses shall be controlled so that pollutants will not be carried into water bodies.

G. Public access facilities must be dedicated, improved, and maintained as part of any shoreline municipal use.

14.15.280 Parking

A. Any new parking area in a shoreline area shall directly serve an existing conforming use or authorized shoreline use.

B. All parking shall be prohibited over water.

C. Parking facilities shall prevent surface water runoff from contaminating water bodies, using the best available technology and best management practices, including a maintenance program to assure proper functioning over time of any storm water facilities required to comply with this regulation.

D. New commercial parking facilities, necessary to support an authorized use, in shoreline areas shall be sited and designed to minimize visual, pedestrian, and other transportation network impacts as well as to minimize environmental impact on shoreline resources.

E. Commercial parking facilities shall be adequately screened and landscaped along the waterward side with plants from the recommended list (Appendix H).

F. Parking facilities that will serve more than one use, such as recreational use on weekends and commercial use on weekdays shall be allowed and preferred to single use parking facilities.

G. Parking as a primary use shall be prohibited in all shoreline designations.

14.15.290 Public Access

A. For the purpose of this SMP, local jurisdictions’ comprehensive plans shall be considered the official public access plans.

B. Water-oriented development, uses, and activities shall be designed and operated to avoid unnecessarily impairing or detracting from the public’s physical or visual access to the water and shorelines.
C. Non-water-oriented development, uses, and activities shall be designed and operated to avoid impairing or detracting from the public's physical or visual access to the water and shorelines. This regulation does not apply to exempt single-family residences.

D. Impairment of or detraction from physical and visual public access to the water by exempt single-family residences shall be minimized.

E. The Signage regulations in 14.15.330 of this chapter and the Shoreline Development Standards in 14.15.120(E) have been established in part to prevent impairment of or detraction from visual public access.

F. Provisions for public or community access to the shoreline shall be incorporated into the shoreline development proposal for any action requiring such access unless the applicant demonstrates that such access is infeasible because at least one of the following provisions applies:

1. Unavoidable health or safety hazards to the public exist which cannot be prevented by any practicable means;

2. Inherent security requirements of the use cannot be satisfied through the application of alternative design features or other solutions;

3. Unacceptable environmental harm will result from the public access which cannot be mitigated;

4. Significant undue and unavoidable conflict between the proposed access and adjacent uses would occur and cannot be mitigated;

5. The cost of providing the access or alternative amenity is unreasonably disproportionate to the long-term cost of the proposed development.

6. All reasonable alternatives have been exhausted, including but not limited to:

   a. Regulating access by such means as limiting hours of use to daylight hours;

   b. Designing separation of uses and activities, i.e., fences, terracing, hedges, landscaping, signage, etc;

   c. Provision of an access at a site physically separated from the proposal such as a nearby street end, an off-site view point or trail system.
7. Dedication and improvement of physical public access shall be required as part of all shoreline development by public entities, including local governments, port districts, state agencies, and public utility districts, with the following exceptions:
   a. Where an approved public access plan developed as part of a regulatory licensing process is submitted. Said public access plan must provide adequate public access to the shoreline, based on a needs analysis.
   b. Where more effective public access to the shoreline can be achieved through implementation of the adopted recreation plan of the local government with jurisdiction, the public entity proposing the development may contribute to implementation of the recreation plan in lieu of providing public access on site.

8. Dedication and improvement of public physical access shall be required in all shoreline areas as follows:
   a. As part of all primary utility development. The requirement may be waived where an approved public access plan developed as part of a regulatory licensing process is. Said public access plan must provide adequate public access, based on a needs analysis.

9. Dedication and improvement of public physical access shall be encouraged as part of utility development in all shoreline areas.

14.15.300 Utilities

A. Utilities are transmission, collection, production, or treatment facilities that are generally regional or area wide in scope and provide the primary service to a large area and may or may not be connected directly to the uses along the shoreline. Utilities include primary transmission facilities related to a hydropower and communications, and distribution or collection systems for water, sewer mains, gas and oil pipelines, and wastewater and water treatment plants. On-site utility features serving a shoreline property, such as water, sewer or gas line connections to a residence, are "accessory utilities" and shall be considered a part of the primary use and are subject to the regulations contained in 14.15.150.

B. Utility development shall be located within public rights-of-ways or existing infrastructure corridors whenever possible and be coordinated with government agencies to provide for compatible multiple uses.

C. Utilities shall be located and designed to avoid damage or degradation to shoreline ecological function including wetlands, marshes, bogs and other swamps; important wildlife areas; and other unique and fragile areas.

D. Underwater pipelines which transport material intrinsically harmful to aquatic life or potentially injurious to water quality, including sewer lines, shall be provided with automatic shut off valves at each end of the underwater segments.
E. Sites disturbed for utility installation shall be stabilized during and immediately following construction to avoid adverse impacts from erosion and shoreline ecological function, including protection of water quality using Best Management Practices.

F. Sites disturbed for utility installation shall be replanted using native species from the recommended list (Appendix H), with a diversity and type similar to or better than that which originally occurred on the site. Questions about appropriate diversity, plant type, and plant species shall be directed to agencies with expertise, such as the departments of Ecology and Fish and Wildlife.

G. The placing of utility lines shall not obstruct or hinder physical or visual access to shoreline areas from public right-of-ways or public use areas. Utilities shall be placed landward of the primary structural setback requirements found in 14.15.120(E). Compliance with local health district standards for the placement of onsite sewer systems shall be indicated on pre-application drawings. If feasible, aboveground lines shall be placed underground. Where lines must be placed aboveground, consideration shall be given to the maintenance of trees in the vicinity of the lines, and the utility line located to eliminate the need for topping or pruning trees.

H. Except where no other feasible alternative exists, utilities that require continued maintenance and therefore disrupt ecological processes (i.e. electrical transmission lines that require removal of undergrowth) shall not be placed in Vegetation Conservation areas (between OHWM and structure setback).

I. Where no other feasible alternative exists or the alternative would result in unreasonable and disproportionate cost, bridges, utility lines, and other public utility and transportation structures may be allowed within the channel migration zone or floodway. Where such structures are allowed, mitigation shall address impacted functions and processes throughout the affected water body, including effects upstream and downstream of the project site, and shall be adequate to ensure no net loss of shoreline ecological function.

14.15.310 Recreational Uses

A. Shoreline recreational development is given priority and is primarily related to access to, enjoyment and use of the water and shorelines of the state.

B. State-owned shorelines are particularly adapted to providing ecological study areas and other recreational uses for the public and shall be given special consideration when developing recreational uses in shoreline areas.

C. The location, design and operation of publicly-owned shoreline recreational developments shall be primarily related to access, enjoyment and use of the water and shorelines of the state, consistent with the comprehensive plan and recreation plan of the local government with jurisdiction. All such uses shall not result in a net loss of shoreline function.
D. Commercial recreational development shall comply with the provisions for commercial development 14.15.210.

E. Substantial accessory use facilities, such as rest rooms, access roads, and parking facilities in shorelines are not a preferred use and shall be allowed only as necessary to support an authorized use, and shall be set back from the ordinary high water mark as specified in the Development Standards Table 14.15.120(E), unless it can be shown that such facilities are water dependent and the planned location will not adversely affect shoreline functions. Such facilities may be linked to the shoreline by walkways.

F. Shoreline recreational developments shall maintain, and, when feasible, enhance or restore desirable shoreline features including those that contribute to shoreline ecological functions and processes, scenic vistas, and aesthetic values. Removal of healthy native vegetation to enhance views shall be discouraged.

G. Recreational uses shall be designed to complement their environment and surrounding land and water uses.

H. No recreational buildings or structures shall be built over water, other than water-dependent and/or public access structures such as piers, docks, bridges, boardwalks, or viewing platforms.

I. Each development proposal shall include a landscape plan that uses native, or native compatible self-sustaining vegetation. Removal of on-site native vegetation shall be limited to the minimum necessary for the permitted development or structures.

J. For recreational uses such as golf courses or parklands that require the use of fertilizers, pesticides, or other chemicals, the applicant shall specify the methods that will be used to ensure that the use complies with all provisions of this master program, including preventing the chemicals from entering adjacent water bodies or wetlands. Chemical-free buffer strips may be required at the discretion of the Administrator.

K. Recreational uses shall provide facilities for non-motorized access to the shoreline, such as pedestrian and bicycle paths, where those facilities will not result in loss of shoreline ecological functions.

L. Recreational uses shall include adequate provisions for water supply, sewage, garbage disposal, and fire protection.

M. Recreational development shall include adequate provisions, such as screening, buffer strips, fences, and signs, to buffer adjacent private property and natural areas and protect the value and enjoyment of those sites.

N. Trails and paths on steep slopes shall be located, designed, and maintained to protect bank stability.
Recreational uses shall be consistent with local comprehensive plan provisions and zoning regulations.

**14.15.320 Residential Development**

A. No lot shall be created that would not accommodate a reasonable use of the lot, based on the zoning district, comprehensive plan designation and critical conservation areas regulations, that meets the minimum building setback and other standards for the shoreline designation in which the lot is located.

B. Plats and subdivisions must be designed, configured and developed in a manner that assures that no net loss of ecological functions results from the plat or subdivision at full build-out of all lots.

C. Plats and subdivisions shall prevent the need for new shoreline stabilization or flood hazard reduction measures that would cause significant impacts to other properties or public improvements or a net loss of shoreline ecological functions.

D. Implement the provisions of WAC 173-26-211 and 173-26-221.

E. In its review of proposals for multi-lot and or multi-unit subdivisions and/or planned developments and other large developments, Okanogan County or the city or town with jurisdiction shall require and use information about the impacts of the proposed development on shoreline ecological functions, including the cumulative impacts of exempt uses and activities within the development over time, and ensure there will be no net loss of shoreline function.

F. No development designed for human habitation (e.g. houseboats, floating homes or cantilever type construction) is permitted on or over water.

**14.15.330 Signage**

The following provisions apply to any commercial or advertising sign directing attention to a business, professional service, community, site, facility, or entertainment; and to temporary and interpretive signs. Highway, public information, and temporary signs are addressed in the Use Chart.

A. All signs shall comply with applicable regulations of Okanogan County or the city or town in which the sign is located and any other applicable regulations (e.g., Scenic Vistas Act).

B. Signs shall be designed and placed so that they are compatible with the aesthetic quality of the existing shoreline and adjacent land and water uses. Except as necessary for safe navigation, moorage, or public safety signs shall be located landward of the required building setback.

C. All signs shall be located and designed to minimize interference with vistas, viewpoints, and visual access to the shoreline.
D. No signs shall be placed on trees or other natural features that will permanently damage or kill tree or feature.

E. Off-premises and non-appurtenant signs shall not be permitted, with the following exception: temporary signs and interpretive signs related to shoreline uses and ecological functions shall be allowed where they comply with the other policies of this SMP and, in the case of temporary signs, where adequate provisions are made for timely removal.

F. No sign shall have a surface area larger than 36 square feet.

G. Lighting of signs shall be prohibited unless the sign is necessary for safe navigation, moorage, or public safety. On-demand lighting shall be used whenever feasible.

14.15.340 Transportation

Transportation development serving non-water dependent uses should avoid the shoreline area where possible to avert damage to shoreline ecological function. Transportation development serving water oriented and water related uses shall be considered as part of that use and subject to the following provisions:

A. Plan, locate, and design proposed transportation and parking facilities where routes will have the least possible adverse effect on unique or fragile shoreline features, will not result in a net loss of shoreline ecological functions or adversely impact existing or planned water-dependent uses.

1. Design of roadways through shoreline areas should occupy the least narrow horizontal profile possible to convey traffic in a safe manner measured from ditch to ditch or shoulder to shoulder (whichever is largest) to minimize the footprint of roadway.

2. Storm water runoff from roadways should be contained using Best Management Practices

3. De-icing, salting, and graveling of roads should be conducted in accordance with best management practices.

4. Surfacing materials should not input or erode sediment into waterways.

B. Transportation and parking plans and projects shall be consistent with the master program public access policies, public access plan, and environmental protection provisions.

C. Circulation system planning shall include integrated corridors for pedestrian, bicycle, and public transportation where appropriate. Circulation planning and projects should support existing and proposed shoreline uses that are consistent with the master program.
D. Where no other feasible alternative exists or the alternative would result in unreasonable and disproportionate cost, bridges, utility lines, and other public utility and transportation structures may be allowed within the channel migration zone or floodway. Where such structures are allowed, mitigation shall address impacted functions and processes throughout the affected water body, including effects upstream and downstream of the project site, and shall be adequate to ensure no net loss of shoreline ecological function.

14.15.350 Shoreline Stabilization

A. New development shall be located and designed to avoid the need for future shoreline stabilization to the extent feasible. New development that would require shoreline stabilization which causes significant impacts to adjacent or downstream properties and shoreline areas shall not be allowed.

B. Emergency construction may be permitted subject to WAC 173-27-040(2)(d) (“Developments exempt from substantial development permit requirement”), when, as determined by Okanogan County Emergency Services life and/or property is in danger. Emergency construction must be consistent with the policies of chapter 90.58 RCW and this master program. Prior to emergency construction, the landowner must agree that, upon abatement of the emergency situation any new structure shall be removed or any permit which would have been required, absent an emergency, pursuant to chapter 90.58 RCW, WAC 173-27, or this master program, obtained.

C. New structural stabilization measures shall not be allowed except to protect an existing primary structure or for the restoration of ecological functions except when all of the conditions below apply:

i. New or enlarged structural shoreline stabilization measures for an existing primary structure, including residences, shall not be allowed unless there is conclusive evidence, documented by a geotechnical analysis that the structure is in danger from shoreline erosion caused by tidal action, currents, or waves. Normal sloughing, erosion of steep bluffs, or shoreline erosion itself, without a scientific or geotechnical analysis, is not demonstration of need. The geotechnical analysis shall evaluate on-site drainage issues and address drainage problems away from the shoreline edge before considering structural shoreline stabilization;

ii. Nonstructural measures, planting vegetation or installing on-site drainage improvements are not feasible or not sufficient;

iii. The erosion control structure will not result in a net loss of shoreline ecological functions.

D. Use of shoreline stabilization measures to create usable land is prohibited including creation of new lots that will require shoreline stabilization in order to allow development.
E. New non-water-dependent development, including exempt and non-exempt single-family residences, that include structural shoreline stabilization shall not be allowed unless all of the following conditions apply:

1. The need for shoreline stabilization is to protect the development from destruction due to erosion caused by natural processes, such as currents and waves; This is demonstrated through a geotechnical report; and

2. The erosion is not being caused by upland conditions, such as drainage and the loss of vegetation; and

3. Non-structural measures (such as placing the development farther from the shoreline), vegetative methods, or installing on-site drainage, are not feasible or not sufficient; and

4. The stabilization will not result in a net loss of shoreline ecological functions.

F. An existing shoreline stabilization structure may be replaced with a similar structure if there is a demonstrated need to protect principal uses or structures from erosion caused by currents or waves.

1. The replacement structure should be designed, located, sized, and constructed to assure no net loss of ecological functions.

2. Replacement walls or bulkheads shall not encroach waterward of the ordinary high-water mark or existing structure unless the residence was occupied prior to January 1, 1992, and there is overriding safety or environmental concerns. In such cases, the replacement structure shall abut the existing shoreline stabilization structure.

3. Soft shoreline stabilization measures that provide restoration of shoreline ecological functions may be permitted waterward of the ordinary high-water mark.

4. For purposes of this section standards on shoreline stabilization measures, "replacement" means the construction of a new structure to perform a shoreline stabilization function of an existing structure which can no longer adequately serve its purpose. Additions to or increases in size of existing shoreline stabilization measures shall be considered new structures.

G. A geotechnical report prepared to address the need to prevent potential damage to a primary structure shall address a local jurisdiction’s standards for a critical area habitat management report for geologically hazardous areas.

H. Geotechnical reports that address the need to prevent potential damage to a primary structure shall address the necessity for shoreline stabilization by estimating time frames and rates of erosion and report on the urgency associated with the specific situation.

I. Hard armoring solutions shall not be authorized except when a geotechnical
report confirms that there is a significant possibility that the primary structure will be damaged within three years as a result of shoreline erosion in the absence of hard armoring measures, or where waiting until the need is that immediate, would foreclose the opportunity to use measures that avoid impacts on ecological functions. Where the geotechnical report confirms a need to prevent potential damage to a primary structure, but the need is not as immediate as the three years, the report may still be used to justify more immediate authorization to protect against erosion using soft measures.

J. Shoreline stabilization shall not be allowed for new uses if it would cause a net loss of shoreline ecological functions on the site, or within the watershed; or if it would cause significant ecological impacts to adjacent properties or shoreline areas. Those impacts include accelerated erosion of adjacent properties caused by the stabilization measures.

K. New uses, including exempt uses, in areas above unstable slopes and moderately unstable slopes shall be set back sufficiently to ensure that shoreline stabilization will not be needed during the life of the structure, as demonstrated by a geotechnical analysis.

L. Where structural shoreline stabilization measures are shown to be necessary, the extent of the stabilization measures shall be limited to the minimum necessary.

M. Stabilization measures shall be designed to minimize harm to and as much as possible restore ecological functions. Lost functions shall be mitigated to ensure no net loss of shoreline ecological functions. Soft approaches shall be used unless demonstrated to be insufficient to protect the primary structure or structures.

N. Where stabilization is necessary to alleviate erosion caused by removal of vegetation, vegetative stabilization measures shall be the only stabilization measures allowed. See Section 14.15.130.

O. Where feasible, ecological restoration and public access improvements shall be incorporated into public projects. Publicly financed or subsidized shoreline erosion control measures shall not restrict appropriate public access to the shoreline, except where such access is determined to be infeasible because of incompatible uses, safety, security, or harm to ecological functions.

P. All applicable federal, state, and local permits shall be obtained and complied with in the construction of shoreline stabilization measures. All permits must be issued before any stabilization work takes place.

Q. Dikes/levees, breakwaters, groins and jetties shall require a conditional use permit.
R. When any structural shoreline stabilization measures are demonstrated to be necessary, pursuant to above provisions.

1. Mitigate new erosion control measures, including replacement structures, on feeder bluffs or other actions that affect beach sediment-producing areas to avoid, and if that is not possible, to minimize adverse impacts to sediment conveyance systems. Where sediment conveyance systems cross jurisdictional boundaries, the County will assist in coordinating shoreline management compliance efforts.

14.15.360 Table 11: Use and Activity Table

| A | Allowed – requires exemption\(^\text{15}\); or, Substantial Development depending on fair market value and/or intensity of use or activity, or designation-specific requirements |
| SDP | Shoreline Substantial Development Permit required |
| SCUP | Shoreline Conditional Use Permit required |
| X | Prohibited use |
| S | Same as in adjacent shoreline designation landward of the OHWM (applicable to areas designated Aquatic only) |
| N/A | Not Applicable |
| (−) | Subject to limitations |
| (+) | Subject to conditions |
| (*) | Subject to exceptions |

(a) In the event that there is a conflict between the use(s) identified in Table 11 and the policies or regulations in this Shoreline Master Program, the policies and regulations shall apply.
(b) Aquatic: Water-dependent use only, subject to the use and development regulations of the abutting upland shoreline area designation.

\(^{15}\) - Exempt uses and activities are defined by statute, see definitions in 14.15.090.

which may require a SUBSTANTIAL DEVELOPMENT permit.

19 Clearing and grading that is not part of an allowed and permitted shoreline use shall require a conditional use permit except on properties physically separated from the shoreline by another property or public right of way.

20 Restoration and enhancement projects may require a Substantial Development Permit.
Article IV    Shoreline Designation Regulations

14.15.370 Aquatic Designation

A. Purpose
Protect, restore, and manage the unique characteristics and resources of areas waterward of the Ordinary High Water Mark (OHWM).

B. Criteria
All shorelines areas waterward of the OHWM of rivers, lakes and streams shall be designated “Aquatic.”

C. Permitted Uses
The following uses may be permitted subject to the applicable policies and regulations of this Program:

1. Permitted uses consist of the water-dependent uses permitted in abutting upland shoreline area designations, subject to the exceptions listed in SMP 14.15.570.

D. Conditional Uses
The following may be permitted as conditional uses subject to the applicable policies and regulations of this Program:

1. Conditional uses consist of those water-dependent conditional uses designated in abutting upland shoreline area designations.
2. Bioengineering approaches shall require a conditional use permit.
3. Water-dependent commercial development
4. Public Highway, Safety, Directional and Informational signs
5. Primary and accessory utilities
6. Water-dependent industrial development
7. Filling
8. Dredging and material disposal
9. Shoreline Stabilization

E. Prohibited Uses
The following uses are prohibited:

1. Agriculture
2. Forest Management
3. Non-water dependent, water-related/water-enjoyment Commercial uses
4. Non-water dependent, water-related Industrial uses
5. Clearing and grading
14.15.380 Conservancy Designation

A. Purpose

Protect ecological functions and conserve existing natural resources and valuable historic and cultural areas in places where the shoreline is performing an important, irreplaceable function or ecosystem-wide process, even though it is partially developed or supporting human use.

B. Conservancy Designation Criteria

A.1. The shoreline is currently performing an important, irreplaceable function or ecosystem-wide process, even though partially developed or supporting human use; and

B.2. The shoreline is either publicly owned; or covered by a conservation easement or is in platted common area; or subject to severe access limitation or other environmental limitations that render it unsuitable for development; and

C.3. The shoreline is either currently supporting lesser-intensity resource-based uses, such as agriculture, forestry, or recreational uses, or is designated agricultural or forest lands pursuant to RCW 36.70A.170; or of high recreational value or with unique historic or cultural resources.

C. Permitted Uses

The following uses may be permitted subject to the applicable policies and regulations of this Program:

1. Accessory utilities serving permitted uses are allowed subject to a substantial development permit.

2. Agriculture shall be limited to those practices which do not require extensive alteration of the physical characteristics of the shoreline area.

3. Grazing and watering of livestock is allowed.

4. Those agricultural practices are permitted which are in effect at the time of the adoption of this ordinance.

5. Agricultural structures shall be subject to the same development standards as residential development, see 14.15.120(E), including the requirement for a Conditional Use Permit to construct a non-exempt single-family dwelling (including agricultural workers’ housing).

6. Conversion from non-agricultural land to agricultural land use.

7. All aquaculture upland development and uses shall be permitted only if in compliance with the other applicable sections of this SMP.

8. Forest management

9. Docks
10. Piers
11. Covered Moorage
12. Commercial Wet Moorage
14. Floats
16. Water-oriented, water-related and water-dependent recreational uses shall require a substantial development permit and are subject to the development standards set forth in 14.15.120(E).
17. Commercial and public highway, safety, directional and informational signs.
18. Exempt and non-exempt single family dwellings.
19. Accessory utilities
20. Filing
21. Clearing and grading
22. Bulkheads
23. Bioengineering shoreline stabilization
24. Shoreline restoration and enhancement

D. Conditional Uses
The following may be permitted as conditional uses subject to the applicable policies and regulations of this Program:
1. Public and commercial boat launch ramps
2. Water-dependent and water-related/water-enjoyment commercial uses
3. Surface and other mining
4. Multi-family residential development
5. Dikes/levees
6. Breakwaters, groins, and jetties
7. Dredging and material disposal.
8. Industrial uses shall require a conditional use permit.
9. Primary utilities
10. High Intensity recreational uses.
11. Hard shoreline stabilization approaches shall require a conditional use permit.
12. Railroads
E. Prohibited Uses

The following uses are prohibited:

1. Feed lots and animal feeding operations
2. Non-water oriented commercial development
3. Marinas
4. Boat lifts
5. Commercial boat launch ramps
6. Commercial dry boat storage
7. Private boat launches

14.15.390 Natural Designation

D.A. Purpose

Provide the highest level of protection to shoreline areas that are relatively free of human influence or that include intact or minimally degraded shoreline functions intolerant of human use.

E.B. Criteria

A.1. The shoreline is ecologically intact and therefore currently performing an important, irreplaceable function or ecosystem-wide process that could be damaged by development over time;

B.2. The shoreline is considered to represent ecosystems and geologic types that are of particular scientific and educational interest or are rare or fragile (for instance, an outcropping that contains fragile plant communities); or

C.3. The shoreline is unable to support new development or uses without significant adverse impacts to ecological functions or risk to human safety.

D.4. Such shorelines include largely areas such as wetlands, unstable bluffs, islands, and ecologically intact shoreline habitats. Shorelines inside or outside incorporated municipalities and Urban Growth Areas (UGAs) may be designated as "Natural."

F.C. Permitted Uses

The following uses may be permitted subject to the applicable policies and regulations of this Program:

1. Agriculture shall be limited to those practices which do not require extensive alteration of the physical characteristics of the shoreline area.
2. Grazing and watering of livestock is allowed.
3. Those agricultural practices are permitted which are in effect at the time of the adoption of this ordinance.
4. Agricultural buildings shall be subject to the same development standards as residential development, see Section 14.15.120(E), including the requirement for a Conditional Use Permit to construct a non-exempt single-family dwelling (including agricultural workers’ housing).

5. Conversion from non-agricultural land to agricultural land use.

6. Aquaculture small accessory structures (not greater than 64 sq. feet) shall be allowed as a water-related structure, located no closer than the applicable Zone 1 Vegetative Buffer distance.

7. All other aquaculture upland development and uses shall be permitted only if in compliance with the other applicable sections of this SMP.

8. Archaeological, Cultural, Educational, Historic and Scientific uses are allowed with a substantial development permit.

9. Mooring buoys/float plane moorage accessory to permitted moorage

10. Floats

11. Clearing and grading

12. Bulkheads

13. Bioengineering shoreline stabilization

14. Shoreline restoration and enhancement

15. Roads

16. Mineral prospecting and placer mining

17. Low Intensity/passive recreational uses shall require a substantial development permit and are subject to the development standards set forth in 14.15.120(E).

18. Public Highway, safety, directional and informational signs

G.D. Conditional Uses

The following may be permitted as conditional uses subject to the applicable policies and regulations of this Program:

1. Accessory utilities serving permitted uses are allowed subject to a conditional use permit.

2. Agricultural buildings shall be subject to the same development standards as residential development, see 14.15.120(E), including the requirement for a Conditional Use Permit to construct a non-exempt single-family dwelling (including agricultural workers’ housing).

3. Public and commercial boat launch ramps.

4. Primary utilities

5. High intensity recreational uses

6. Forest management
7. Industrial uses
8. Non-exempt and exempt single family dwelling
9. Multi-family dwellings
10. Bioengineering and hardening shoreline stabilization
11. Dikes/leves
12. Breakwaters, groins and jetties
13. Dredging and material disposal
14. Filing
15. Railroads

H.E. Prohibited Uses
The following uses are prohibited:
1. Feed lots and animal feeding operations
2. Marinas
3. Moorage facilities
4. Covered moorage (e.g., boat garages)
5. Commercial wet moorage
6. Commercial dry boat storage
7. Boat lifts
8. Private boat launch ramps
9. Mining is prohibited
10. Commercial development
11. Industrial development
12. Parking as a primary use
13. Piers and docks
14. Commercial signs

14.15.400 Riverine/Lacustrine Designation
E.A. Purpose
Protect shoreline areas that include intact or minimally degraded shoreline functions while allowing for continuation of lesser-intensity resource-based uses and for water-oriented recreational uses.

E.B. Criteria
A. The shoreline may or may not be ecologically intact; and
B. The shoreline is currently performing an important, irreplaceable function or ecosystem-wide process that could be damaged by intensive development or activity.

C. The shoreline is unable to support intensive development or uses without significant adverse impacts to ecological functions or risk to human safety; and

D. The shoreline is privately owned; and

E. The shoreline is currently supporting lesser-intensity resource-based uses, such as agriculture, forestry, or recreational uses, or is designated agricultural or forest lands pursuant to RCW 36.70A.170; or

G.C. Permitted Uses

The following uses may be permitted subject to the applicable policies and regulations of this Program:

1. Accessory utilities serving permitted uses are allowed subject to a substantial development permit.
2. Grazing and watering of livestock is allowed.
3. Those agricultural practices are permitted which are in effect at the time of the adoption of this ordinance.
4. Conversion of non-agricultural lands to agriculture uses and activities shall require a substantial development permit.
5. Agricultural structures shall be subject to the same development standards as residential development, see 14.15.120(E), including the requirement for a Conditional Use Permit to construct a non-exempt single-family dwelling (including agricultural workers’ housing).
6. All aquaculture upland development and uses shall be permitted only if in compliance with the other applicable sections of this SMP.
7. Archaeological, Cultural, Educational, Historic and Scientific uses are allowed with a substantial development permit in all shoreline designations.
8. Forest Management
9. Docks
10. Mooring buoys/float plane moorage accessory to permitted moorage.
11. Floats
12. Mineral prospecting and placer mining
13. Low-intensity recreational uses
14. Public highway, safety, directional and informational signs.
15. Exempt and Non-exempt single family dwellings.
16. Accessory utilities
17. Clearing and grading
18. Bulkheads
19. Bioengineering shoreline stabilization
20. Shoreline restoration and enhancement
21. Roads

### Conditional Uses

The following may be permitted as conditional uses subject to the applicable policies and regulations of this Program:

1. Primary utilities
2. Commercial and Public boat launch ramps
3. Primary utilities
4. Industrial development
5. Dikes/levees
6. Breakwaters, groins and jetties
7. Dredging and material disposal
8. Filling
9. High intensity recreation uses
10. Hardening and structural shoreline stabilization approaches shall require a conditional use permit.
11. Railroads

### Prohibited Uses

The following uses are prohibited:

1. Feed lots and animal feeding operations
2. Marinas
3. Piers
4. Covered moorage
5. Commercial wet moorage
6. Commercial dry boat storage
7. Boat lifts
8. Private boat launch ramps
9. Commercial development
10. Parking as a primary use
11. Bulkheads and revetments shall be prohibited.
12. Mining
13. Commercial signs

14.15.410 Rural Residential Designation

F. A. Purpose
To accommodate more intensive residential development in areas outside of UGAs that have been developed, planned and platted for such development; and to provide appropriate public access and recreational uses.

G. B. Criteria
1. Assigned to shoreline areas outside Urban Growth Areas that support a predominance of single-family residential development, are platted for residential development, or are planned for residential development at densities exceeding 1 dwelling unit per five acres

H. C. Permitted Uses
The following uses may be permitted subject to the applicable policies and regulations of this Program:
1. Accessory utilities serving permitted uses are allowed subject to a substantial development permit.
2. All types of agricultural activities are allowed except those activities listed in 14.15.610
3. Conversion of non-agricultural lands to agriculture uses and activities shall require a substantial development permit.
4. Agricultural structures shall be subject to the same development standards as residential development, 14.15.120(E), including the requirement for a Conditional Use Permit to construct a non-exempt single-family dwelling (including agricultural workers’ housing).
5. Archaeological, Cultural, Educational, Historic and Scientific uses are allowed with a substantial development permit in all shoreline designations.
6. Forest management
7. Public and commercial boat launch ramp shall require a substantial development permit
8. Commercial development is allowed with a substantial development permit provided such development is consistent with local zoning regulations or directly related to an existing conforming or permitted agricultural, recreational or residential use and be subject to the development standards set forth in 14.15.120(E).
A-a. Commercial development shall be water dependent or water-oriented except as allowed in 14.15.210(C).

A-b. Commercial development shall be consistent with local comprehensive plan provisions and zoning regulations.

9. Mineral prospecting and placer mining
10. All recreational uses are allowed with a substantial development permit and are subject to the development standards set forth in 14.15.120(E).
11. Subdivisions (both short and long) shall be subject to a substantial development permit and require the division to be processed as a planned development under local zoning and platting regulations.
12. Commercial and public highway, safety, directional and informational signs
13. Bioengineering shoreline stabilization approaches shall require a substantial development permit.

14. Marinas
15. Piers
16. Docks
17. Covered moorage
18. Commercial wet moorage
19. Commercial dry boat storage
20. Mooring buoys/float plane moorage accessory to permitted moorage
21. Floats
22. Residential development
23. Accessory utilities
24. Filling
25. Clearing and grading
26. Bioengineered shoreline stabilization
27. Bulkheads
28. Shoreline restoration and enhancement
29. Roads

D. Conditional Uses

The following may be permitted as conditional uses subject to the applicable policies and regulations of this Program:

1. Dikes/levees
2. Breakwaters, groins, and jetties
3. Moorage facilities
14.15.420 Rural Resource Designation

C.A. Purpose
Protect ecological functions, conserve existing natural resources, and provide for public safety while accommodating existing and planned rural development patterns

D.B. Criteria
1. Shoreline areas outside incorporated municipalities and outside urban growth areas, as defined by RCW 36.70A.110, where any of the following characteristics apply:
   2. The shoreline is currently accommodating agricultural and/or residential uses or is planned for such use and is outside any incorporated city, town, or urban growth area; or
   3. The shoreline is presently supporting human uses and has few environmental limitations

E.C. Permitted Uses
The following uses may be permitted subject to the applicable policies and regulations of this Program:

A.1. Accessory utilities serving permitted uses are allowed subject to a substantial development permit.

B.2. All types of agricultural activities are allowed.
C. Animal feedlots are permitted provided:
   a. Applicable state (Chapter 90.48 RCW) and federal regulations (EPA) for CAFOs and AFOs are met.
   b. There exists a minimum of the required Zone 1 and Zone 2 buffer or 100 feet (no buffer reduction allowed for this use) of vegetated area between the lot and the ordinary high water mark.

D. Conversion of non-agricultural lands to agriculture uses and activities shall require a substantial development permit.

E. Agricultural structures shall be subject to the same development standards as residential development, Section 14.15.120(E), including the requirement for a Conditional Use Permit to construct a non-exempt single-family dwelling (including agricultural workers’ housing).

F. All aquaculture uses require a shoreline substantial development permit.

G. Archaeological, Cultural, Educational, Historic and Scientific uses

H. Forest management activities

I. Public and commercial boat launch ramps are allowed subject to a substantial development permit.

J. Moorage buoys/float plan moorage accessory to permitted moorage

K. High intensity and low intensity recreational uses

L. All outdoor advertising, signs and billboards

M. Water-dependent and water-related/water-enjoyment commercial development shall be allowed subject to a substantial development permit and the development standards set forth in 14.15.120(E).

N. Mineral prospecting and placer mining

O. High intensity recreational uses shall require a substantial development permit and are subject to the development standards set forth in 14.15.120(E).

P. Commercial and public highway, safety, directional and informational signs

Q. Bioengineering shoreline stabilization approaches shall require a substantial development permit.

R. All residential uses

S. Marinas

T. Piers

U. Docks

V. Floats
W.  Covered moorage
X.  Commercial wet moorage
Y.  Filling
Z.  Clearing and grading
AA. Bulkheads
BB. Shoreline restoration and enhancement
CC. Roads

F.D. Conditional Uses
The following may be permitted as conditional uses subject to the applicable policies and regulations of this Program:
1. Primary utilities
2. Industrial development shall be allowed by conditional use permit subject to the provisions of 14.15.250 and the development standards set forth in 14.15.120.
3. Boat lifts
4. Mining shall be allowed subject to a Conditional Use Permit.
5. Mining shall be allowed subject to a Conditional Use Permit.
6. Primary utilities

G.E. Prohibited Uses
The following uses are prohibited:
A. Private boat launch ramps
B. Non-water oriented commercial development
C. Commercial dry boat storage

14.15.430 Shoreline Recreation Designation
DD.A. Purpose
To accommodate mixed-use recreation-oriented development that is consistent with the goals and purpose of the Shoreline Management Act; and to provide appropriate public access and recreational uses, especially where those uses are part of a master-planned system and support healthy physical activity.

EE.B. Criteria
Assigned to shoreline areas within or in close proximity to Urban Growth Areas that support or are planned for mixed-use recreation oriented development. The designation will provide flexibility for water oriented mixed-use development with densities exceeding 1 dwelling unit per acre.
Permitted Uses

The following uses may be permitted subject to the applicable policies and regulations of this Program:

1. Accessory utilities serving permitted uses are allowed subject to a substantial development permit.
2. Bioengineering shoreline stabilization approaches shall require a substantial development permit.
3. All types of agricultural activities are allowed except activities listed in 14.15.710
4. Agricultural structures shall be subject to the same development standards as residential development, Section 14.15.120(E), including the requirement for a Conditional Use Permit to construct a non-exempt single-family dwelling (including agricultural workers’ housing).
5. Forest Management
6. Archaeological, Cultural, Educational, Historic and Scientific uses are allowed with a substantial development permit in all shoreline designations.
7. Marinas
8. Piers
9. Docks
10. Covered moorage
11. Commercial wet moorage
12. Commercial dry boat storage
13. Floats shall be allowed subject to a shoreline substantial development permit.
14. Boat lifts shall be allowed subject to a shoreline substantial development permit.
15. Public and commercial boat launch ramps shall be allowed subject to a substantial development permit
16. Mooring buoys/float plane moorage shall be allowed subject to a shoreline substantial development permit.
17. Water-dependent and Water-related/water-enjoyment commercial development is allowed with a substantial development permit provided such development is consistent with local zoning regulations or directly related to an existing conforming or permitted agricultural, recreational or residential use and be subject to the development standards set forth in section 14.15.120(E).
18. Mineral prospecting and placer mining
19. Water-dependent and water-related industrial development is allowed with a substantial development permit provided such development is directly related to an existing conforming or permitted agricultural or industrial use and be subject to the development standards set forth in 14.15.120(E).

20. Filling
21. Clearing and grading
22. Bulkheads
23. Shoreline restoration and enhancement
24. Roads
25. High intensity recreational uses shall require a substantial development permit
26. Low intensity recreational uses
27. Commercial and public highway, safety, directional and informational signs

**GG.D.** Conditional Uses
The following may be permitted as conditional uses subject to the applicable policies and regulations of this Program:

1. Primary utilities
2. Non-water oriented industrial uses
3. Dikes/levees
4. Breakwaters, groins, and jetties
5. Hardened shoreline stabilization

**HH.E.** Prohibited Uses
The following uses are prohibited:

**14.15.440 Shoreline Residential Designation**

**D.A.** Purpose
To accommodate residential development and appurtenant structures that are consistent with the goals and purpose of the Shoreline Management Act; and to provide appropriate public access and recreational uses.

**E.B.** Criteria
Assigned to shoreline areas within incorporated municipalities or UGAs that support a predominance of single-family residential development with some duplex and multi-family, are platted for residential development, or are planned for residential development exceeding 1 dwelling unit per acre.
Permitted Uses

The following uses may be permitted subject to the applicable policies and regulations of this Program:

1. Accessory utilities serving permitted uses are allowed.
2. Primary utilities are allowed subject to a substantial development permit.
3. All types of agricultural activities are allowed except activities listed in 14.15.440(E).
4. Archaeological, Cultural, Educational, Historic and Scientific uses are allowed with a substantial development permit in all shoreline designations.
5. Forest management.
6. Moorage facilities shall be allowed subject to a shoreline substantial development permit.
7. Mooring buoys/float plane moorage shall be allowed subject to a shoreline substantial development permit.
8. Floats shall be allowed.
9. Boat lifts are allowed subject to a shoreline substantial development permit.
10. Public and commercial boat launch ramps are allowed subject to a shoreline substantial development permit.
11. Water-dependent and Water-related/water-enjoyment commercial development is allowed with a substantial development permit provided such development is consistent with local zoning regulations or directly related to an existing conforming or permitted agricultural, recreational or residential use and be subject to the development standards set forth in section 14.15.120(E).
12. Water-dependent and water-related industrial development is allowed with a substantial development permit subject to the provisions of section 14.15.250 and the development standards set forth in 14.15.120(E).
13. Mineral Prospecting and placer mining are allowed.
14. High intensity recreational uses are allowed with a substantial development permit and are subject to the development standards set forth in 14.15.120(E).
15. Low intensity recreational uses.
16. Subdivisions (both short and long) shall be subject to a substantial development permit.
17. Commercial and public highway, safety, directional and informational signs.
18. Bioengineering shoreline stabilization approaches shall require a
substantial development permit.
19. Marinas
20. Piers
21. Docks
22. Covered moorage
23. Commercial wet moorage
24. Residential development, non-exempt single family, and multi-family
dwellings are allowed with a substantial development permit.
25. Filling
26. Clearing and grading
27. Bulkheads
28. Shoreline restoration and enhancement
29. Roads

G.D. Conditional Uses
The following may be permitted as conditional uses subject to the applicable
policies and regulations of this Program:
1. Dikes/levees
2. Breakwaters, groins, and jetties
3. Dredging and material disposal
4. Hardened shoreline stabilization
5. Railroads
6. Non-water oriented industrial development

H.E. Prohibited Uses
The following uses are prohibited:
1. Feedlots
2. Aquaculture
3. Non-water oriented commercial development
4. Commercial dry boat storage
5. Private boat launch ramps
6. Parking as a primary use
7. Mining
14.15.450 Urban Conservancy Designation

A. Purpose

Protect and restore ecological functions of open space, floodplains, and other sensitive lands within incorporated municipalities or Urban Growth Areas, while allowing a variety of compatible uses.

B. Criteria

E.1. Areas within UGAs that are suitable and planned primarily for public development that is compatible with maintaining or restoring the ecological functions of the area, and are not generally suitable for water-dependent uses, if any of the following characteristics apply:

a. They are suitable for water-related or water-enjoyment uses;

b. They are publically-owned open space, flood plain or other sensitive areas that may be suited for low levels of development associated with water-related or water-enjoyment uses but are unsuitable for high intensity development;

c. They have potential for ecological restoration; or

d. They retain important ecological functions (such as riparian or wetland habitat, buffers, storm water and wastewater abatement, and open space) even though partially developed.

C. Permitted Uses

The following uses may be permitted subject to the applicable policies and regulations of this Program:

A.1. Accessory utilities serving permitted uses are allowed

B.2. All types of agricultural activities are allowed except activities listed in 14.15.860

C.3. Agricultural structures shall be subject to the same development standards as residential development, 14.15.120(E) including the requirement for a Conditional Use Permit to construct a non-exempt single-family dwelling (including agricultural workers’ housing).

D.4. All aquaculture uses require a shoreline substantial development permit.

E.5. Archaeological, Cultural, Educational, Historic and Scientific uses are allowed with a substantial development permit in all shoreline designations.

E.6. Forest management uses require a shoreline substantial development permit.

G.7. Public and commercial boat launch ramps

H.8. Water-dependent and Water-related/water-enjoyment commercial
development is allowed with a substantial development permit provided such development is consistent with local zoning regulations or directly related to an existing conforming or permitted agricultural, recreational or residential use and be subject to the development standards set forth in section 14.15.120(E).

I.9. Water-dependent and water-related industrial development is allowed with a substantial development permit subject to the provisions of section 14.15.250 and the development standards set forth in 14.15.120(E).

I.10. Mineral prospecting and placer mining are allowed

K.11. Marinas

L.12. Piers

M.13. Docks

N.14. Covered moorage

O.15. Commercial wet moorage

P.16. Mooring buoys/float plane moorage accessory to permitted moorage

Q.17. Floats

R.18. High intensity recreational uses are allowed with a substantial development permit and are subject to the development standards set forth in 14.15.120(E).

S.19. Low intensity recreational uses are allowed

T.20. Commercial and public highway, safety, directional and informational signs are allowed subject to the provisions of 14.15.330.

U.21. Residential development is allowed non-exempt single family and multi-family dwellings are allowed with a substantial development permit.

V.22. Filling

W.23. Clearing and grading

X.24. Bulkheads

Y.25. Bioengineering shoreline stabilization approaches shall require a substantial development permit.

Z.26. Shoreline restoration and enhancement

AA.27. Roads

D. Conditional Uses

The following may be permitted as conditional uses subject to the applicable policies and regulations of this Program:

1. Primary utilities

2. Non water oriented industrial development
3. Dikes/levees
4. Breakwaters, groins and jetties
5. Dredging and material disposal
6. Hardening shoreline stabilization
7. Railroads

E. Prohibited Uses
The following uses are prohibited:
1. Feedlots
2. Non-water oriented commercial development
3. Private boat launch ramps
4. Mining
5. Parking as a primary use

Article V Administration

14.15.460 Minimum Application Requirements

A. Where other approvals or permits are required for a use or development that does not require an open record hearing, such approvals or permits shall not be granted until a shoreline approval or permit is granted. All shoreline approvals and permits shall include written findings prepared by the Administrator documenting compliance with bulk and dimensional standards and other policies and regulations of this Program.

B. A complete application for a substantial development, conditional use, or variance permit shall contain, at a minimum, the following information; provided that the Administrator may vary or waive these requirements according to administrative application requirements and may vary or waive these requirements on a case-by-case basis. The Administrator may require additional specific information depending on the nature of the proposal and the presence of sensitive ecological features or issues related to compliance with other county requirements.

1. Applicant/Proponent Information
   a. The name, address and phone number of the applicant/proponent, applicant’s representative, agent on behalf of the owner, and/or property owner if different from the applicant/proponent.
   b. The applicant/proponent should be the owner of the property or the primary proponent of the project and not the representative of the owner or primary proponent.
2. Property Information

a. The property address and identification of the section, township and range to the nearest quarter, quarter section or latitude and longitude to the nearest minute. All applications for projects located in open water areas away from land shall provide a longitude and latitude location.

b. Identification of the name of the shoreline (water body) that the site of the proposal is associated with and the shoreline designation.

c. A general description of the property as now exists including its use, physical and ecological characteristics, existing improvements and existing structures.

d. A general description of the vicinity of the proposed project including identification of the adjacent uses, structures and improvements, intensity of development and physical characteristics.

e. A vicinity map showing the relationship of the property and proposed development or use to roads, utilities, existing developments and uses on adjacent properties.

3. A site plan identifying existing conditions consisting of photographs, text, maps and elevation drawings, drawn to an appropriate scale to clearly depict all required information, that shall include:

a. The boundary of the parcel(s) of land upon which the development is proposed. A survey may be required where substantial questions exist regarding the location of property lines or other important features.

b. The ordinary high water mark of all water bodies located adjacent to or within the boundary of the project. This may be an approximate location provided, that for any development where a determination of consistency with the applicable regulations requires a precise location of the ordinary high water mark the mark shall be located precisely and the biological and hydrological basis for the location as indicated on the plans shall be included in the development plan. Where the ordinary high water mark is neither adjacent to or within the boundary of the project, the plan shall indicate the distance and direction to the nearest ordinary high water mark of a shoreline.

c. Existing and proposed land contours. The contours shall be at intervals sufficient to accurately determine the existing character of the property and the extent of proposed change to the land that is necessary for the development. Areas within the boundary that will not be altered by the development may be indicated as such and contours approximated for that area.
d. Existing critical conservation areas as designated in 14.15.110 together with any supporting information consistent with the reporting requirements of 14.15.460(C).

e. A general indication of the character of vegetation found on the site.

f. The dimensions and locations of all existing and proposed structures and improvements including but not limited to; buildings, paved or graveled areas, roads, utilities, septic tanks and drain fields, material stockpiles or surcharge, and storm water management facilities.

g. A delineation of all wetland areas that will be altered or used as a part of the development.

h. Where applicable, landscaping plans for the project.

i. Where applicable, plans for development of areas on or off the site as mitigation for impacts associated with the proposed project shall be included and contain information consistent with the requirements of this section.

j. Quantity, source and composition of any fill material that is placed on the site whether temporary or permanent.

k. Quantity, composition and destination of any excavated or dredged material.

l. A vicinity map showing the relationship of the property and proposed development or use to roads, utilities, existing developments and uses on adjacent properties.

m. Where applicable, a depiction of the impacts to views from existing residential uses and public areas.

n. Where applicable, critical area habitat management report and mitigation plans in accordance with Chapter 8 sections 14.15.460(C) and 14.15.460(D).

o. On all variance applications the plans shall clearly indicate where development could occur without approval of a variance, the physical features and circumstances on the property that provide a basis for the request, and the location of adjacent structures and uses.

4. A site plan identifying existing conditions consisting of photographs, text, maps and elevation drawings, drawn to an appropriate scale to clearly depict all required information, that shall include:

5. Operation and maintenance plan(s) as required pursuant to other applicable sections of this program.
C. When a Critical Areas Report/Habitat Management Plan is required, “At a minimum, the report shall contain the following:

1. The name and contact information of the applicant, a description of the proposal, and identification of the permit requested;

2. A copy of the site plan for the development proposal including: A map to scale depicting critical conservation areas, buffers, the development proposal, and any areas to be cleared; and a description of the proposed storm water management plan for the development and consideration of impacts to drainage alterations.

3. The dates, names, and qualifications of the persons preparing the report and documentation of any fieldwork performed on the site; Public docks are constructed and utilized for use by the general public, typically owned and managed by a public agency and may include a boat ramp.

4. Identification and characterization of all critical conservation areas, wetlands, water bodies, and buffers 200 feet from adjacent to the proposed project area;

5. A statement specifying the accuracy of the report, and all assumptions made and relied upon;

6. An assessment of the probable cumulative impacts to critical conservation areas resulting from development of the site and the proposed development;

7. An analysis of site development alternatives including a no development alternative;

8. A description of reasonable efforts made to apply mitigation sequencing to avoid, minimize, rectify, reduce and mitigate impacts to critical conservation areas;

9. Plans for adequate mitigation, as needed, to offset any impacts, in accordance with Mitigation Plan Requirements 14.15.460(D), including, but not limited to: The impacts of any proposed development within or adjacent to a critical conservation area or buffer on the critical conservation area; and The impacts of any proposed alteration of a critical conservation area or buffer on the development proposal, other properties and the environment;

10. A discussion of the performance standards including monitoring applicable to the critical conservation area and proposed activity;

11. Financial guarantees to ensure compliance; and

12. Any additional information required for the critical area conservation area as specified in the corresponding chapter.
D. When a Mitigation Management Plan is required the plan shall include the following:

1. “Mitigation plan” shall include a written report identifying environmental goals and objectives of the compensation proposed and including:

   a. A description of the anticipated impacts to the critical area and the mitigating actions proposed and the purposes of the compensation measures, including the site selection criteria; identification of compensation goals; identification of resource functions; and dates for beginning and completion of site compensation construction activities. The goals and objectives shall be related to the functions and values of the impacted critical area;

   b. A review of the best available science the most current, accurate, and complete scientific and technical information supporting the proposed mitigation and a description of the report author’s experience to date in restoring or creating the type of critical area proposed; and

   c. An analysis of the likelihood of success of the compensation project.

   d. The mitigation plan shall include measurable specific criteria for evaluating whether or not the goals and objectives of the mitigation project have been successfully attained and whether or not the requirements of this Title have been met.

   e. The mitigation plan shall include written specifications and descriptions of the mitigation proposed, such as: The proposed construction sequence, timing, and duration; Grading and excavation details; Erosion and sediment control features; A planting plan specifying plant species, quantities, locations, size, spacing, and density; and Measures to protect and maintain plants until established. These written specifications shall be accompanied by detailed site diagrams, scaled cross-sectional drawings, and topographic maps showing slope percentage and final grade elevations, and any other drawings appropriate to show construction techniques or anticipated final outcome.
14.15.470 Pre-application Conference

A. Prior to filing a permit application for a shoreline substantial development permit, variance or conditional use permit decision, the applicant shall contact the county to schedule a pre-application conference which shall be held prior to filing the application, provided that such meetings may not be required for exempt shoreline development activities associated with shoreline restoration projects, agriculture, commercial forestry, or the construction of a single family residence according to exemptions listed in 14.15.570.

B. The purpose of the pre-application conference is to review and discuss the application requirements with the prospective applicant and provide initial comments on the development proposal. The pre-application conference shall be scheduled by the county, at the request of an applicant, and shall be held in a timely manner, within thirty (30) days from the date of the applicant's request.

C. Information presented at or required as a result of the pre-application conference shall be valid for a period of one-hundred-eighty (180) days following the pre-application conference. An applicant wishing to submit a permit application more than one-hundred-eighty (180) days following a pre-application for the same permit application shall be required to schedule another pre-application conference.

D. At or subsequent to a pre-application conference, the county may issue a preliminary determination that a proposed development is not permissible under applicable county policies or regulatory enactments. In that event, the applicant shall have the option to appeal the preliminary determination to the Board of Adjustment as provided for in 14.15.600. As an alternative to proceeding with a complete application.

14.15.480 Plan Review

A. A plan review shall be conducted to determine if the application is complete. Plan review shall determine if adequate information is provided in or with the application in order to begin processing the application and that all required information and materials have been supplied in sufficient detail to begin the application review process. All information and materials required by the application form must be submitted. All studies supporting the application or addressing projected impacts of the proposed development must be submitted.

B. The purpose of the plan review is to ensure adequate information is contained in the application materials to demonstrate consistency with this Program, applicable comprehensive plans, development regulations and other applicable regulations. Department staff will coordinate the involvement of agencies responsible for the review of the proposed development.
14.15.490 Application Vesting

A. An application shall become vested on the date a determination of completeness is made. Thereafter the application shall be reviewed under the codes, regulations and other laws in effect on the date of vesting; provided, in the event an applicant substantially changes his/her proposed development after a determination of completeness, as determined by the department, the application shall not be considered vested until a new determination of completeness on the changes is made.

14.15.500 Notice of Application

A. Within fourteen days after issuing a determination of completeness, the department shall issue a notice of application. The notice shall include, but not be limited to the following:

1. A description of the proposed project action, a list of permits and decisions (i.e. SEPA) required for the application, and if applicable, a list of any studies requested;
2. The identification of other required permits not included in the application, to the extent known by the department;
3. The identification of existing environmental documents which evaluate the proposed development and the location where the application and any studies can be reviewed;
4. A statement of the public comment period, which shall be thirty days following the date of the notice of application, and a statement of the right of any person to comment on the application, receive notice of and participate in any hearings, and request a copy of the decision once made, and a statement of any appeal rights;
5. The date, time, location and type of hearing, if applicable and scheduled at the date of the notice of application;
6. Any other information determined by the department to be appropriate.

B. Informing the public

1. The notice of application shall be mailed to the latest recorded real property owners as shown by the records of the county assessor within at least three hundred feet of the boundary of the property upon which the development is proposed;
In addition to mailing the notice of application, the Administrator may require the notice to be posted on the subject property for the duration of the public comment period, where the Administrator finds that such additional notice may be of benefit for the public. The applicant shall be responsible for posting and maintaining the posting throughout the entire public comment period. The applicant shall obtain the notice of application sign(s) from the department upon payment of all applicable fees. The sign location and condition shall be the responsibility of the applicant until the sign(s) are returned to the department. After the public comment period, the applicant shall sign an affidavit of posting before a notary public, using the form adopted by the department, and file the affidavit of posting with the department, together with a photograph of the notice of application sign(s) posted at the site. Any necessary replacement of the notice of application sign(s) and post(s) shall be the sole responsibility of the applicant.

C. The notice of application is not a substitute for any required notice of a public hearing.

D. A State Environmental Policy Act (SEPA) threshold determination may be issued for a proposal concurrent with the notice of application.

E. Notice of application and SEPA determination will be published in the Okanogan County official newspaper of record.

**14.15.510 Limited Administrative Review**

A. Limited administrative review shall be used when the proposed development is subject to clear, objective and nondiscretionary standards that require the exercise of professional judgment about technical issues and the proposed development is exempt from the State Environmental Policy Act (SEPA). Included within this type of review are those projects that qualify for an exemption under 14.15.570(B) which do not require a letter of exemption. The Department may approve, approve with conditions, or deny the application after the date the application is accepted as complete, without public notice. The decision of the Department is final. There is no administrative appeal of a limited administrative review decision.
Full Administrative Review

BB-A. Full administrative review shall be used when the proposed development is subject to objective and subjective standards that require the exercise of limited discretion about non-technical issues and about which there may be limited public interest. The proposed development may or may not be subject to SEPA review. Included within this type of review are applications for, shoreline exemptions which require a letter of exemption, shoreline substantial development permits, shoreline conditional use permits, shoreline variance permits, short subdivisions, multifamily, commercial, and industrial and/or office building permits.

CC.B. This review procedure under full administrative review shall be as follows:

1. Upon the completion of the public comment period and the comment period required by SEPA, if applicable, the department may approve, approve with conditions, or deny the application. The department shall mail the notice of decision to the applicant and all parties of record. The decision shall include:

   a. A statement of the applicable criteria and standards in the development codes and other applicable law;

   b. A statement of the findings of the review authority, stating the application’s compliance or noncompliance with each applicable criterion, and assurance of compliance with applicable standards;

   c. The decision to approve or deny the application and, if approved, conditions of approval necessary to ensure the proposed development will comply with all applicable laws;

   d. A statement that the decision is final unless appealed as provided in 14.15.600(A) of this Program. The appeal closing date shall be listed. The statement shall describe how a party may appeal the decision.

   e. A statement that the complete case file, including findings, conclusions and conditions of approval, if any, is available for inspection. The notice shall list the name and telephone number of the department’s representative to contact to arrange inspection.

   f. The decision may be appealed to the Board of Adjustment or City Council pursuant to the process established in 14.15.600(A) of this Program.
14.15.530 Quasi-judicial review of applications

A. Quasi-judicial review shall be used when the development or use proposed under the application requires a public hearing before a hearing body. This type of review shall be used for shoreline conditional use permits, shoreline variances, shoreline substantial development permits and other similar applications.

B. The review procedure under quasi-judicial review shall be as follows:

1. A quasi-judicial review process requires an open record public hearing before the appropriate hearing body.

2. The public hearing shall be held after the completion of the public comment period and the comment period required by SEPA, if applicable.

3. At least ten days before the date of a public hearing the department shall issue public notice of the date, time, location and purpose of the hearing.

4. At least ten days before the date of the public hearing, the department shall issue a written staff report, integrating the SEPA review and threshold determination and recommendation regarding the application(s), shall make available to the public a copy of the staff report for review and inspection, and shall mail a copy of the staff report and recommendation to the applicant or the applicant’s designated representative. The Department shall make available a copy of the staff report, subject to payment of a reasonable charge, to other parties who request it.

5. Public hearings shall be conducted in accordance with the rules of procedure adopted by the hearing body. A public hearing shall be recorded. If for any reason, the hearing cannot be completed on the date set in the public notice, it may be continued during the public hearing to a specified date, time and location, without further public notice required.

6. Within ten working days after the hearing body adopts their final decision, the hearing body shall issue a written decision regarding the application(s).

7. The hearing body may approve, approve with conditions or deny the application and shall mail the notice of its decision to the department, applicant, the applicant’s designated representative, the property owner(s), and any other parties of record. The decision shall include:

   a. A statement of the applicable criteria, standards and law;

   b. A statement of the findings of fact the hearing body made showing the proposal does or does not comply with each applicable approval criterion and assurance of compliance with applicable standards;

   c. A statement that the decision is final unless appealed pursuant to section 14.15.600 of this Program. The appeal closing date shall be listed;
14.15.540 Legislative review of applications

A. Legislative review shall be used to review and amend this master program.

B. Legislative review shall be conducted as follows:

1. Legislative review requires at least one public hearing before the planning commission and one public meeting before the Legislative authority of the jurisdiction.

2. The application shall contain all information and material requirements required by the appropriate application form.

3. At least ten days before the date of the first planning commission hearing the department shall issue public notice of the date, time, location and purpose of the hearing. The notice shall include notice of the SEPA threshold determination issued by the department.

4. At least ten days prior to the hearing the Department shall issue a written staff report, integrating the SEPA review and threshold determination and recommendation regarding the application(s), shall make available to the public a copy of the staff report for review and inspection, and shall mail a copy of the staff report and recommendation to the applicant or the applicant’s designated representative, and planning commission members. The Department shall make available a copy of the staff report, subject to a reasonable charge, to other persons who request it.

5. Following the public hearing and in accordance with RCW 36.70.630, the recommendation of the planning commission shall be forwarded to the legislative authority of the jurisdiction. Upon receiving the recommendation from the planning commission, the legislative authority shall set a public meeting to consider the proposal, at which the board may either accept or reject the recommendation.

6. The legislative authority must hold a public hearing to consider any changes to the recommendation of the planning commission. The legislative authority may approve, approve with conditions, deny or remand the proposal back to the planning commission for further review after such public hearing. The final decision of the legislative authority shall be adopted by resolution.

7. The final decision of the legislative authority shall be in writing and include:

   a. A statement of the applicable criteria and law;

   b. A statement of the findings indicating the application’s or proposed development’s compliance or noncompliance with each applicable approval criterion;

   c. The decision to approve condition or reject the planning commission recommendation or remand for further review;
A statement that the decision is final unless appealed pursuant to the process in 14.15.600 of this Program. The appeal closing date shall be listed.

e. A statement that the complete case file, including findings, conclusions and conditions of approval, if any, is available for inspection. The notice shall state the name and telephone number of the department representative to contact.

14.15.550 Notice of final decision

A. A notice of final decision on an application shall be issued within one hundred twenty days after the date of the declaration of completeness. In determining the number of days that have elapsed, the following periods shall be excluded:

1. Any period during which the applicant has been requested by the department to correct plans, perform required studies, or provide additional information or materials. The period shall be calculated from the date the department issues the request to the applicant to, the earlier of, the date the Department determines whether the additional information satisfies its request or fourteen days after the date the information has been received by the Department;

2. If the department determines the information submitted by the applicant under 14.15.460 of this Section is insufficient, it shall again notify the applicant of deficiencies, and the procedures of this Section shall apply to the request for information;

3. Any period during which an environmental impact statement (EIS) is being prepared following a determination of significance pursuant to RCW 43.21C;

4. Any period for administrative appeals.

5. Any extension of time mutually agreed upon by the applicant and the Department.

B. The time limit by which the jurisdiction must issue a notice of final decision does not apply if an application:

1. Requires an amendment to a comprehensive plan or development regulation;

2. Is substantially revised by the applicant after a determination of completeness has been issued, in which case the time period shall start from the date on which the revised project application is determined to be complete.
C. If the Department is unable to issue its final decision within the time limits provided for in this Chapter, it shall provide written notice of this fact to the applicant. The notice shall include a statement of reasons why the time limits have not been met and an estimated date for issuance of the notice of final decision.

D. In accordance with state law, the local jurisdiction is not liable for damages which may result from the failure to issue a timely notice of final decision.

E. The local jurisdiction shall file the final decision with the Department of Ecology in accordance with WAC 173-27-130, as amended.

14.15.560 Shoreline Substantial Development Permits

A. A Shoreline Substantial Development Permit shall be required for all development of shorelines, unless the proposal is specifically exempt per Section 14.15.570(B).

B. In order to be approved, the decision maker must find that the proposal is consistent with the following criteria:

1. All regulations of this Program appropriate to the shoreline designation and the type of use or development proposed shall be met, except those bulk and dimensional standards that have been modified by approval of a shoreline variance under Section 14.15.590.

2. All policies of this Program appropriate to the shoreline area designation and the type of use or development activity proposed shall be considered and substantial compliance demonstrated.

C. The responsible local government may attach conditions to the approval of permits as necessary to assure consistency of the project with the Act and this SMP.

14.15.570 Exemptions from Shoreline Substantial Development Permit Process

A. Application and Interpretation

1. An exemption from the substantial development permit process is not an exemption from compliance with the Act or this Program, or from any other regulatory requirements. To be authorized, all uses and developments must be consistent with the policies and regulatory provisions of this Program and the Act.

2. Exemptions shall be construed narrowly. Only those developments that meet the precise terms of one or more of the listed exemptions may be granted exemptions from the substantial development permit process.
3. The burden of proof that a development or use is exempt is on the applicant/proponent of the exempt development action.

4. If any part of a proposed development is not eligible for exemption, then a substantial development permit is required for the entire project.

5. A development or use that is listed as a conditional use pursuant to this Program, must obtain a conditional use permit even if the development or use does not require a substantial development permit.

6. A development or use that is an unlisted use, must obtain a conditional use permit even if the development or use does not require a substantial development permit.

7. When a development or use is proposed that does not comply with the bulk, dimensional and/or performance standards of the Program, such development or use shall only be authorized by approval of a shoreline variance even if the development or use does not require a substantial development permit.

8. All permits or statements of exemption issued for development or use within shoreline jurisdiction shall include written findings prepared by the Administrator, including compliance with bulk and dimensional standards and policies and regulations of this Program. The Administrator may attach conditions to the approval of exempt developments and/or uses as necessary to assure consistency of the project with the Act and the Program.

B. Exemptions Listed from WAC 173.27.040

1. Any development of which the total cost or fair market value, whichever is higher, does not exceed five thousand seven hundred eighteen dollars ($5,718) or as amended by the state office of financial management, if such development does not materially interfere with the normal public use of the water or shorelines of the state. For the purposes of determining whether or not a permit is required, the total cost or fair market value shall be based on the value of development that is occurring on shorelines of the state as defined in RCW 90.58.030(2)(c). The total cost or fair market value of the development shall include the fair market value of any donated, contributed or found labor, equipment or materials.
2. Normal maintenance or repair of existing structures or developments, including damage by accident, fire or elements. Normal maintenance includes those usual acts to prevent a decline, lapse or cessation from a lawfully established condition. Normal repair means to restore a development to a state comparable to its original condition within a reasonable period after decay or partial destruction except where repair causes substantial adverse effects to the shoreline resource or environment. Replacement of a structure or development may be authorized as repair where such replacement is the common method of repair for the type of structure or development and the replacement structure or development is comparable to the original structure or development including but not limited to its size, shape, configuration, location and external appearance and the replacement does not cause substantial adverse effects to shoreline resources or the environment.

3. Construction of the normal protective bulkhead common to single family residences. A normal protective bulkhead includes those structural and nonstructural developments installed at or near, and parallel to, the ordinary high water mark for the sole purpose of protecting an existing single family residence and appurtenant structures from loss or damage by erosion. A normal protective bulkhead is not exempt if constructed for the purpose of creating dry land. When a vertical or near vertical wall is being constructed or reconstructed, not more than one (1) cubic yard of fill per one (1) foot of wall may be used for backfill. When an existing bulkhead is being repaired by construction of a vertical wall fronting the existing wall, it shall be constructed no further waterward of the existing bulkhead than is necessary for construction of new footings. When a bulkhead has deteriorated such that an ordinary high water mark has been established by the presence and action of water landward of the bulkhead then the replacement bulkhead must be located at or near the actual ordinary high water mark. Beach nourishment and bioengineered erosion control projects may be considered a normal protective bulkhead when any structural elements are consistent with the above requirements and when the project has been approved by the Washington Department of Fish and Wildlife.

4. Emergency construction necessary to protect property from damage by the elements. An emergency is an unanticipated and imminent threat to public health, safety or the environment that requires immediate action within a time too short to allow full compliance with this Program. Emergency construction does not include development of new permanent protective structures where none previously existed. Where new protective structures are deemed by the Administrator to be the appropriate means to address the emergency situation, upon abatement of the emergency situation the new structure shall be removed or any permit that would have been required, absent an emergency, pursuant to RCW 90.58, WAC 173-27 or this Program, shall be obtained. All emergency construction shall be consistent with the policies of RCW 90.58 and this Program. As a general
matter, flooding or other seasonal events that can be anticipated and may occur but that are not imminent are not an emergency.

5. Construction and practices normal or necessary for farming, irrigation, and ranching activities, including agricultural service roads and utilities, construction of a barn or similar agricultural structure, and the construction and maintenance of irrigation structures including, but not limited to, head gates, pumping facilities, and irrigation channels; provided, that this exemption shall not apply to agricultural activities proposed on land not in agricultural use on December 17, 2003, and further provided that a feedlot of any size, all processing plants, other activities of a commercial nature, alteration of the contour of the shorelands by leveling or filling other than that which results from normal cultivation, shall not be considered normal or necessary farming or ranching activities. A feedlot shall be an enclosure or facility used or capable of being used for feeding livestock hay, grain, silage, or other livestock feed, but shall not include land for growing crops or vegetation for livestock feeding and/or grazing, nor shall it include normal livestock wintering operations.

6. Construction or modification, by or under the authority of the Coast Guard or a designated port management authority, of navigational aids such as channel markers and anchor buoys.

7. Construction on shorelands by an owner, lessee, or contract purchaser of a single family residence for their own use or for the use of their family, which residence does not exceed a height of 35 feet above average grade level and that meets all requirements of the State agency or local government having jurisdiction thereof. Single family residence means a detached dwelling designed for and occupied by one (1) family including those structures and developments within a contiguous ownership which are a normal appurtenance as defined in Chapter 2 of this program.
8. Construction of a dock, including a community dock, designed for pleasure craft only, for the private noncommercial use of the owner, lessee, or contract purchaser of single-family and multiple-family residences. A dock is a landing and moorage facility for watercraft and does not include recreational decks, storage facilities or other appurtenances. This exception applies if in fresh waters the fair market value of the dock does not exceed ten thousand dollars ($10,000), but if subsequent construction having a fair market value exceeding two thousand five hundred dollars ($2,500) occurs within five years of completion of the prior construction, the subsequent construction shall be considered a substantial development for the purpose of this Shoreline Master Program.

9. Operation, maintenance, or construction of canals, waterways, drains, reservoirs, or other facilities that now exist or are hereafter created or developed as a part of an irrigation system for the primary purpose of making use of system waters, including return flow and artificially stored ground water from the irrigation of lands;

10. The marking of property lines or corners on state-owned lands, when such marking does not significantly interfere with normal public use of the surface of the water;

11. Operation and maintenance of any system of dikes, ditches, drains, or other facilities existing on September 8, 1975, which were created, developed or utilized primarily as a part of an agricultural drainage or diking system;

12. Any project with a certification from the governor pursuant to chapter 80.50 RCW, Energy Facilities - Site Locations;

13. Site exploration and investigation activities that are prerequisite to preparation of an application for development authorization under this chapter, if:
   a. The activity does not interfere with the normal public use of the surface waters;
   b. The activity will have no significant adverse impact on the environment including but not limited to fish, wildlife, fish or wildlife habitat, water quality, and aesthetic values;
   c. The activity does not involve the installation of any structure, and upon completion of the activity the vegetation and land configuration of the site are restored to conditions existing before the activity;
   d. A private entity seeking development authorization under this section first posts a performance bond or provides other evidence of financial responsibility to the responsible local government to ensure that the site is restored to preexisting conditions; and
The activity is not subject to the permit requirements of RCW 90.58.550, Oil or natural gas exploration in marine waters;

14. The process of removing or controlling aquatic noxious weeds, as defined in RCW 17.26.020, through the use of an herbicide or other treatment methods applicable to weed control that are recommended by a final environmental impact statement published by the department of agriculture or the department of ecology jointly with other state agencies under chapter 43.21C RCW;

15. Watershed restoration projects as defined below. The responsible local government shall review the projects for consistency with the Shoreline Master Program in an expeditious manner and shall issue its decision along with any conditions within forty-five days of receiving all materials necessary to review the request for exemption from the applicant. No fee may be charged for accepting and processing requests for exemption for watershed restoration projects as used in this section.

a. “Watershed restoration project” means a public or private project authorized by the sponsor of a watershed restoration plan that implements the plan or a part of the plan and consists of one or more of the following activities:

i. A project that involves less than ten (10) miles of stream reach, in which less than twenty-five (25) cubic yards of sand, gravel, or soil is removed, imported, disturbed or discharged, and in which no existing vegetation is removed except as minimally necessary to facilitate additional plantings;

ii. A project for the restoration of an eroded or unstable stream bank that employs the principles of bioengineering, including limited use of rock as a stabilization only at the toe of the bank, and with primary emphasis on using native vegetation to control the erosive forces of flowing water; or

iii. A project primarily designed to improve fish and wildlife habitat, remove or reduce impediments to migration of fish, or enhance the fishery resource available for use by all of the citizens of the state, provided that any structure, other than a bridge or culvert or instream habitat enhancement structure associated with the project, is less than two hundred square feet in floor area and is located above the OHWM of the stream.
iv. “Watershed restoration plan” means a plan developed or sponsored by the Washington Departments of Fish and Wildlife, Ecology, or Transportation; a federally recognized Indian tribe acting within and pursuant to its authority; a city; a county; or a conservation district that provides a general program and implementation measures or actions for the preservation, restoration, re-creation, or enhancement of the natural resources, character, and ecology of a stream, stream segment, drainage area, or watershed for which agency and public review has been conducted pursuant to chapter 43.21C RCW, the State Environmental Policy Act.

16. A public or private project that is designed to improve fish or wildlife habitat or fish passage, when all of the following apply:
   a. The project has been approved in writing by the State of Washington department of Fish and wildlife;
   b. The project has received hydraulic project approval by the State of Washington Department of Fish and Wildlife pursuant to chapter 77.55 RCW; and
   c. The responsible local government has determined that the project is substantially consistent with the local shoreline master program. The local government shall make such determination in a timely manner and provide it by letter to the project proponent. Fish habitat enhancement projects that conform to the provisions of RCW 77.55.181 are determined to be consistent with local shoreline master programs.

C. Letters of Exemption

1. Letters of exemption shall be issued whenever a development is determined to be exempt from the substantial development permit requirements pursuant to WAC 173-27-040 and the development is subject to one or more of the following federal permit requirements:
   a. A U.S. Army Corps of Engineers section 10 permit under the Rivers and Harbors Act of 1899; (The provisions of section 10 of the Rivers and Harbors Act generally apply to any project occurring on or over navigable waters. Specific applicability information should be obtained from the Corps of Engineers.) or
b. A section 404 permit under the Federal Water Pollution Control Act of 1972. (The provisions of section 404 of the Federal Water Pollution Control Act generally apply to any project which may involve discharge of dredge or fill material to any water or wetland area. Specific applicability information should be obtained from the Corps of Engineers.)

c. The letter shall indicate the specific exemption provision from WAC 173-27-040 that is being applied to the development and provide a summary of the analysis of the consistency of the project with the master program and the act.

14.15.580 Shoreline Conditional Use Permits

A. Uses specifically classified or set forth in this Shoreline Master Program as conditional uses shall be subject to review and condition by the responsible local government.

B. Other uses which are not classified or set forth in this SMP may be authorized as conditional uses provided the applicant can demonstrate consistency with the requirements of this Section and the requirements for conditional uses contained in this SMP.

C. Uses which are specifically prohibited by this SMP may not be authorized as a conditional use.

D. Conditional Use Permit Review Criteria

1. The purpose of a conditional use permit is to provide a system within the master program which allows flexibility in the application of use regulations in a manner consistent with the policies of RCW 90.58.020. In authorizing a conditional use, special conditions may be attached to the permit by local government or the department to prevent undesirable effects of the proposed use and/or to assure consistency of the project with the act and the local master program.

2. Uses which are classified or set forth in the applicable master program as conditional uses may be authorized provided that the applicant demonstrates all of the following:

   a. That the proposed use is consistent with the policies of RCW 90.58.020 and the master program;

   b. That the proposed use will not interfere with the normal public use of public shorelines;

   c. That the proposed use of the site and design of the project is compatible with other authorized uses within the area and with uses planned for the area under the comprehensive plan and shoreline master program;
d. That the proposed use will cause no significant adverse effects to the shoreline environment in which it is to be located; and

e. That the public interest suffers no substantial detrimental effect.

E. In the granting of all Conditional Use Permits, consideration shall be given to the cumulative impact of additional requests for like actions in the area. For example, if Conditional Use Permits were granted for other developments in the area where similar circumstances exist, the total of the conditional uses shall also remain consistent with the policies of RCW 90.58.020 and shall not produce substantial adverse effects to the shoreline environment.

14.15.590 Shoreline Variance Review Criteria

A. The purpose of a variance is to grant relief to specific bulk or dimensional requirements set forth in this Program and any associated standards appended to this Program such as critical areas, conservation area, buffer requirements where there are extraordinary or unique circumstances relating to the property such that the strict implementation of this Program would impose unnecessary hardships on the applicant/proponent or thwart the policy set forth in RCW 90.58.020. Use restrictions may not be varied.

B. Variance permits should be granted in circumstances where denial of the permit would result in a thwarting of the policy enumerated in RCW 90.58.020. In all instances the applicant must demonstrate that extraordinary circumstances shall be shown and the public interest shall suffer no substantial detrimental effect.

C. Variance permits for development and/or uses that will be located landward of the ordinary high water mark (OHWM), as defined in RCW 90.58.030 (2)(b), and/or landward of any wetland as defined in RCW 90.58.030 (2)(h), may be authorized provided the applicant can demonstrate all of the following:

1. That the strict application of the bulk, dimensional or performance standards set forth in the applicable master program precludes, or significantly interferes with, reasonable use of the property;

2. That the hardship described in (a) of this subsection is specifically related to the property, and is the result of unique conditions such as irregular lot shape, size, or natural features and the application of the master program, and not, for example, from deed restrictions or the applicant's own actions;

3. That the design of the project is compatible with other authorized uses within the area and with uses planned for the area under the comprehensive plan and shoreline master program and will not cause adverse impacts to the shoreline environment;

4. That the variance will not constitute a grant of special privilege not enjoyed by the other properties in the area;
5. That the variance requested is the minimum necessary to afford relief; and
6. That the public interest will suffer no substantial detrimental effect.

D. Variance permits for development and/or uses that will be located waterward of the ordinary high water mark (OHWM), as defined in RCW 90.58.030 (2)(b), or within any wetland as defined in RCW 90.58.030 (2)(h), may be authorized provided the applicant can demonstrate all of the following:

1. That the strict application of the bulk, dimensional or performance standards set forth in the applicable master program precludes all reasonable use of the property;
2. That the proposal is consistent with the criteria established under subsection (2) (b) through (f) of this section; and
3. That the public rights of navigation and use of the shorelines will not be adversely affected.

E. In the granting of all variance permits, consideration shall be given to the cumulative impact of additional requests for like actions in the area. For example if variances were granted to other developments and/or uses in the area where similar circumstances exist the total of the variances shall also remain consistent with the policies of RCW 90.58.020 and shall not cause substantial adverse effects to the shoreline environment.

F. Variances from the use regulations of the master program are prohibited.

14.15.600 Appeals

A. Appeals to Shoreline Administrative Decisions

1. Administrative review decisions by the Administrator, based on a provision of this SMP, may be the subject of an appeal to the Board of Adjustment by any aggrieved person. Such appeals shall be an open record hearing before the Board of Adjustment. Where the responsible local government does not have a Board of Adjustment, the City Council or Board of County Commissioners shall hold an open record hearing appeal. Appeals must be submitted within twenty one (21) days after the date of decision or written interpretation together with the applicable appeal fee. Appeals submitted by the applicant or aggrieved person shall contain:

   a. The decision being appealed;
   b. The name and address of the appellant and his/her interest(s) in the application or proposed development;
   c. The specific reasons why the appellant believes the decision to be erroneous, including identification of each finding of fact, each conclusion, and each condition or action ordered which the appellant alleges is erroneous. The appellant shall have the burden of proving the decision is erroneous;
   d. The specific relief sought by the appellant; and
14.15.610 Reasonable Use Exception

A. If the application of this chapter would result in denial of reasonable and economically viable use of a property, then a landowner may seek a reasonable use exception from the standards of this chapter. Reasonable use exceptions shall only apply to legal lots of record established prior to the effective date of this chapter. Reasonable use exceptions are intended as a "last resort" when no plan for mitigation can meet the requirements of this chapter and allow the applicant a reasonable economically viable use of his or her property. Requests for reasonable use exception shall only be granted under the following conditions:

1. The application of this chapter would deny all reasonable and economically viable or beneficial uses of the property so that there is no reasonable and economically viable or beneficial use with a lesser impact on the critical-conservation area than that proposed; and

2. The proposed development does not pose a reasonable threat to the public health, safety and welfare on or off the site for which the reasonable use exception is sought; and

3. Any proposed modification to a critical-conservation area will be the minimum necessary to allow reasonable and economically viable and beneficial use of the property; and

4. The applicant has requested and been denied a variance under the provisions of Section 14.15590; and

5. The decision maker may issue, as part of the findings in any decision made under this subsection, conditions of approval, including modifications to the size and placement of structures and facilities to minimize impacts to critical areas-conservation areas and associated buffers. As part of the findings, the decision maker may also specify mitigation requirements that ensure that all impacts are mitigated to the maximum extent feasible.
14.15.620 Non-Conforming Structures

A. Non-Conforming Residential Structures considered Conforming when:

1. Residential structures and appurtenant structures that were legally established and are
   used for a conforming use, but that do not meet standards for the following to be
   considered a conforming structure: Setbacks, buffers, or yards; area; bulk; height; or
density, and

2. Redevelopment, expansion, change with the class of occupancy, or replacement of the
   residential structure if it is consistent with the master program, including requirements for
   no net loss of shoreline ecological functions.

3. For purposes of this section, "appurtenant structures" means garages, sheds, and other
   legally established structures. "Appurtenant structures" does not include bulkheads and
   other shoreline modifications or over-water structures.

A.B. Structures that were legally established and are used for a conforming use, but
which are nonconforming with regard to setbacks, buffers or yards; area; bulk;
height or density may be maintained and repaired and may be enlarged or
expanded provided that said enlargement does not increase the extent of
nonconformity by further encroaching upon or extending into areas where
construction or use would not be allowed for new development or uses.

B.C. A structure for which a Variance has been issued shall be considered a legal
nonconforming structure and the requirements of this section shall apply as they
apply to preexisting nonconformities.

C.D. A nonconforming structure which is moved any distance must be brought into
conformance with this SMP and the Act

D.E. If a nonconforming development is damaged within the foundation lines, it
may be reconstructed to those configurations existing immediately prior to the
time the development was damaged, provided that application is made for the
permits necessary to restore the development within one year of the date the
damage occurred, all permits are obtained, and the restoration is completed within
two years of permit issuance.

E.F. Nothing in this section shall be deemed to prevent the normal maintenance
and repair of a nonconforming structure or its restoration to a safe condition when
declared to be unsafe by any official charged with protecting the public safety.

14.15.630 Non-Conforming Uses

A. Uses and developments that were legally established and are nonconforming with
regard to the use regulations of the SMP may continue as legal nonconforming
uses. Such uses shall not be enlarged or expanded, except that nonconforming
single-family residences that are located landward of the OHWM may be
enlarged or expanded in conformance with applicable bulk and dimensional
standards by the addition of space to the main structure or by the addition of
normal appurtenances as defined in 14.15.090(13)

B. An existing use which is listed as a conditional use, but which legally existed
prior to adoption of the SMP or any relevant amendment and which a Conditional
Use Permit has not been obtained, shall be considered a legal nonconforming use and may be continued subject to the provisions of this section without obtaining a conditional use permit.

A structure which is being or has been used for a nonconforming use may be used for a different nonconforming use only upon the approval of a Conditional Use Permit. A Conditional Use Permit may be approved only upon a finding that:

1. No reasonable alternative conforming use is practical; and
2. The proposed use will be at least as consistent with the policies and provisions of the Act and the SMP and as compatible with the uses in the area as the preexisting use. In addition, such conditions may be attached to the permit as are deemed necessary to assure compliance with the above findings, the requirements of the SMP and the Act, and to assure that the use will not become a nuisance or a hazard.

D. If a nonconforming use is discontinued for twelve consecutive months or for twelve months during any two-year period, the nonconforming rights shall expire and any subsequent use shall be conforming. A use authorized pursuant to 14.15.610 of this Section shall be considered a conforming use for purposes of this section.

14.15.640 Non-Conforming Lots

An undeveloped lot, tract, parcel, site, or division of land located landward of the OHWM which was established in accordance with local and state subdivision requirements prior to the effective date of the Act or this SMP, but which does not conform to the present lot size standards, may be developed if permitted by other land use regulations of the responsible local government and so long as such development conforms to all other requirements of this SMP and the Act.

14.15.650 Enforcement

A. If an activity being undertaken on Shorelines of the State is in violation of RCW 90.58 or the local Shoreline Master Program the County shall have the authority to serve upon a person a cease and desist order.

1. The order shall contain the following:

2. A description of the specific nature, extent, and time of violation and the damage or potential damage; and

3. A notice that the violation or the potential violation cease and desist or, in appropriate cases, the specific corrective action to be taken within a given time. A civil penalty under WAC 173-27-280 may be issued with the order.

a. The cease and desist order issued under this section shall become effective immediately upon receipt by the person to whom the order is directed.

b. Failure to comply with the terms of a cease and desist order can result in enforcement actions including, but not limited to, the issuance of a civil penalty.
B. A person who fails to conform to the terms of a substantial development permit, conditional use permit or variance issued under RCW 90.58.140, who undertakes a development or use on shorelines of the state without first obtaining a permit, or who fails to comply with a cease and desist order issued under these regulations may be subject to a civil penalty.

1. The County shall issue a notice of correction containing the following information:
   a. A description of the condition that is not in compliance and a specific citation to the applicable law or rule;
   b. A statement of what is required to achieve compliance;
   c. The date by which compliance shall be achieved;
2. Amount of penalty. The penalty shall not exceed one thousand dollars for each violation.
3. Notice of penalty. A civil penalty shall be imposed by a notice in writing, either by certified mail with return receipt requested or by personal service, to the person incurring the same from the department and/or the local government, or from both jointly. The notice shall describe the violation, approximate the date(s) of violation, and shall order the acts constituting the violation to cease and desist, or, in appropriate cases, require necessary corrective action within a specific time.
4. Application for remission or mitigation. Any person incurring a penalty may apply in writing within thirty days of receipt of the penalty to the County for remission or mitigation of such penalty. Upon receipt of the application, the County may remit or mitigate the penalty only upon a demonstration of extraordinary circumstances, such as the presence of information or factors not considered in setting the original penalty.

C. Appeals to Enforcement Action
1. Persons incurring a penalty imposed by the County may appeal to the Board of Adjustment.
2. Appeals should be filed within 30 days of the notice of penalty or the decision regarding the remission or mitigation by the administrator.
3. Penalties due

a. Penalties imposed under this section shall become due and payable thirty days after receipt of notice imposing the same unless application for remission or mitigation is made or an appeal is filed. Whenever an application for remission or mitigation is made, penalties shall become due and payable thirty days after receipt of the administrator’s decision regarding the remission or mitigation. Whenever an appeal of a penalty is filed, the penalty shall become due and payable upon completion of all review proceedings and upon the issuance of a final decision confirming the penalty in whole or in part.

b. Penalties recovered by the administrator shall be paid to the Okanogan County Treasurer.
